Grand Trunk Ry.—The following station agents have been appointed: South Durham, Que., F. A. Leclerc; Britannia Mills, Que., E. Raboin; Levis, Que., J. L. Mignault; Dominion, Que., R. Young; Aubrey, Que., K. J. Mills; Brockville, Ont., A. E. Parker; Findley, Ont., C. F. Earle; Shannonville, Ont., R. L. Gilligan; Sarnia Tunnel, Ont., J. Simpson; Chatham, Ont., E. W. Bancroft; Vars, Ont., E. Needham; Joe Lake, Ont., F. A. Hawkshaw; Cornwall Jct., Ont., G. E. Macdonald; Sutton, Ont., A. M. Paton; Collingwood, Ont., and Collingwood Wharf, A. M. Durnford; Glencairn, Ont., J. Orr; Avening, Ont., M. Stacey; Bright, Ont., W. A. Blyberg; Kippen, Ont., W. Fasken; Camp Borden, Ont., R. W. Thom; outside agencies, St. John's, Que., C. G. Wilkinson; Brighton, Ont., G. A. L. Thorne; Oshawa, Ont., A. J. Adams; Parry Sound, Ont., G. Moore; Port Hope, Ont., A. Mark.

Traffic Orders by the Board of Railway Commissioners.

Interchange at Battleford.

25076. June 14. Re application of Board of Trade of North Battleford, Sask., for a transfer accommodation at Battleford (old town) between the Canadian Northern Ry. and the Grand Trunk Pacific Ry. It is ordered that the Grand Trunk Pacific Branch Lines Co. be directed to construct a transfer and storage track at Battleford, between the G. T. P. Ry. and the C. N. R., as shown on plan on file with the Board, that the said construction be completed by July 15, 1916; that the G. T. P. B. L. Co. bear four-fifths and the C. N. R. Co. one-fifth of the cost of construction, the said companies to furnish without charge the necessary land on their respective rights of way for the said transfer and storage track and that the cost of maintenance of the transfer and storage track be borne equally by the said railway companies.

The Chief Commissioner gave the following judgment at the sittings held at Saskatoon, on July 22, after the parties interested had been heard, an order was made giving effect to the application, and requiring the construction of a transfer and storage track between the G. T. P. Ry. and the C. N. R. at Battleford. The order calls for the completion of the transfer and storage track by July 15. This date was fixed at the hearing, without objection by the G. T. P. Ry. as allowing insufficient time in which the work might be done. Mr. Hansard, Solicitor for the G. T. P. R., now writes the Board stating that his company's Operating Department will not be able to get the track work completed until from August 10 to 15, and presumes that this will be satisfactory to the Board, so long as the work is being prosecuted in good faith, without the necessity of securing a further order extending the time for construction. It is important that the district affected should obtain the benefit of this transfer track for the autumn business. On the other hand, the Board is aware of the difficulties that at present prevail in obtaining material and men. Under the circumstances, an order may go extending the time for completion until Aug. 10. This does not mean that the work in the meantime is to be allowed to stand. On the contrary, it must be pressed forward as much as possible by the G. T. P. R. One of the Board's inspectors will check up the work and report progress.

Order 25191. was passed July 25, extending the time for the completion of the work to Aug. 10.

Minimum Weight of B.C. Lumber.

25205. July 26. Re complaint of British Columbia Lumber & Shingle Co., Vancouver, Riverside Lumber Co., Calgary, Alta., A. B. Cushing Lumber Co., Calgary, and Mountain Lumber Manufacturers' Association, Nelson, B.C., against proposed increase by C.P.R. in minimum weight of fir, spruce, hemlock, and common cedar lumber loaded in cars under 36 ft. long, from 30,000 to 35,000 lbs. It is ordered that the railway companies which on May 15, 1916, increased the minimum carload weight applicable to lumber and articles taking lumber rates from points of shipment in British Columbia and Alberta, when loaded in cars under 36 ft. long from 30,000 lb. to 35,000 lb, modify the said increased minimum by providing the minimum weight of 30,000 lb. for cars of the capacity of 2,050 cu. ft. or less; the said

modification to be published and filed immediately upon the receipt of this order, and to destinations in Canada, to be made effective forthwith.

Rates on Ores and Concentrates.

25211. July 27. Re complaint of British Columbia Mining Association against increased rates on ores and concentrates published in C.P.R. Tariff, C.R.C. no. W-2168, to take effect Aug. 1, 1916, from points of shipment in B.C.: It is ordered that the said increased rates be suspended until further order.

Pig Iron, Welland to Montreal.

25250. Aug. 3. Re complaint of F. L. Getzler of Montreal, against the 10th class rate of 16c charged on pig iron, in carloads, Welland to Montreal, in May, 1912, instead of the combination of 10th class 6c per 100 lb. to Hamilton, plus the commodity rate of \$1.75 a gross ton, Hamilton to Montreal. It is ordered that the complaint be dismissed.

Commissioner McLean gave the following judgment: Application was made by F. L. Getzler, a representative of a rate adjusting bureau known as The Canadian Transportation Rates. The applicant desired to be advised whether it was permissible to use a class and commodity rate in order to "defeat the through rate." It was stated that certain shipments of pig iron moved from Welland to Montreal through the period when there were no commodity rates on pig iron. Shipments were charged at the 10th class rate of 16c. The contention of the applicant is that the class rate of 6c from Welland to Hamilton, plus a commodity rate of \$1.75 a gross ton published through the season of navigation, during which period the shipments moved, should have applied. It was stated that there were three shipments concerned as follows: May 22, 1912, weighing 109,100 lb.; May 14, 1912, weighing 108,340 lb.; May 9, 1912, weighing 97,260 lb. The shipments in question took place some four years ago, and as was stated by the applicant at the hearing the matter involved was simply a question of refund. There is no evidence that any application was made to the railway for a commodity rate from Welland, nor is the question of a commodity rate basis from Welland before the Board in the present application. It was pointed out in the judgment of the Board in the matter of through rates vs. combination of locals that "it is a fundamental proposition under the policy outlined by the Railway Act that when a rate, whether joint or whether limited to points situated on one line of railway alone, has come into force in conformity with the provisions of the Railway Act, it is the only legal rate in respect of the traffic mentioned and between the points mentioned." There is no question as to the rate from Welland having been the rate legally in force. The Board has no power to direct a refund, but it may by a declaratory order state what is the proper tariff of tolls applicable to a certain class of goods, although no consequential relief is granted the applicant. Grand Trunk and Canadian Pacific Ry. Cos., vs. Canadian & British American Oil Cos., 13 Can. Ry. Case, 201. The Board has thus power to declare what is the legal rate; and if the rate charged is in excess of what is declared to be the legal rate, it is open to the parties to obtain a return of the excess through appropriate legal process. In the present application,

there is no question as to what was the rate legally in force when the shipments moved, and so there is no justification for a declaratory order. The Board's power in the present application is limited to declaring what is a reasonable rate for the future; but no application for this is before it. The application should be dismissed. Reference may be made to memorandum re through rates on lumber exceeding the sum of the locals, file 24647, Oct. 20, 1914.

New York Central Rd., and Ottawa and New York Ry. Tariffs.

25257. Aug. 11. Re order 23831, Feb. 2, 1915, suspending certain tariffs published and filed by the New York Central Rd. and the Ottawa & New York Ry., in so far as they increase the rates charged from stations in Canada to stations in Canada. Upon its appearing that the said railway companies now desire to publish rates between points in Canada in accordance with the judgment in the Eastern Rates Case, it is ordered that order 23231 be rescinded; and that said railway companies be granted leave to publish tariffs as permitted by the judgment in the Eastern Rates Case.

Rates on Wood Pulp to Mechanicville.

25262. Aug. 16. Re application of West Virginia Pulp & Paper Co., for an order disallowing rates on pulp wood to Mechanicville published in C.P.R. Tariff, C.R.C. no. E-2847; also for the suspension on behalf of West Virginia Pulp & Paper Co. and New York & Pennsylvania Co. for suspension of Supplement 15, to C.P.R. Tariff, C.R.C. no. E-2847, issued to take effect Sept. 1. Upon reading what has been submitted on behalf of the applicants and upon it appearing that the applicants and the railways have been unable to arrange a settlement, it is ordered that the said Supplement be suspended pending hearing on a date to be fixed by the Board.

Rate on Dessicated Vegetables to Montreal.

General order 168. July 11. Re complaint of the Graham Co., Ltd., of Belleville, Ont., against the rates on dessicated vegetables: Upon reading what is filed in support of the complaint and on behalf of the Canadian Freight Association; and upon the report of the Chief Traffic Officer of the Board, it is ordered that the railway companies west of Montreal carry dessicated vegetables, in carloads, to Montreal for export, at the domestic rates to Montreal, with the additional of a terminal charge at Montreal not to exceed six-tenths of 1c per 100, whenever the said combination is less than the rate of the published tariff.

Grain and Lumber Stopped at Cartier and Sarnia Tunnel for Orders.

The Assistant Chief Commissioner, D'Arcy Scott, gave the following judgments Aug. 2:—I think the C.P.R. had the right to file supplement 11 to C.P.R. Tariff C.R.C. no. W. 2061, naming extra charges at Cartier, and the G.T.R. to file C.R.C. Tariff E. 3300 naming extra charges at Sarnia Tunnel. No previous order of the Board prevented them from filing these tariffs. From the action the Board has already taken with regard to stop-over charges on grain and lumber at Cartier and Sarnia Tunnel, I think the tariffs now in question should not be interfered with. I would advise Mr. Tilston and the two railway companies accordingly. Deputy Chief Commissioner Nantel agree with that judgment.

Commissioner McLean gave the following judgment Aug. 4:—Notwithstanding the powers possessed by the railways to put into force increased tolls, on statutory notice, the Board dealt with the Cartier situation as one where the increase had to be justified before being allowed to become effective. The charge sanctioned under order 24436 was concerned with an extra charge for detention of grain and grain products and was concerned with the conditions at Cartier alone. (XIX Can. Ry. Cas. 263.) Whether the same charges are justifiable or necessary in respect of lumber and because of the detention of that traffic does not appear. Nothing has been adduced to establish either the similarity or identity of conditions in point of detention of the two forms of traffic. There has been no investigation to show either the necessity or the reasonableness of the same charges on lumber at the other points concerned, and the burden of establishing this necessity or reasonableness seems to me, in view of the action in the Cartier case, to be on the railways.

Proposed New Freight Classification.

The Chief Commissioner gave the following judgment July 26: Proof copies of the proposed new Canadian Freight Classification 17 have been received by the Board. Not only do the changes in the classification ratings appear to be radical, but substantial changes are also made in the rules. Owing to the fact that the new classification contemplates a uniform classification for the whole country, and that different classifications have in the past obtained, the effect of the changes, both in the classification and rules, differs in the different districts, with the result that what would be a restriction of the mixing privileges in one means a more extended right to mix carload lots in the other. It is extremely difficult as the matter now stands for the Board; and it would seem to be impossible for the shippers to properly consider the effect of the new rules and the new classification without definite information as to all the changes sought, the injustice or difficulty suffered under the former regulations, and, speaking generally, the effect of the changes. This information the railways either have or should have. An order should go directing the railway companies to file with the Board and serve on the parties a statement showing, in the first instance, all changes made in the rules and the grounds on which the changes are sought to be justified, and showing the results the changes would make on traffic in Eastern and Western Canada respectively.

General order 169 was passed accordingly, July 27.

The Canadian Northern Ry. is building 2 car floats at Port Mann, B.C., for conveying freight cars across Patricia Bay, until the large car ferry which it has decided to build, is ready for service. They were designed by A. Angstrom, Naval Architect, C.N.R., Toronto, and will be 158 ft. long over all, 46 ft. beam over plating, and 48 ft. over wales, and 11½ ft. deep. They will each take 8 large size freight cars. The first one was launched in July. The C.N.R. has bought two whaling steamships, the s.s. Germania and a sister vessel, formerly owned by Canadian Northern Pacific Fisheries, Ltd., which are being changed to make them suitable for towing purposes, and which are to be renamed Chilliwack and Sumas.

Increase of Wages for C.P.R. Western Shop Employees.

It was announced in Winnipeg, Aug. 10, that a new schedule of wages for employees of C.P.R. shops on the western lines had been signed. Negotiations had been in progress for a couple of months between the company's representatives and representatives of the federated trades. The new agreement is to run to April 30, 1917, when it may be renewed.

The average increase in wages runs between 2 and 2½c an hour for all trades, the largest being a 3c increase for tubers in the boiler shops. This increase applies all along the line from Fort William to the coast, which comprises three divisions, one from Fort William to Broadview; the second from Broadview to Kamloops, and the third from Kamloops to Vancouver.

The rates in the first division in which the Weston (Winnipeg) shops are included, and third division are practically identical, while in the second division they are 2c higher, which is accounted for by the higher cost of living in that territory.

Machinists—	Old Rate	New Rate	Increase

3rd year	20	21	1
4th year	23	24	1
5th year	26	27	1

Several concessions that the men asked for have been granted to govern working conditions, the principal ones being as follows: All hours over those bulletined as working hours in which the men are required to work shall be paid for as overtime, time and a half being granted until midnight and double time after that. This is to cover occasions when the shops are put on short time and a few men are called in for special jobs. In

changing from night to day shift or vice versa, the first day shall be paid for at overtime rates. When working hours are to be reduced the company will give 24 hours notice of such intention and 48 hours notice shall be given to all men to be laid off. This is to give men receiving notice time to make inquiries as to the reason for such notice.

In all the agreement covers 13 articles, including craft rules, which are set out in great detail so as to avoid friction as far as possible between the men and officials in departmental work.

The Late A. B. Stickney.

Alpheus Beede Stickney, who was the first General Superintendent of the C.P.R. at Winnipeg, appointed on the organization of the company in 1881, died at his home in St. Paul, Minn., Aug. 9, after an illness of four weeks. He had been in declining health for several years. He was born at Wilton, Me., June 27, 1840, lived on a farm in Vermont with his parents, attending a village school until he was 18 years old, and then took up the study of law in Dexter, Me. He was compelled to give up for lack of money and became a country school teacher until he had saved enough money to return to study law. He was admitted to the bar in 1862. He moved to Minnesota, practising law there until 1869, when he took up his residence in St. Paul.

This was at a time when railway building was in its early beginnings in the Northwest, and his law practice turned in the direction of railway matters. He soon gave up his practice and engaged in organizing, first, construction companies, and later railways. His first large undertaking was the St. Paul, Stillwater & Taylor Fall Ry., which he served for several years as Vice President, General Manager, and Chief Counsel. He later superintended the construction of a portion of the St. Paul, Minneapolis & Manitoba Railroad. On the organization of the C.P.R. in 1881 he was appointed its first General Superintendent at Winnipeg, arriving there Feb. 28 and continuing until the end of 1881 when he was succeeded by W. C. Van Horne, who was given the title of General Manager.

In 1882 he became Vice President of the Minneapolis & St. Louis Rd. In 1884 he began the construction of the Minnesota & Northwestern Rd., which afterwards developed into the Great Western. He was President of this road until its consolidation with the Chicago, St. Paul & Kansas City, and then became President of the latter road. He held that office until 1892 when he became Chairman of the Board of Directors. In that capacity he reorganized the company as the Chicago Great Western Railway and continued to serve as Chairman until 1900. His next connection with the road was in 1908 and 1909, when he became its receiver.

During his railway career he acquired extensive outside interests, one of the chief of which was the St. Paul Union Stockyards and packing houses, which he built in 1882.

In 1909 he charged that the practice of rebating had been resumed by many railways under such subterfuges as that of allowing large claims for overcharges and damages presented by favorite shippers. His charges resulted in an investigation by the Interstate Commerce Commission, before which he laid a plan for revising the late laws to make such practices impossible. Since 1909 he has been living in retirement.

Electric Railway Department

Detroit's Interurban Electric Railway Service.

By A. D. B. Van Zandt, Publicity Agent, Detroit United Lines.

Appreciative of the many benefits that come to them by reason of the operation of interurban cars for passenger and freight purposes, the people of Detroit and the other territory served by the Detroit United Lines cannot understand the philosophy of opposition to such an undertaking in any progressive community. It is equally certain that any serious suggestion to put an end to such service into and out of Michigan's metropolis would meet with the vigorous protests of our patrons, both freight and passenger. I had, some few years ago, the pleasure of discussing in the American Academy of Political and Social Science Annals the presentation of interurban problems to the public, in which I pointed out as follows: "While the interurban railway builder and operator has been learning his lesson of cost, the benefits to the public served have grown apace. In the great interurban railway centres like Indianapolis, Toledo, Cleveland, and Detroit, the people, through the constant use of the country trolley for business and pleasure, have gained a better understanding of farm life. These men of the city do not look upon the farmer as the joke 'Hey, Rube,' but as the man who feeds us all. They do not look with pitying glances on the man with the hoe, but, rather, are envious of the man who with the modern machinery at his command has, as it were, but to press the button and watch the land come to life with the fruits of the soil. The farm is not the thing the city man wants to shun; it is the reverse, for deep in his heart is the hope that some day he, too, will be able to retire to his own acre of peace and plenty.

"Similarly those of the farm and village have been brought into close and kindly touch with the city. They know the stores, they know the parks, they are even not unacquainted with the latest play. The farmer is no longer obliged to spend two or three days of his own time and that of his team in the task of marketing his produce at a price unknown until delivery is made, but today, through the agency of the interurban trolley, that makes possible an extensive system of rural delivery of mail, he gets his daily newspaper, knows early the price he can get for his product, places it on an interurban express car, follows by passenger car, and in as many hours as formerly took days he makes his sales and his purchases.

"Much of the opposition to the interurban railway has come from the village under the belief that a frequent service would spell mercantile ruin and here and there this opposition still exists. I quote from a recent edition of the Birmingham, Mich., Eccentric to show the change: 'When the trolley was first established it was claimed it would ruin the smaller towns; the reverse is true. Look over the following census figures and you will note that every town in Oakland not reached by an electric road has been steadily on the toboggan for the past 20 years. On the other hand towns having an hourly service or less have held their own or shown only a slight increase, while the section served by the

Pontiac line, with its 30 and 20 minute service, has absorbed more than the actual net increase in the country.'

The truth is, the interurban line is not a deterrent, but an aid to the small town. It does not of necessity cause all towns to become manufacturing centres, but it does give them better facilities to become such. The interurban line modernizes the trading post, giving the country merchant the same ease in making his purchases as has the corner store keeper in the city, and the same privilege of making these purchases as he wants them and in the quantity he wants. There is no longer the necessity of stocking up for the winter because of impassable road conditions. Today the interurban grocery delivers to its customers strawberries just as early in the season as does the city grocery."

That tells the story in brief. To know that last year our interurban cars, inclusive of city service travel in some of the smaller cities, carried practically 30,000,000 day passengers is to know that the service is filling a great need. Growing from a humble and hazardous beginning we are today operating into and out of Detroit more than 600 interurban cars daily, and this is being done with a constantly increasing city service over the same tracks within the corporate limits.

The freight and express end of our interurban business also had its humble start. Historically it is known that the interurban companies did not desire to carry freight. It was forced upon them by the public. Like Topsy, it "just grew." The beginning was with merchants sending out into the country some package to the roadside farmer or to a small village dealer, while a few pounds of butter or some dozens of eggs found their way into the city. All this was through the kindness of the car crews of the passenger cars, a cheery word, a cigar, or occasionally a little farm produce being their remuneration for acting as messenger boys, with the companies not concerned in any way with the transactions.

The custom grew apace, and from time to time parcels became lost, and not infrequently the companies were blamed for this, and asked to make good for the result of their complimentary service. So burdensome did this free, handy, but often unsatisfactory method of delivery become that in defence combination cars were experimentally tried and for a charge packages were picked up en route and delivered direct to house or store adjacent to the tracks.

As I have said, all this was experimental; neither the public nor the operators knew how much of this form of trading was in sight, but as the business continued to grow it became a nuisance to both city and interurban riders—to the city car passengers by reason of holding back the city cars while the interurbans were loading and unloading their packages, while the interurban passenger desired to reach his destination in as short a time as possible and freight operation lengthened instead of shortened the running time.

The city did not wish to stop the transportation of freight, because of the benefits to the people, but neither did it want the streets used as a shipping yard, so the companies were told to get a freight depot, where the work could be done without discommoding the public. This was done, and the council adopted the necessary resolution to make the track connections. At approximately the same time the council adopted a freight regulatory ordinance beginning with this language: "Under and by virtue of the provisions of sec. 6456 of the compiled laws of 1897, consent, permission, and authority is hereby granted street railway companies lawfully operating street railways within the City of Detroit . . . to carry packages, merchandise and other light freight, milk, farm produce and garden truck. . . ."

This was in 1901 and since that time the freight business has developed wonderfully. The central freight depot has been outgrown, and plans are being rapidly completed for a new freight terminal necessitating an investment of a million dollars. In addition to the central depot there are also convenient unloading places in several parts of the city.

Handling express and light freight the equipment at the present time consists of 43 motor cars, 31 trailer box cars, a locomotive and 2 cabooses. There are daily 34 scheduled round trip runs and from 5 to 7 extras almost every day. The receipts last year from this traffic exceeded \$800,000.

Interurban passenger cars are recognized as such, and they operate within the city under the rules and regulations that apply to strictly city cars, though in some of the street railway settlement plans before the people distinction in operation has been made. None of these plans having been adopted, the interurbans continue to operate under the same rates of fare and the same transfer regulations as do the city cars, yet to a very marked degree the purely city riders refrain from using the interurbans, recognizing the real purpose of such cars is to get the people into and out of the city as comfortably and speedily as possible. While operating within the city the fares are collected for the company owning the city lines, and in return the interurban lines receive pay on the car mileage basis for the use of the cars. No money is paid by the interurban cars for the use of the tracks, nor are interurban cars charged with any portion of the maintenance of these city tracks.

In the matter of freight the state law permits of the operation of such cars during the night time into and through cities, towns and villages without local consent, while for day time operation this consent is necessary and has always been gladly given in recognition of the vital importance of the work.

There is no question that the interurban cars have played, and are playing, a highly important part in the development of Detroit. Many miles of track now within the city were constructed under interurban grants and with which the city had to deal only as it extended its corporate limits. These lines, on practically

all the main arteries, made it possible for the community to expand much more rapidly than would otherwise have been possible.

Naturally the interurban lines have had and have today the favorable support of our daily newspapers, which are themselves large users of these cars for the shipment of their editions out to the country and to the cities and towns served by us. So serviceable are these cars that on some of the lines they are used by newspapers for distributing their large Sunday editions. From the beginning of the interurban system our newspapers have seen the benefits of such service into and out of the metropolis. Two quotations of many years ago from one of our leading newspapers will suffice:

The Evening News of Sept. 20, 1895, said: "With the immense amount of street railway construction now going on in Detroit, and numerous trolley lines either finished or projected between Detroit and neighboring towns and villages, it would seem that the wants of the public for rural and suburban transportation were being largely discounted in advance, but the results thus far have gone to show that business increases with the facilities provided for it. . . . But the end is not yet—in fact there seems to be no end to electrical possibilities of affecting the welfare of Detroit and neighboring cities which will be brought into closer connection with the metropolis by means of rapid trolley lines."

On April 5, 1896, reviewing some 15 interurban roads built, building, or projected, the same newspaper said: "The future trade which shows through electric railway lines in and around Detroit marks in the most significant manner the progress of the city towards increasing size and importance. . . . The benefit of these lines, which, in a majority of cases, will run along established highways, cannot be over estimated. They will establish new social and commercial ties between town and country. . . . This work of laying out lots, obtaining franchises and negotiating with many men demands a high order of skill and diplomacy and is entitled to a fair reward and whoever institutes and builds a suburban railroad is entitled to the thanks of Detroit and its citizens. . . ."

Regina Municipal Ry. Earnings, Etc.

Following are statistics for July, compared with July 1915, and the total for seven months ended July 31:—

	1915.	1916.	
	July 1914.	July 1915.	Jan. 1 to July 31, 1916.
Total revenue ..	\$19,070.44	\$15,887.44	\$122,548.43
Expenses ..	14,319.35	15,018.87	114,235.74
Capital charges..	8,022.96	9,137.53	56,160.73
Operating surplus	4,751.09	868.57	8,312.69
Total deficit	3,271.87	8,268.96	47,848.04
Expenses per car power ..	13.34c	14.19c	16.24c
Expenses per car mile without with power	17.49c	18.37c	21.55c
Platform wages per car hour .	72.69c	75.97c	72.76c
Passengers carried	403,286	338,540	2,716,855
Expenses less capital charges, percentage . . .	75.01		
Expenses with capital charges, percentage . . .	117.15		

The Winnipeg City Engineer has been asked by the city council to report on the best means of lessening the noise caused by the operation of the Winnipeg Electric Ry. cars.

Montreal Tramways Company Annual Report.

Following is the report for the year ended June 30, submitted at the annual meeting, Aug. 1:—

Gross earnings	\$6,609,765.15
Operating expenses	3,707,053.04
Net earnings	\$2,902,712.11
From which deduct:—	
City percentage on earnings	\$418,083.90
Interest on bonds and loans	806,721.44
Interest on debenture stock	800,000.00
Taxes	93,600.00
	\$2,118,405.34
Net income	\$784,306.77
Dividends	323,871.25
Surplus	\$460,435.52
Less:—	
Transferred to contingent renewal account	\$275,000.00
War tax (2 years), 1915-16	74,013.17
	\$349,013.17
Transferred to general surplus	\$111,422.35

The gross earnings increased during the year \$84,533.48 or 1.30%, the operating expenses decreased \$6,943.40 or 0.19%, and the net earnings increased \$91,476.88 or 3.25%. The ratio of operating expenses to earnings is 56.08%, compared with 56.92% in 1914-15.

\$313,575.99 has been charged to contingent and renewal account during the year, representing expenditures made for special renewals. \$583,894.20 has been expended in maintenance of properties, plant and equipment, and charged to operating expenses. This amount, together with \$313,575.99 charged to renewal account, makes a total expenditure during the year on the upkeep of the properties of \$897,470.19. During the year there was expended on capital account \$320,872.17. The company under its trust indenture is entitled to issue bonds on its capital expenditure, equal to 75% thereof, and under this provision it is now entitled, when it shall so desire, to have bonds certified to an amount of \$963,485.55. During the year there have been redeemed and cancelled \$163,233.32 of underlying bonds. The amount redeemed to date is \$1,146,746.56.

The gross earnings increased during the latter part of the year, indicating a tendency to an improvement in the business conditions of the city. In connection with the underlying bonds purchased during the year, \$3,387.80, representing the difference between par value and the purchase price, has been credited to the general surplus account. Your directors, acting on the authority of the shareholders, issued 10,000 shares of common stock, which have been allotted to shareholders at par. During the year the company has, at great expense, completed the work of placing its overhead feeder wires in the municipal conduit (where provided) on St. Catherine Street, and is now proceeding with the same work on Bleury St. and Park Ave. The work in connection with the re-arrangement of the system of power distribution is being proceeded with and satisfactory progress has been made during the year. The company has accepted a contract for machining shells, and work in connection therewith is progressing satisfactorily. The property has been maintained in a high state of efficiency and is in excellent condition. Your directors desire to place on record their appreciation of the valuable and faithful services rendered by the officers and employees.

Gross earnings	\$6,609,765.15
Operating expenses	3,707,053.04
Net earnings	\$2,902,712.11

Expenses % earnings	56.08
Passengers carried	156,408,303
Car earnings per passenger	4.12c.
Transfers	55,512,897
Total passengers carried	211,951,200
Car earnings per passenger, total carried	3.04c.

Cost of road and equipment to June 30, 1915	\$37,222,513.92
New construction for the year	320,872.17
	\$37,543,386.09
Accounts receivable	\$459,592.66
Stores	436,684.26
Cash in bank and on hand	247,564.25
Underlying securities redemption fund	3,643.24
	1,147,484.41
Investments	318,887.50
	\$39,009,758.00

Capital stock	\$4,000,000.00
Less unpaid and subject to call	656,400.00
	\$3,343,600.00
Debtenture stock	\$16,000,000.00
First and refunding mortgage 5% gold bonds	13,335,000.00
Underlying bonds	3,273,253.44
Mortgages	16,863.00
	\$5,988,716.44
Accounts and wages payable	\$461,238.91
Accrued interest	230,872.00
Accrued tax on earnings	315,628.85
Employees' securities	20,965.58
Unclaimed dividends	1,956.57
Unredeemed tickets	237,214.71
Suspense	95,262.75
War tax (2 years)	74,013.17
Dividend payable Aug. 1	83,590.00
	1,520,742.54
Capital reserve	\$600,000.00
Contingent renewal reserve	111,323.22
Surplus	\$775,588.00
Discount on underlying bonds	3,387.80
	778,975.80
	1,520,299.02
	\$39,009,758.00

*This includes amount due on shares not yet exchanged.

The directors were re-elected for the current year, as follows:—E. A. Robert, President; J. W. McConnel, Vice President; F. H. Wilson, Hon. J. M. Wilson, W. C. Finley, J. M. McIntyre, G. G. Foster, K.C., W. G. Ross, Montreal, and P. J. McIntosh, New York.

A Hamilton, Ont., coroner's jury returned the following verdict, recently:—"We find that Clarence Wilson came to his death on July 8 while riding on a street car on Burlington St. E., which was taking a crossover switch at an excessive rate of speed. The motorman had not been informed of the crossover, and we find that the company was negligent in that he was not so informed. We recommend that in future flagmen be located at all crossover switches." The evidence showed that the order as to the crossover switches was posted in the company's office where the motorman should have seen it.

The Calgary, Alta., Municipal Ry.'s extension to the Sarcee military camp, according to a statement reported to have been made by Superintendent McCauley, has practically been paid for out of earnings. The receipts for freight alone during July are reported to have been \$1,700. Ten freight cars a day are operated, and about 50 passenger cars a day are run to and from the camp. The cost of labor on construction was about \$4,000, and the whole cost of the line did not exceed \$15,000. When the camp is abandoned the track and overhead material can be used elsewhere.

The Toronto Suburban Railway's Change of Gauge and Grade in Toronto.

The Ontario Railway and Municipal Board has given judgment on the Toronto Suburban Ry. Co.'s application for approval of its proposed change of gauge, change of grade where necessary, and renewal or tracks where necessary, within Toronto city limits, the following being a summary.—This is an application for approval of two plans, A and B respectively, A showing the company's tracks along Dundas St. from Lambton Mills through York Tp. and the City of Toronto to Keele St., with a spur southerly along Gilmour and Fairview Aves., also from Dundas St. northerly along Keele St. and the Weston Road south to the city limits, also extending easterly from Keele St. along St. Clair Ave. and Davenport Road to Bathurst St. and southerly along Bathurst St. to the C.P.R. It is proposed to change the gauge of the tracks from 4 ft. 10 $\frac{1}{4}$ ins. to standard, 4 ft. 8 $\frac{1}{2}$ ins. Plan B shows the tracks easterly along Dundas St. from the city limits at Runymede Road to Keele St. and northerly along Keele St. to the C.P.R. It is proposed to substitute girder rail for the T rail at present in use. While this is being done, permission is asked to lay and operate along portions of Keele St. and Dundas St. a temporary track. It is also asked that the City of Toronto contemporaneously repair and reconstruct the railway portion of the roadways covered by the agreement of Nov. 11, 1899, made with the town of Toronto Junction, now part of Toronto, which roadways include Dundas St. from the city limits easterly to Keele St., and northerly on Keele St. to the C.P.R.

The Board was advised that the City Engineer had no objection to the proposed change of rail and implied that the council's consent would be forthcoming. He also consented to the laying down of the proposed temporary track. York Tp. does not object, and the City of Toronto does not press its objection to the proposed change of gauge, and indeed objection from either quarter would be purely vexatious in view of the plain provisions of the agreement before mentioned. So far as York Tp. is concerned, there is complete concurrence with the company's proposals, but at this point the concurrence of the city ceases, and differences arise as to its rights and obligations under the agreement. The company alleges that the pavement along Dundas and Keele Sts., which will be torn up in making the changes, is worn out, and should under the agreement be replaced at the city's expense, as the city agreed to "construct, reconstruct and maintain in repair the street railway portion of the roadways traversed by the railway system." The city replies that the work must be done at the company's expense under a clause in the agreement providing that "in the event of the company desiring to make any repairs or alterations in the ties, stringers, rails, turnouts or curves in paved streets, the portion of the roadway torn up in so doing shall be repaved by the corporation but at the expense of the company."

Another question arises on the construction of the agreement, as to the incidence of the cost of the concrete base under the tracks, the company claiming that its cost, as coming under the description of substructure, is not properly chargeable to the company, or in the alternative, only the cost of the increased depth of concrete (6 ins. additional to the normal 9 ins.) necessitated by the tracks

should be charged to the company. The agreement places upon the corporation the burden of construction and repair of the street railway portion of the railway, and expressly excludes the tracks, substructure and superstructure required for the railway; it also places upon the company the duty of constructing the tracks and substructure from time to time, and the Board takes this to mean, both the initial construction and the maintenance in repair of the tracks and substructure. The agreement also declares that in the event of a paved street being torn up by the company for any of the purposes mentioned, the cost of repaving shall be paid by the company.

Dealing with the question of the incidence of cost of constructing the concrete base, it was found on examination by the Board's engineer, that the concrete base was in good, or fairly good condition, so that it follows, that if the company in tearing up the roadway injures or destroys the existing concrete base, it may be made good as a detail of the repairing by the corporation, but at the company's expense. As to portions of the streets in question which are now paved with tarvia, without concrete base, the corporation stated that it was the intention to lay a permanent pavement the width of the track allowance, which will require a concrete base. The plans submitted show a concrete base laid on the sub-base, 15 ins. thick, in which the wooden ties are embedded in such a way that the tops of the ties are flush with the upper surface of the concrete base, thus offering an even bearing on which the steel rails are laid. The pavement is then completed by laying blocks of granite or other suitable material, bringing the travelled surface flush with the top of the rail. A difference has arisen as to which of the parties shall bear the expense of laying the concrete base. The Board reached the opinion that the word substructure as used in the agreement includes the entire body of concrete which carries the rails. The company may take the ground, after conceding that the entire concrete base is substructure, that a different rule is applicable in the present case, holding that the company's obligation at the most is the replacement of the pavement destroyed by one of the same kind now used. The agreement, however, provides that work of this nature is to be done under the supervision of the City Engineer and to his reasonable satisfaction, and the city has sufficiently indicated that only a concrete base as shown in the plans will secure that reasonable satisfaction.

On the question of the corporation's maintenance of the pavement in repair, the city offered to pay the whole cost of paving that portion of Dundas St. now laid with tarvia, and of paving the remaining portion of Dundas St. and the portion of Keele St. in question, less such a sum as the Board might fix on the advice of its engineer, as representing the life of the pavement on those streets, which sum should be paid by the company, this pavement, as proposed by the city, to include the body of the roadway from the base to the top of the rails within the track allowance as already defined. This proposal was made on the understanding that any order based on it should not be made the subject of an appeal by the company, and in case of such appeal, the corporation would be free from any assumption of liability on its account. The Board accepted the pro-

posal with the reservation, and as in the absence of such a proposal, the Board would have felt constrained to hold the company liable for the whole expense of renewing the pavement torn up by it, there is no injustice to the company in adopting the proposal and making it a term of the Board's order.

Some discussion arose as to the change of site of the tracks on Dundas St., which is at present in the centre of the street, and the corporation desires that in the reconstruction proposed, the track should be laid a little off the centre of the street, so as to permit of the laying of another and parallel track when it becomes necessary to operate a double track railway. The city held that it could, under the agreement, require a relocation of the track in connection with the proposed reconstruction, but the Board could not adopt that view, as the location of the track on these streets referred to is the location when the undertaking was initiated, and the company has acquired a vested right in the site, which cannot be disturbed during the continuance of the charter, unless by forfeiture under some applicable provision of the agreement. Any change in location must be the subject of negotiation and agreement by the parties concerned.

The plans submitted will be approved and an order issued in accordance with the foregoing opinions. No question has been raised that the installation of the diamond and safety device at the intersection of the company's line with the Toronto Civic Ry. at the corner of Davenport Road and Lansdowne Ave., already ordered by the Board, should be done contemporaneously with the foregoing works, but as the interests of the parties will be best served thereby, the Board will so order. There will be no costs to either party but the company will pay \$30 for law stamps on the order.

Jitney Traffic Notes.

The Vancouver, B.C., City Council has put on a special motor cycle constable to look after jitney traffic.

A jitney service is being operated in Brantford, Ont., to the Terrace Hill district and residents are quoting its success as a reason why the municipal electric railway should be extended.

The Intermunicipal Industries Committee, representing South Vancouver and adjacent B.C. municipalities, is discussing the jitney question in detail, with a view to united action by suburban municipalities.

The Vancouver City Council has decided to examine all bonds offered by jitney owners, which have been rejected, and to investigate the standing of the companies offering them, and then to accept such as are satisfactory. The license inspector will be directed to thereafter prosecute all jitney men who have not registered bonds.

The Winnipeg Jitney Owners' and Drivers' Association has elected the following officers: J. Wilson, president; J. R. Wilding, vice president; J. Lamarre, secretary-treasurer. The members passed a resolution promising to make the jitney service in Winnipeg the best in Canada, and inviting the public to make suggestions which would tend to its improvement.

Lavatory Accommodation on Hamilton, Grimsby and Beamsville Electric Railway.

The Judicial Committee of the Privy Council has dismissed the Hamilton, Grimsby & Beamsville Electric Ry. Co.'s appeal against the decision of Appellate Division of the Ontario High Court of Judicature, confirming the Ontario Railway and Municipal Board's order whereby the company was directed to file complete plans and specifications for sanitary conveniences on its passenger cars and in its passenger station at Grimsby.

On Dec. 11, 1914, the Board dealt with a complaint by four residents of Grimsby relating to the lack of the accommodation mentioned, and after hearing evidence ordered that the plans and specifications named be filed within 30 days. The company appealed against this decision on the ground that the Ontario Railway and Municipal Board had no jurisdiction in the matter as the company's railway was, according to the Railway Act of 1888, sec. 306, under Dominion jurisdiction.

The appeal was heard Nov. 9, and unanimously dismissed with costs, the Board's order being confirmed, that is, the company's contention as to being under Dominion jurisdiction was not upheld. The appeal to the Privy Council followed, and the present judgment confirms the Ontario Court's judgment and the Board's original order.

This decision is of considerable importance, as it settles the question of jurisdiction which, owing to ambiguity in the Act, has caused considerable friction for many years. The reasons for the Privy Council's judgment have not reached us at the time of writing, but the Ontario Railway and Municipal Board's full judgment was given in Canadian Railway and Marine World for June, 1915. The issue for August, 1915, published the report of the Board of Railway Commissioners' expert in connection with the provision of lavatory accommodation on interurban and suburban cars, and comments of several companies thereon.

The Hamilton, Grimsby & Beamsville Electric Ry., which is a constituent of the Dominion Power & Transmission Co., has an extreme distance between terminals of 22.6 miles, practically all on, or along, the public highway and for a large portion of the way in front of residences and over city and village streets. Many objections to the use of car lavatories have been made by residents along the line. The company provides lavatory accommodation at Hamilton, Bartonville, Grimsby and Beamsville stations.

Sandwich, Windsor & Amherstburg Ry's Difficulties in Walkerville.

For a considerable time past there has been much friction between the town of Walkerville, Ont., and the Sandwich, Windsor & Amherstburg Ry., with respect to the service given. One of the matters in dispute has been the paving of the streets between the tracks, on such of the streets as are now unpaved, and it appears that the council has called upon the company to have this work done, but no steps have apparently been taken to comply with the direction. A second matter has arisen, viz., a direction by the council that the cars should stop at the near side of the street instead of the far side, as at present, and as is the case in Windsor.

There are other matters about which there is a difference, which has resulted in an endeavor being made to start a motor bus service in the town as a municipal enterprise. In reference to the latter, the council has prepared a bylaw to provide \$15,000 to equip a motor bus service, which is to be voted on by the ratepayers Sept. 2. In order to demonstrate what could be accomplished by such a service two cars of different makes were operated in the town from July 27 to 31, inclusive. The cars ran on a 15 minute schedule, cutting a figure eight through the town, running in opposite directions over a total distance of 5½ miles. No fares were charged during the demonstrations. They operated from 11 a.m. to 11 p.m. The two cars averaged about 80 passengers per round trip. The bylaw provides for the expenditure of \$15,000 to equip the service, and the municipal authorities claim that the revenue from the service will pay operating expenses, and provide a fund for extending the service.

The matter as to the stopping of the cars on the near side of the streets has reached the courts. On July 30, orders were given to the company by the council to have its cars stop at the near instead of the far side of street crossings in the town, and the Mayor is reported to have stated that unless the order was complied with, as well as the previous order respecting the paving between tracks on unpaved streets, steps would be taken to have the company ordered off the streets entirely. As the cars did not make the stop as required, but continued to stop at the far side of the crossings, the Mayor and officers of the council proceeded Aug. 1 to stop the cars running, and succeeded in holding up the traffic for some hours. On Aug. 2 the company obtained an interim injunction restraining the Mayor and Town Council from interfering in any way with the operation of the cars in the town, the allegation being that the Mayor "without color of right did impede the traffic to the annoyance and discomfort of passengers." The case was set down for argument in Toronto Aug. 10, but was adjourned, the interim injunction being continued.

Jas. Anderson, General Manager, is reported to have said Aug. 2: "We are quite willing to have the cars stop at the near side on paved streets, but changes like that cannot be put into effect abruptly. We have the comfort of the passengers to consider and if cars are stopped on the near side in Walkerville, in some places passengers would be forced to wade through mud on rainy days, as no crossing provision has as yet been made for them on that side of the street. The stopping of the street cars on Tuesday was a high-handed piece of work and the passengers on the cars held up and those who waited for hours for a car were the principal sufferers."

A circular was issued by the company Aug. 3, stating that the stops would be made on the near side of the streets on and after Aug. 5.

The Winnipeg Electric Ry., during August entertained several thousands of the children of the city under 12 years of age. The first of the excursions took place Aug. 1, when 10 carloads of children were collected in the north end of the city, taken to Assiniboine Park, and there given an afternoon's enjoyment, finishing up with refreshments and the return ride home. It was estimated that about 10,000 children would be thus entertained by the end of the month.

The Sudbury-Copper Cliff Suburban Electric Railway.

The construction of this railway was commenced July 12, 1915, and it was partly opened for traffic Nov. 11, 1915. The line extends from Sudbury, Ont., at Ramsay Lake, following John, Station, Durham, Cedar, Lisgar and Elm Streets, the last mentioned being the main street, to the outskirts of the town, and thence along the highway by the C.P.R., Sault Ste. Marie Branch, and the Canadian Copper Co.'s property, to Copper Cliff, 6.27 miles. In Sudbury, 0.73 mile of the line has been laid in a 6 in. cement base with vitrified brick on the bitulithic pavement built by the town. The line is laid with 80 lb. T rail on cedar ties at 20 in. centres. Three inch gravel ballast is used and the rails are electrically bonded. The maximum grade is 3¼% with practically no curvature outside the towns. There are no bridges and only three timber pile culverts of 15 ft. span. The line crosses the C.P.R. main line on Elm St., on the level, where two solid manganese steel diamonds have been inserted in the track, and gates and interlocking plant installed. The overhead construction in the towns is carried on tubular steel poles with cross spans, and in the country, on wooden poles with brackets. The trolley wire is 4-0 copper, and 600 volt d.c. power is used, being obtained from the Wanapitei Power Co. at 2,300 volt, 3 phase, 60 cycle a.c. The motor generator set at Ramsay Lake consists of one m.p.c. 6 300 k-720 r.p.m. 550/600 volt compound wound d.c. generator, 3 panel switchboard. The company operates three double truck cars, each with seating capacity for 50 persons. The cars are equipped with 4-80 G. E. motors, K6 controllers and Westinghouse air brakes, and are 42 ft. long, weighing about 22 tons.

A half hour service between Sudbury and Copper Cliff is given from 6 a.m. to 12.30 a.m., and a local car runs from Elm St. crossing to Ramsay Lake every 20 minutes. The Ramsay Lake & Copper Cliff fare is 15c. and tickets are sold at 8 for \$1. Workmen's tickets are sold in books of 60 for \$4.50, good on all cars at all times. The buildings on the line comprise the Copper Cliff station, 18 x 30 ft., and the car barn, with 2 tracks, 40 x 120 ft.

The directors of the company are, President, J. J. Mackey; Vice President, J. H. Morin; Secretary, M. J. Powell; Treasurer and Managing Director, L. O'Connor; and L. Laforest, C. McCrea, M.L.A., and T. E. Smith.

The Buzzer is the name selected for the bulletin being issued by the British Columbia Electric Ry., as a means of communication between the company and the public. Prizes were offered for suggestions and the winning name was sent in by 11 persons, who each received \$2. Nine persons each received \$1.50 for the suggestion Current Comments, and four persons each received \$1.25 for Between the Lines. W. G. Murrin, General Superintendent, selected the name, from 5,041 sent in.

British Columbia Electric Ry. Employees and the War.—Since the commencement of the war in Aug. 1914, 368 employees of the B. C. Electric Ry., and 80 employees of the Western Canada Power Co., have enlisted. Those who return from the front are reinstated as far as possible, and their applications for re-employment receive preference over all others.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—The residents of the Terrace Hill district have applied to the Brantford City Council to authorize the extension of the electric railway into that district. This extension was promised some years ago by the old company, but was postponed to permit of the building of the Holmedale extension. (May, pg. 200.)

British Columbia Electric Ry.—The New Westminster, B.C., City Council is regrading certain streets one of which is Sixth St., but has not come to an agreement with the B. C. E. Ry. respecting the cost of lowering that company's tracks at the street intersections at the corner of Sixth St. and Fourth Ave. The company claims the line is being operated at a loss, and that it should not be called upon to lower its tracks seeing that the work is to be done purely for the city's benefit.

The first part of the company's freight sheds at the New Westminster water front has been completed and the staff have moved into it. The old shed is to be torn down. It has not yet been decided when the second and final unit of the shed will be built. (June, pg. 242.)

Calgary Municipal Ry.—A proposition to extend the Sarcee military camp line for half a mile has not been approved by the Board of Commissioners. The following letter from T. H. McCauley, Superintendent, was subsequently received by the Commissioners: "As the city does not feel disposed to construct the half-mile loop to the guardhouse at Sarcee, the feeling being that it is too late in the season, I beg to submit to you the following proposition, as a guarantee of my confidence in the proposition, which was recommended for the convenience of the soldiers: I will construct the line immediately at my own expense, turn the operation over to the Returned Veterans' association, accepting 75% of the net profit over all operating expenses, they to receive as a contribution to the fund 25% until the 75% repays me for the cost of the line. After I have received the cost of the line I will then accept 50%, donating 50% to the Returned Veterans' association or club, all subject to the city having the right to take over the line at any time at cost, provided the city loans the extension 2 motors, 2 pairs of wheels and fittings from surplus stock on hand, and supplies power free, representing \$2 a day. There would be one fare charged on this and it would have no connection with the present system. This offer is made on behalf of the returned veterans and the soldiers at Sarcee, and considering the liability I am assuming I believe the city should grant the concessions asked, as it would be a feeder to the present line by permitting the soldiers transportation between these points, which they now have to walk, regardless of weather conditions."

Edmonton Radial Ry.—The Board of Railway Commissioners has authorized the Edmonton, Alta., City Council to build its electric railway across the Grand Trunk Pacific Ry. at the intersection of 27th St., between Armstrong and Cochrane Avenues, under the supervision of the G.T.P.R. engineer; and to insert a drawout there, the same to be protected by a half interlocking plant. The question of the maintenance of this plant is reserved for further consideration. (Jan., pg. 30.)

Hamilton, Grimsby and Beamsville Electric Ry.—At a special meeting of the Lincoln County Council, Aug. 11, F. H. Keefer, K.C., Thorold, Ont., was appointed as arbitrator between the county and company in connection with the request for the use of the Queenston and Grimsby shore road, the company's franchise over which expired in February. The county demands \$100 a mile through the townships of Clinton and North Grimsby, and \$400 a mile through the villages of Grimsby and Beamsville, on a 10-year franchise, but the company does not wish to pay this amount. The Ontario Railway and Municipal Board was unable to act as arbitrators in the dispute.

Lake Erie & Northern Ry.—The Brantford, Ont., City Council granted a permit, Aug. 11, for the erection of the new Union station, an illustrated description of which appeared in our June issue, pg. 240. The estimated cost of the building is \$25,000, the contractors being Schultz Bros., Limited. The work of putting in the foundations has been in progress for some time. The permit was issued subject to the company carrying out the Board of Railway Commissioners' award in reference to the transfer of certain lands to the city by the company. The station is to be used by the Hamilton and Brantford Ry. as well as by the L. E. & N. R.

The regular operation of trains on the line into Port Dover by electric power was started Aug. 1. At a meeting of the Port Dover Council, July 31, plans were approved for the bringing of the railway into the town by St. Patrick St. down to a point opposite the park, instead of the proposal of having a Union Station with the G.T.R.. The proposition is being discussed with the company. (Aug., pg. 338.)

London & Port Stanley Ry.—A press report states that plans are under consideration for making the line a double track one. This work and the necessary additional equipment is estimated to cost \$500,000. (Aug., pg. 338.)

London & Lake Erie Ry. and Transportation Co.—A press report of Aug. 16 stated that Canadian Northern Ry. officials were inspecting the company's terminals at London and Port Stanley, in connection with a proposal to take over the line. Another report says that while there are negotiations with the C.N.R., both the London St. Ry. Co. and the London Railway Commission operating the London & Port Stanley Ry. are considering the possibility of acquiring the line.

London St. Ry.—A bylaw approving of the arrangement between the city council and the company has been passed. The bylaw grants the company the privilege of operating its cars on Sundays, for one year, and the company agrees to double track the Dundas St. line, to extend the Hamilton Road line to West St., and to make other improvements. The double tracking and the extension are to be counted as new lines within the meaning of the agreement between the parties on the population requirements of the city. The additional works to be done include some pavements, but no other new pavement work is to be asked for this year. (July, pg. 299.)

Montreal Tramways Co.—A dividend of 2½% for the quarter ended June 30 was passed Aug. 1.

Ontario Hydro Electric Railways.—At an executive meeting of the Ontario Toronto, July 25, Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, is reported to have said that Sir Robert Borden and three other Dominion Cabinet Ministers had assured him that the Dominion would subsidize at the rate of \$3,500 a mile, radial electric railways to be built in Ontario under the Commission's direction, provided that the province would give a similar subsidy.

The Ontario Government has passed an order in council authorizing the Hydro Electric Power Commission of Ontario to buy a right of way for a power transmission line from Toronto to Dundas. It will be 100 ft. wide, so as to be available for an electric railway also.

Saskatoon Municipal Ry.—Tenders are under consideration by the Saskatoon, Sask., City Council for the laying of 1,200 ft. of new double track on the provincial bridge at 25th St., the work to be done in conjunction with the paving of the bridge by the Saskatchewan Government, for which tenders are also under consideration. (Aug., pg. 338.)

The Sudbury-Copper Cliff Electric Ry. is considering the question of building two extensions, one from the Sudbury flour mill, which is the present eastern terminus of the line, to the Murray nickel mine, about 4 miles; the other to also start from the Sudbury flour mill and run to the Mond Nickel Co.'s plant at Coniston, about 19 miles. These proposed extensions are said to be principally for the purpose of facilitating accommodation for the employees of different mines so as to make it possible for them to live in Sudbury.

Winnipeg Electric Ry.—It was expected that the double track line from the northern terminus of the city lines to Kildonan Park would be completed and in operation by Aug. 31. The transfer point at the terminus of the city lines will still be maintained for Kildonan Park cars after the double tracking has been finished. Under an order of the Public Utilities Commissioner made about a year ago strip tickets of 4 are now sold on street cars to Kildonan Park for 25c. (Aug., pg. 338.)

Mainly About Electric Railway People.

R. F. Rankine, formerly Treasurer, International Ry., Buffalo, N.Y., died at Niagara Falls, N.Y., recently, aged 54.

Patrick Dubee, Secretary - Treasurer, Montreal Tramways Co., has completed 26 years service with this company and its predecessors.

E. R. Wood, President, Dominion Securities Corporation, Toronto, and a director, Canadian Northern Ry., has been elected President, Buffalo, Lockport & Rochester Ry.

L. McCutcheon, chief clerk to General Freight and Passenger Agent, British Columbia Electric Ry., has resigned to enter Canadian Northern Ry. service.

W. J. Carrique, General Manager Canadian Street Car Advertising Co., died at his summer home at Strathmore, Que., very suddenly, Aug. 14. He was engaged at business in the company's offices at Montreal all day, but had a hemorrhage

of the stomach after returning home and died in the course of the night. He was born in Halton County, Ont., Aug. 19, 1872, and entered the advertising business, serving as advertising manager of the Hamilton Herald and subsequently of the Ottawa Citizen. He subsequently started the Canadian Street Car Advertising Co., which now controls nearly all the street car advertising in Canada.

E. P. Coleman, whose election as President, Canadian Electric Railway Association, was announced in our last issue, was born at Taunton, Mass., June 14, 1867, and educated at the public schools there. He was from Feb. 9, 1885, to Feb. 9, 1896, in the Huber Printing Press draughting room at the shops of the Taunton Locomotive Manufacturing Co., with which his father and grandfather had been associated for many years; Jan. 1, 1896, to Sept. 1, 1900, Treasurer and General Manager, Attleboro Steam and Electric Co., Attleboro, Mass.; May 5, 1898, to Mar. 31, 1899, in U. S. service during the Spanish War as Second Lieutenant and Battalion Adjutant, 5th Massachusetts Infantry; July 1, 1899, to Sept. 1, 1900, General Manager, Plymouth Electric Light Co., Plymouth, Mass.; Sept. 1, 1900, to June 1, 1905, Vice President and General Manager, Consolidated Lighting Co., Montpelier, Vt.; June 1, 1905, to Mar. 1, 1907, in practice as consulting engineer, general, electric light, power, railway and quarry work, and Treasurer and Manager, Wetmore and Morse Granite Co., Montpelier, Vt.; Mar. 1, 1907, to Jan. 1, 1909, General Manager, Great Northern Power Co., Duluth, Minn.; Mar. 1, 1909, to Oct. 1912, Manager of Railways, and since Oct. 1912, General Manager, Dominion Power and Transmission Co., Hamilton, Ont. He has been a member of the executive committee of the association for several years, and was Vice President for 1915-16.

The Ontario Government and Hydro Railway Construction.

Some dissatisfaction is apparent among the member municipalities of the Hydro Electric Radial Railway Association, regarding the delay in preparation for the construction of radial electric railways, for which municipalities have already voted and entered into agreements with the Hydro Electric Commission of Ontario, to build. The executive committee of the association communicated with the Ontario Premier on the subject recently as follows:

"Railway Bill 167, of 1916, has one commendable feature in clause 4, in which the municipal corporations are prohibited from selling publicly owned railways, but outside of this and the legalization of agreements as between the municipalities and the Commission, the act seems to have been entirely uncalled for. While we agree with you that under the present conditions of labor and prices of materials it would be impossible actually to construct railways at this time, we believe, from personal investigation, that there could be no better time to purchase rights of way and complete surveys. It would appear to us that the general effect of the above bill and of other legislation enacted at the last session has been completely to paralyze, for the time being, the hydro electric railway programme, thus not only holding up the project temporarily, but completely defeating the wishes of the Ontario municipalities as evidenced by

the tremendous numbers representing these municipalities on the deputation, the enormous majorities piled up in favor of the agreements with the Commission, and the widespread interest and enthusiasm shown on every platform throughout the Province. We would especially call your attention at this time to the many resolutions, memorials and petitions presented to your honorable council during the last two or three years, asking for immediate action in regard to this project. We believe that, while nothing should interfere with the bending of every energy to the successful conclusion of the present war, we should still, at this time, have an eye to the future needs of the Province and prepare for the time when peace is finally concluded. We feel that this can be accomplished in no better way than by the passing of railway bylaws for such lines as the Commission assures us would be profitable, complete the surveys and purchase the rights of

E. P. Coleman
General Manager, Dominion Power and Transmission Co. Ltd., and President, Canadian Electric Railway Association.

way for same so as to be ready to commence construction as soon after the close of the war and the return of our soldiers as may be deemed expedient."

It is held that though the Commission has full power to deal with the matter of right of way purchase, it is necessary for an order in Council to be issued before such matters can be financed, and that the Government has indicated that nothing of this kind will be done until the conclusion of the war. The Attorney General stated Aug. 16, that in his judgment, a section of the act permits the Government to authorize the Commission to purchase right of way and do the necessary financing, but if there is a technical defect regarding the issue of bonds by the Commission, to cover the purchase, it would be easy to remedy it by the issue of a special warrant.

London & Port Stanley Ry. Operating Results, Etc.

Sir Adam Beck, speaking at the Irish Benevolent Society's dinner at Port Stanley on Aug. 16, gave the following comparative figures of the operation of the

London & Port Stanley Ry. for July 1915 and 1916 respectively:

Passenger revenue	\$12,365.95	\$24,000.00
Freight and miscellaneous revenue	11,076.00	17,000.00
Incline railway earnings ..		7,000.00
	\$23,441.95	\$42,700.00
Operating expenses	\$14,659.27	\$18,000.00
Fixed charges	5,340.00	7,000.00
	\$19,999.27	\$25,000.00
Net earnings	\$3,442.68	\$17,700.00
Passengers carried	63,739	165,074

Sir Adam also made the following statements:—The rates of fare in July, 1916, were 22% lower than in July, 1915, and the rate of wages has been increased 12%. The Pere Marquette Rd., during its last year's lease of the L. & P. S. R., carried 132,699 passengers, while the London Railway Commission for the 12 months just closed carried 548,316. At the January elections the people will have to decide whether they will proceed with the recently evolved plan to double track 12 miles of the road, in order that the greater traffic that is constantly coming to it may be accommodated. More equipment, including motor cars and trailers, are also required. The commissioners propose to erect before next summer a large modern bath-house at Port Stanley, out of surplus earnings. Further lavatory accommodation will be provided on the hill, and refreshment booths, under the road's management, will provide for the people at prices that will protect pleasure seekers from being fleeced. Sir Adam is in favor of building a large grain elevator at Port Stanley.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry., and allied companies:—

	June 1916	June 1915	June 30, 1916	June 30, 1915
Gross	\$ 529,078	\$498,093	\$6,602,624	\$7,306,563
Expenses	472,679	494,315	5,748,842	5,994,212
Net	56,399	3,778	853,782	1,312,351

The percentage paid to the City of Vancouver, on the gross earnings there during July, was \$3,473.68, a decrease of \$645.42 as compared with July 1915. The number of passengers carried was 2,242,448X against 2,325,686 in July 1915.

London Street Ry.—

	June 1916	June 1915

Net	87,571	84,645	630,508	721,644

Answers to Questions on Electric Railway Topics.

Following are some questions sent to the American Electric Railway Association's question box, with replies thereto, contributed by Canadian electric railway officials.

Snow Plough Operations.—An unusually heavy fall of snow during the past winter along our lines (interurban) has brought out forcibly certain defects in our snow fighting methods and apparatus. We are anxious to discover how other companies meet similar situations. (a) How should the mould boards of ploughs be designed so as to lift the snow high enough to throw it over the banks that form on the sides of the track? (b) Should not the frames of trucks on snow ploughs be above the journals instead of below? (c) What is the proper clearance for motors on snow ploughs and how is it possible to give such clearance as will avoid impeding the progress of the plough? (d) Has any substitute been found for the rattan, commonly used in sweepers? (e) How can the bottom of the scoop, surrounding the fan in a rotary plough, be prevented from riding on packed snow and so almost lifting the trucks from the rails and stalling the plough. (f) Can a rotary plough be used with thawing snow? We found under these conditions that the fan was not able to throw out the damp snow and consequently stalled until the snow was shovelled away. (g) Have any member companies used apparatus equivalent to the flangers used by steam railways? If so please describe and give details.

M. W. KIRKWOOD, Superintendent, Galt, Preston & Hespeler St. Ry.—(a) Our experience has been that the nose of a plough should have a long gradual slope so as to lift the snow well up before attempting to throw it, otherwise the snow is merely pushed out. (b) We believe the frame of the truck should be above journal boxes rather than below. (c) The motor should be at least 3 to 4 ins. above the top of rail and we allow the bit of snow plough to go within 1 in. of top of rail. This height is governed by 1 in. renewable wearing shoe attached to the under side of the plough bit and allowed to slide on the rail except at frogs and switches. (d) Our experience has been with rattan only, and we are not familiar with any substitute. (e) Do not allow snow to pack above top of rails. (f) Have not had experience with rotary snow ploughs. (g) We have used a flanger similar to the Ray snow flanger, manufactured by Railway Appliance Co., Chicago, with very satisfactory results.

(Considerable information previously sent in response to these questions, by W. G. Murrin, General Superintendent, British Columbia Electric Ry., Vancouver, was reproduced in our August issue, pg. 334.—EDITOR.)

Designation of "One Man" Cars.—It seems desirable that some other term than "one man cars" be used to designate this class of rolling stock. Have members any suggestions?

A. GABOURY, Superintendent, Montreal Tramways Co.—Would suggest "front end" car, signifying that entrance, exit, payment and employe are at that end. Another suggestion may be "pay front" for one man car, the regular car being known as near side car.

Classification Lamps.—Have any member companies used electrically lighted classification or marker lamps? If so,

are the lamps lighted from the trolley circuit or a storage battery or a combination of both? When electrically lighted markers are used, is it necessary or desirable to carry an oil lamp in addition?

A. GABOURY, Superintendent, Montreal Tramways Co. Have not used electrically lighted lamps, but would consider oil lamps an essential addition for use in emergency.

Car Mileage Registration.—Have any member companies considered the use of a mechanical device, similar to automobile odometers, for the registration of car mileage? Is such a device desirable?

A. GABOURY, Superintendent, Montreal Tramways Co. Have not used considerable instruction of car men so as to ensure cutting out of the car barn or yard mileage, or pull-in mileage. Clerical labor compiling totals would be as great as in present method, or possibly greater.

Code of Conduct for Platform Men.—Have any member companies prepared anything of this kind to supplement the book of rules, or do they think such a book feasible?

A. GABOURY, Superintendent, Montreal Tramways Co.—We issue a little telling them what the company expects of them as regards discipline, personal appearance and courtesy. This is followed up by personal letters to our men's homes, and periodical talks to them in their stations on the same subjects and on their relations to the public as representatives and salesmen of company.

Electric Railway Notes.

The Guelph Radial Railway, which is owned by the City of Guelph, Ont., has advanced conductors' and motormen's wages 1c an hour, making the minimum wage 23c.

The Sandwich, Windsor and Amherstburg Ry. has recently received 2 single end, single truck city cars, each 21 ft. long, similar to those already in service, from the Preston Car and Coach Co.

The Quebec Ry. Light, Heat & Power Co., during the exceedingly warm weather, gave free rides round the city and out of it towards Sillery, to mothers and children from the congested districts of the city.

The Dominion Power and Transmission Co. has recently received 10 single end, double truck city cars, similar to those already in operation on the company's lines in and about Hamilton, from the Preston Car and Coach Co.

Winnipeg, Man., Electric Ry. employes who have been in the service for 10 years and over, held a "special car" picnic to Selkirk, July 27. There are said to be over 300 of these veteran employes.

The Winnipeg Electric Ry. has agreed with the St. Vital Council that for the future one fare only will be collected from any point in the city to the terminus at St. Vital Road, instead of the double fare heretofore charged.

The Port Arthur Electric Ry. is experimenting with a one-man operated car on its Arthur St. run, with a view to its permanent adoption. The problem is to find out how to get the best service, consequently several different plans for routing the car are being tried.

The London and Port Stanley Ry.'s freight traffic is reported to be steadily increasing. An average of 30 cars a day is being handled from the Marquette and Bessemer car ferry landing at Port

Stanley, Ont., and an increasing traffic is being handled from the Michigan Central, Pere Marquette, and Wabash railroads.

Montreal and Toronto people have acquired the controlling interest in the Algiers Ry. and Lighting Co., a subsidiary of the New Orleans, Southern and Grand Isle Ry., Louisiana, U.S. The company's franchise and property was sold under an order of court, the concern being in the hands of a receiver.

The Sarnia, Ont., St. Ry. is arranging a new contract for hydro electric power with the city. It is said that under the new contract, which will be for an increased quantity, the company will pay a higher rate, but there will be a reduction in the amount to be paid for changing plant. Under the existing contract the company was to provide \$20,000 for changing machinery.

Montreal Tramways Mutual Benefit Association.

Following are extracts from the report for the year ended April 30:

SUMMARY OF RELIEF WORK.	
Members disabled through sickness or injury	1,306
Visits made by physicians to disabled members	639
Consultations given by physicians to disabled members	8,301
Prescriptions issued	6,096
Paid for sickness and injury	\$12,548.10
Paid for medicine	1,973.33
Paid for pensions	1,350.00
Paid for withdrawals	668.95
Paid for death and burial insurance	9,233.35

Twenty members died, 1 Mechanical Superintendent, 2 clerks, 1 inspector, 6 conductors, 7 motormen, 1 storage battery attendant, 1 foreman and 1 hillman.

The committee reports the expression of gratitude from the beneficiaries of deceased members for the prompt payment of the death and burial benefits.

During the year 3 members requested to have their benefits commuted, which, was agreed to by the committee.

The committee gratefully acknowledges having received from the Montreal Tramways Co. \$14,255.73, which added to the fees and dues received from the members, viz., \$16,849.50, and the interest received on investments and bank deposits, amounting to \$9,258.37, made a total revenue for the year of \$40,363.60, the expenses being \$35,210.71, leaving a surplus of \$5,152.89.

Montreal Tramways Co's Franchise.

A report upon the recent proposal submitted to the Montreal City Council by E. A. Robert, President Montreal Tramways Co., prepared by city officials was said to be ready for presentation to the Board of Control at the regular meeting, Aug. 21. A bare quorum was present at the meeting, and the report was not brought up. It was decided to ask the company to send representatives to the Board meeting on the following day. On Aug. 22, E. A. Robert, President, and J. L. Perron, Solicitor for the company, were present. When the matter came up it was decided to begin the discussion Aug. 29, and to carry it on every Tuesday and Thursday until completed. \$1,000 was voted for a stenographic report of it. The city's traffic engineer was instructed to produce all plans and reports on the tramway situation made in 1914 and 1915; and all public bodies and private individuals interested in the matter were invited to send in suggestions which might help in reaching a solution.

Marine Department

Dominion Government Dredge for St. Lawrence Ship Channel.

The Marine and Fisheries Department is having constructed a twin screw, self propelling centre ladder, combined hopper and barge loading dredger for service on the St. Lawrence ship channel below Quebec. The principal dimensions are as follows:

Length between perpendiculars	284 ft.
Length overall	292 ft.
Depth moulded	20½ ft.
Mean draft with hoppers full	16½ ft.
Dredging depth	57 ft.
Angle of bucket ladder	45 degrees
Angle of discharge chute	25 degrees
Capacity of hoppers	30,000 cu. ft.
Dredging capacity per hour	1,500 tons
Speed per hour	10 knots

The vessel, which will be the largest of its kind in Canada, will be capable of dredging and discharging into steam hopper barges on either side, or into its own hopper, 1,500 tons of material an hour when working at a depth of 57 ft.

The propelling and dredging machinery will consist of 2 sets of triple expansion, inverted, direct acting, surface condensing engines, each with one high pressure and one low pressure cylinder, working on three cranks and each driving a line of propelling shafting or dredging gear as required, fitted with steam reversing gear and all necessary accessories. The dimensions are as follows:

H. p. cylinders	17 in. dia.
I. p. cylinders	27 in. dia.
L. p. cylinders	43 in. dia.
Stroke	27 in.
Two independent air pumps	
..... 18 in. dia. x 10 in. stroke	
Two vertical single direct acting feed pumps, 9½ in. steam cylinder 7 in. water cylinder, 18 in. stroke.	
Two independent centrifugal circulating pumps..	
..... 7 in. bore	
One duplex bilge pump	6 in.
steam cylinder, 6 in. water cylinder, 6 in. stroke	
Two duplex general service pumps .7 in. steam cylinder, 4½ in. water cylinder, 8 in. stroke	

Two marine cylindrical horizontal single ended boilers will be installed, working at a pressure of 180 lbs. a sq. in., each having 4 furnaces and of the following dimensions:

Diameter inside	15 ft. 6 in.
Length of ends at top	11 ft. 6 in.
Furnaces inside dia.	3 ft. 6 in.
Tubes outside dia.	¾ in.

The furnaces will be of the Morison suspension type.

Each boiler will be fitted with a patent temperature balance. All doors on man-holes will be of patent design. The usual water gauges, steam gauges, salinometer cocks, scum pans, safety valves and zinc slabs are fitted in each boiler. An ash ejector of the latest type will be fitted and worked in connection with the general service pump.

The dredging machinery will be of the most improved design and construction, the gear in the engine room being fitted with 2 speeds working from either propelling engine. All wheels will be of cast steel with double helical teeth machined on points and edges. All gearing shafts will be of the best forged steel with large bearing surfaces and collars to prevent lateral motion. The tumblers will be of cast steel, the top one having 5 sides and the bottom one 6. Patent protection boxes will be fitted to the bottom tumbler shaft and special oil connections installed. The rollers will be of cast iron, chilled on the outside having forged steel spindles covered by manganese steel sleeves. The bucket backs

will be of cast steel specially designed and constructed. The capacities of the 2 sets will be 30 cu. ft. and 54 cu. ft. for clay and soft material respectively. The shells will be of mild steel and the lips for the smaller bucket will have four teeth. The links will be of forged steel made reversible, and hunting links will be supplied of similar design. The bucket pins will be of forged manganese steel, the heads being square and recessed into side of back. The hoisting gear for the bucket ladder will consist of 2 blocks, each having 5 sheaves 5 ft. in diameter and steel wire rope. Two sets of triple purchase blocks and 6-inch manilla rope falls with all necessary shackles, etc., will be supplied for emergency use. The hoisting engines will be of the vertical double cylinder high pressure type, having cylinders 13 ins. in diameter by 13 ins. dia. by 15 in. stroke geared, to allow for hoisting the ladder at a speed of 10 ft. a minute with steam at 90 lb. pressure. Two powerful mooring winches will be fitted on board, one forward and one aft. These winches will have plain drums for the head and stern wires, and whelped drums for the port and starboard chains arranged to work independently by friction clutches. The hopper space will be divided into 10 divisions each being fitted with a door constructed of white oak, and protected by steel plates, and operated by a heavy winch of the usual hopper door winch design. The lifting gear will consist of chain of heavy scantlings, working over pulleys, fitted on hopper beam and connected to door by eye plates. The hoppers will be fed by two chutes, one forward and one aft, on both sides, each division being filled by the shutting of its directing door which will be of heavy design.

A complete system of electric light will be provided, each room being supplied with the usual fittings and all deck clusters navigating and dredging lights being of the usual requirements. The generating set will be in duplicate, coupled to high speed enclosed forced lubrication compound engines, developing 43 b.h.p. at 50 r.p.m. There will be 2 dynamos, each capable of generating an output of 25 k.w. at 110 volts. The steam steering gear will be in the engine casing and connected to steering column on bridge by chains and controlling rods. The engine will be of the combined hand and steam type. The navigating and dredge masters' bridges will be on main and fore framing respectively, each being fitted out complete with steering column, compass, engine room dredging and winch telegraphs.

The accommodation for officers and men will be very complete, the former being located on the bridge deck, the latter on the lower deck. Each officer will have his own room with the usual fittings in a vessel of this class. The bathrooms, galleys, messrooms, and pantries will be on the bridge deck and all fitted out with due regard to the service intended. The crew will be divided into separate rooms for seamen, firemen, oilers, etc., each room being fitted up with the usual beds, seats, lockers, etc.

A large crane capable of lifting the lower tumbler, or one of the buckets,

will be fitted on the forecastle deck so as to be available for overhauling purposes. A large cold storage room will be fitted up with all necessary fittings for the preservation of supplies.

The hull structure will be in excess of Lloyd's requirements for the 100 A.1 class in which the vessel will be registered, and nothing is being spared to add strength and rigidity to the vessel, to resist the heavy stresses which will be brought to bear on the various members during dredging operations. The vessel will be divided into 14 watertight compartments, each being pumped by a separate steam suction. Protection to the shell will be by 2 large fenders extending round the vessel and having vertical fenders between and chafing posts in way of barge moorings. The sanitary, steam heating and water systems will be complete in all details, each room being supplied with all necessary accommodation. The life saving appliances will be in accordance with the latest rules of the Canadian Steamship Inspection Act, and will include 2 life boats, an anchor boat and a dinghy. The fire service will be complete in all details, with full amounts of hose, buckets, hatches, fire extinguishers, etc.

The dredge, the completion of which has been delayed owing to war conditions was designed by Charles Duguid, naval architect, Marine and Fisheries Department is in an advanced stage of construction at the Canadian Vickers works, Montreal, and is expected to be launched during the autumn so that dredging operations can be commenced in the early spring of 1917.

Shipping Documents and Censorship Delays.

Owing to complaints which have been made as to the delay caused by postal censors in dealing with shipping documents passing through the mails, the Port and Transit Committee, Admiralty House, London, Eng., has issued a notice as follows:—"Difficulties are being caused in arranging the removal of goods from docks, wharves and warehouses, by the late delivery of shipping documents, necessary for customs clearance, sent through the post and therefore passing through the Postal Censors' department. This committee has been in communication with the authorities of the Postal Censors' department, and has arranged, in consultation with them, that if such documents are posted in envelopes distinctly marked as containing shipping documents only, the staff of the Postal Censors' department will endeavor to deal with them with special expedition. Envelopes containing these documents should be clearly marked 'Shipping Documents' by means of a rubber stamp and not by handwriting. Shipping documents are defined to be,—bills of lading with or without drafts, invoices, manifests, parcel receipts and certificates of origin or destination. The enclosure of other correspondence in an envelope so marked is forbidden, and it is essential that this restriction be strictly observed. Any departure from this rule will assuredly cause greater delay."

The Panama Canal Act and Steamboats with Canadian Connections.

The Interstate Commerce Commission has dealt with a number of applications under the Panama Canal Act, covering the operation of certain steamboat lines controlled by railway companies, for extensions of time under which the railway companies can continue to operate or control the steamboat lines, and for declarations that such operations are not in contravention of the Panama Canal Act. Among these companies, are the following, which have connections, directly or indirectly, with Canadian points.

Delaware and Hudson Boat Lines.—The Delaware & Hudson Co. operates a railway between Rouses Point, N.Y., and Wilkes-Barre, Pa., with branch lines into the Adirondacks and elsewhere. It controls the Champlain Transportation Co., through the ownership of practically the whole of the capital stock, and indirectly controls the Lake George Steamboat Co., the former maintaining a service on Lake Champlain, and the latter on Lake George. The Champlain Transportation Co. operates three steamboats, Chateaugay, Ticonderoga and Vermont, all being too large to permit of passage out of the lake by canal, and are primarily engaged in passenger transportation, of which a large proportion consists of tourists, a full service being given during June, July and August. By means of these vessels, the D. & H. Co. competes to some extent with the Rutland Rd. and the Central Vermont Ry. on the east side of the lake, and neither of these companies has asked for through rates and joint rates, and the transportation company has intimated that should either of them ask for such routes and rates, it would be the policy of the company to grant them on a reasonable basis. The freight handled by the vessels may be regarded as negligible. Considered by itself, the operation of the steamboats is not financially successful, and last year they were run at a loss. The facts show that the company's operations are purely incidental to its real relation to the D. & H. Co., which is to provide an alternate route for summer tourists travelling over its rail lines, and are simply a means by which the company is enabled to enlarge its passenger traffic between New York and Montreal and intermediate points. The Lake George Steamboat Co. has three steamboats, Horicon, Mohican and Sagamore, and the passenger traffic there is purely of the summer tourist variety. In the course of the hearing some reference was made to some apparent irregularities in a local rate tariff, involving preference to four individual shippers, and the company undertakes to correct this. The company had doubts as to the Commission's jurisdiction over the Lake George Steamboat Co., on the ground that Lake George is wholly within New York State, but it appeared to be obvious that the company was engaged in interstate business, and apart from that the wording of the Panama Canal Act left no room for controversy on that point. The extension was granted.

Central Vermont Transportation Co.—

The Central Vermont Ry. owns the entire stock issue of this company, and over 70% of the C.V.R. stock is owned by the G.T.R. The C.V.R. operates railway lines from St. John's, Que., and Rouses Point, N.Y., through Vermont, Massachusetts and Connecticut to New London, where connection is made with the C. V. T. Co.'s boats for New York City. Some years ago the C.V.R. desiring to build a line

from Palmer, Mass., organized the Southern New England Rd. Corporation and the Southern New England Ry. Co., and holds the entire stock of these two corporations. It also caused the C. V. T. Co. to increase its capital stock from \$200,000 to \$1,000,000, and to have built two combination passenger and freight steamships for operation between New York and Providence. It further guaranteed the principal and interest of \$1,000,000 5% gold bonds issued by the C. V. T. Co., of which it has already paid \$350,000. The C. V. T. Co. now operates between New York and New London two freight steamers, and has docked at New London, awaiting the completion of the Palmer-Providence line, the two new steamers referred to. For the purposes of this investigation the existing and the proposed boat services may be considered as though operated or proposed to be operated directly by the C.V.R., for while the C. V. T. Co. is a distinct legal entity and has an organization, it has several officers in common with the railway, does no transportation business in its own name, files no tariffs, issues no bills of lading, solicits no traffic, and receives none except such as is delivered to it by the petitioner, and handles no funds, its accounts being kept and expenses paid by the railway. It is apparently allowed only sufficient divisions to cover expenses. No dividends have been declared on its stock. The C.V.R. leases pier 29, East River, and pays all of the expenses in connection therewith, and also of solicitation. The traffic handled by the C. V. T. Co. from June 28, 1909, to Feb. 28, 1916, was:—

	From New York Tons	To New York Tons
June 28, 1909, to June 30, 1910..	273,228	85,196
Year ending June 30—		
1911	244,582	88,666
1912	260,660	69,065
1913	288,214	57,375
1914	331,590	58,766
1915	332,623	47,491
Differential	165,673	37,890
July 1, 1915, to Feb. 7, 1916.....		
Total	1,896,570	444,449

The proportion of this traffic which originated at or was destined to points on the C.V.R. is not shown, but a large portion of it was interchanged with the G. T. R. The decrease in the tonnage to New York is explained to be the result of the cancellation in Sept., 1911, of joint rates, which have been republished since the hearing, between New York and points on the Boston & Maine Rd. This cancellation, it was claimed, caused a loss in revenue of over \$100,000 a year, due to the diversion of traffic to other routes. The rates of the water-and-rail route of the C.V.R. and G.T.R. from New York to Chicago, Ill., and other central freight association points were, prior to the recent general increase, lower than the all-rail rates by the following differentials:

Class	1	2	3	4	5	6
Differential	10	8	6	4	4	3

Between C.V.R. stations and New York there are no differentials in favor of the rail-and-water routes. The C.V.R. participates in through routes and joint rates between New York and points on its line in connection with the B. & M. Rd. from South Vernon, Vt., to Springfield, Mass., and the N. Y., N. H. & H. Rd., between the latter point and New York, and to a limited extent in connection with the latter to and from New London. From points south of Brattleboro, Vt., there are no joint rates to or from New York in connection with the New Haven except on

such traffic as cannot, because of its nature, move by boat. On forest products and other heavy low grade traffic the C. V. R. also participates in through routes and joint rates from points on its line to New York in connection with the N. Y. C. & H. R. and West Shore Rds. and intermediate carriers. The testimony is that all traffic which can be economically and satisfactorily handled by a rail-and-water route is routed in connection with the boats of the C. V. R. Co. unless specifically directed to the contrary by shippers. At four points on its line the petitioner meets competition from the New Haven, which has both all-rail and rail-and-water routes to New York, and at Norwich, Conn., from the Norwich & New York Propeller Co., an independent line operating a triweekly service in each direction between New York and Norwich and New London. A number of shippers from points on the C.V.R. testified as to the reliability and generally quick and satisfactory character of the service furnished by it. There was no testimony by shippers or others in opposition to the application. There are now two boat lines between New York and New London in addition to the one under consideration. One, operated by the New England Steamship Co., a subsidiary of the New Haven, furnishes a daily service, and, with the other water lines operated by that company and also by the Hartford & New York Transportation Co., another subsidiary of the New Haven, is now the subject of an investigation upon an application under the Panama Canal Act. The other, known as the Chelsea line, is the one above referred to, operated by the Norwich & New York Propeller Co.

The President of the C.V.R. testified that it was its purpose to complete as soon as practicable the line from Palmer to Providence, on which more than \$6,000,000 has been expended. Since Aug., 1913, when work was resumed after an interruption, due, it is claimed, to financial difficulties, the expenditures on the portions in Massachusetts and Rhode Island have amounted to \$2,612,870.89 and \$1,206,642.14, respectively. Providence is now served by three steamer lines to New York, namely, the New England Steamship Co., the Hartford & New York Transportation Co., and a line independent of railway control, the Colonial Navigation Co. The wharves of these three lines are on the east side of the harbor, and the boats of the transportation company will land on the west side. While ordinarily there might be some question as to the wisdom of passing upon an application for permission to install a water service in a case where the date of its inauguration is so uncertain, the Commissioners think that the circumstances and conditions here appearing justify action at this time on that portion of petitioner's application. Upon the inauguration of the New York-Providence service there would seem to be no question but that the petitioner might, in connection with either of its steamer lines, compete with the other, for it would have two rail-and-water routes between New York and points on its own line and on the G.T.R. and its connections. The Commissioners therefore deem it unnecessary to enter into a discussion as to whether or not petitioner does or may compete with the C. V. T. Co. under present conditions. However, in order to maintain a satisfactory route from New York to the west at rates substantially lower than those ap-

plicable via the all-rail routes, it would seem to be necessary for the C.V.R. which serves no large city with its own rails, to operate, or control the operation of, boats between New York and New London; and, if the extension of the rail line to Providence is to have the effect of increasing the value of the route of the C.V.R. and the G.T.R. between New York and the west as a competitive force, it would likewise seem necessary for the petitioner to operate, or control the operation of, boats between New York and Providence. The application was granted.

Boston and Maine Rd.—This application covered the operation of the s.s. Washington on Lake Winnepesaukee in New Hampshire. The traffic carried on is purely a summer one and local. On account of its size, the vessel cannot serve more than 6 of the 32 landing places on the lake, the balance being covered by other independent companies. The company has offered to sell the vessel, but makes a stipulation that the service is to be maintained at its present efficiency for the summer residents. The company also owns the s.s. Lady of the Lake, operating on Lake Memphremagog, situated partly in Vermont and partly in Quebec. This vessel, which is registered in Canada, touches at one port only in the U.S. The B. & M. R., in connection with the C.P.R., publishes a joint fare of \$1.75 between Newport and Magog at the head of the lake in Canada, the rail distance being 59 miles. The distance by water is approximately 30 miles and the fare is 85c. There is a competitive company, the Memphremagog Navigation Co., which also serves Newport. No request has been made to the B. & M. R. for through routes and joint fares in connection with that company, and it was intimated that if such request were made, it would be granted. The B. & M. R. has endeavored to sell the vessel, and would do so now, if a purchaser could be found. It was decided that so long as the vessels were operated as at present, they were in the public interest, and the application was granted.

Maine Central Rd.—The company operates a steamboat service from Mount Desert Ferry, Me., to various points on Mount Desert Island and on Frenchmen's Bay, and a similar service from Rockland, Me., to various points in Penobscot Bay, and between Bath and Woolwich on the opposite sides of the Kennebec River. The operation of vessels on the last named route are possibly within the Panama Canal Act technically, but as their continued use by the Maine Central violates none of the provisions, it need not be further considered. The Mount Desert line is run chiefly for the benefit of summer traffic, as is also the Penobscot Bay service, both of which, by themselves, were operated at a loss during 1915. The Eastern Steamship Co., an independent line, runs vessels through Penobscot Bay, calling at the same ports, and it was shown that all the traffic could not be handled by the vessels of either company alone, and that the Eastern Steamship Co.'s service has not been modified since the B. & M. service was inaugurated. The application was granted.

During the continuance of the war, the regulation of the internal traffic in Halifax harbor is under the direction of the Department of Naval Service, as represented by the Captain Superintendent of H. M. C. Dockyard. All masters of vessels, pilots and all other persons concerned must obey the instructions issued by him or his representatives.

The Submersible Vessel Deutschland.

The recent arrival and departure of a German submersible vessel at Baltimore, Md., have occupied considerable space in the daily press, and comments thereon have in many cases been made in sheer ignorance as to the actual value to be placed on such trips. The whole matter should be viewed in its true perspective, and neither magnified into an abnormal achievement, nor minimized into something of no account. If it was intended to prove that it was possible for a vessel to cross the Atlantic under water, then the trip failed, as it was not claimed that the trip was made under water for the whole way, somewhere about one third of the distance being accomplished under water. Apart from this, it is claimed in England with some show of authority that submersible vessels had already crossed the Atlantic, from Canada to England, last year, without fanfare of trumpets. Again, if it is intended to show that blockade running can be successfully carried out by the Germans, the success achieved so far is infinitesimal, and at a really prohibitive cost. Information which has been made public, as to the cargo and of the vessel itself is vague and contradictory, so that it is not possible to build correctly on what has been obtained. Some calculations have been undertaken by Engineering, London, Eng., with the information it had at hand, and these show that submarine navigation with vessels of the type used is a commercial and financial impossibility. Assuming a surface displacement of 2,000 tons, with a length of 300 ft. and 30 ft. beam, with a collective b.h.p. of 2,600, the surface speed would be 14 knots an hour. With these dimensions a deadweight cargo capacity of 800 to 1,000 tons is impossible, and under the most favorable conditions regarding disposition of weight in the vessels and her machinery and stores, a greater cargo than 350 tons could not possibly be carried by a submersible vessel of 2,000 tons surface displacement. The hull, including the ballast keel, water and air service, auxiliaries, electric cables, fittings, etc., will weigh about 1,100 tons. There is of course a difficulty in determining exactly the electrical equipment for propulsion when submerged, and the power available and the speed obtained when submerged, but there is room only for a slight percentage of error. The captain stated that he proceeded 90 miles under water without requiring to charge his accumulators, so that his radius of action is provided by his storage batteries. The machinery, including the main Diesel engines, electric motors, storage batteries and lubricating oil, would approximate 260 tons. The capacity of the fuel oil tanks has been stated as 190 tons. The crew, fresh water, provisions and other stores cannot be put at less than 60 tons. The remaining weight, including trimming ballast, gun and ammunition, which it is stated were carried for protection, may be taken as 30 tons. The total of the weights as given, shows that out of a 2,000 ton surface displacement, there is left only 350 tons as cargo deadweight carrying capacity. The weights allowed give an approximate radius of action of 4,500 nautical miles at 14 knots an hour, and 6,650 nautical miles at 11½ knots. Assuming the reserve buoyancy as 55% of the surface displacement, the displacement when submerged would be about 3,100 tons.

Stranding of the s.s. Arachne Investigated.

An investigation into the causes of the stranding of the British s.s. Arachne, near Point Plate, Miquelon Island, June 20, was held at Quebec, Que., recently, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander E. G. V. Elliott, R.N.R., and Lieutenant J. A. Murray, R.N.R., as nautical assessors. The Arachne was bound from Montreal with a cargo of wheat in bulk and bags. The master, G. R. Sargent, stated that the weather was thick intermittently, and he was on deck continuously, with the officers of the various watches. He believed he heard the horn at Point Plate, but did not know it to be that horn, taking it to come from a sailing vessel, and believing he was on a right course, there was no influence to cause him to go in a different direction. The telegraph remained at full speed until the time of the stranding, but verbal instructions were given to ease off steam, which was done. On seeing a dark shadow ahead, he gave orders for full speed astern, but the vessel grounded. After this orders were given to launch the boats, and soundings were taken when it was shown in his estimation that the vessel had run about one third of her length on the rocks. He came to the conclusion that she could not be refloated without assistance, and proceeded to St. Pierre. On his return 800 tons of grain were jettisoned and 1,200 tons put into lighters, and with the assistance of other vessels his vessel was released eight days after she struck. Evidence of the other officers shows that they accepted the courses given to them by the master, and did not verify them by consulting the chart.

The court decided that in view of the master's conduct, and taking into consideration his long service without accident, also his frank confession of the facts as they occurred, without any attempt at prevarication, it would show its appreciation of such evidence and his long good record, by not retaining his certificate, but censuring and reprimanding him severely for the non-accomplishment of simple navigation principles, which, although ordinary, are necessary. The court also had in mind the scarcity of experienced masters occasioned by the abnormal conditions existing. The court also cautioned the master that he should see that his officers have sufficient ambition to ascertain for themselves that the courses given them are right, for the benefit of all concerned. Regarding the first and second officers, J. E. Turner and E. Evans, who are men of long experience in sailing and steam vessels, the court was astonished to note the lack of ambition displayed on their part, in accepting the information conveyed to them by the officer being relieved, as to the course, without ascertaining if it was one which would carry them safely through the watch, and in view of this lack of interest, they were warned and reprimanded severely. The conduct of the engineers was beyond reproach.

The Robert Reford Co. has been appointed agent for the Compagnie Generale Transatlantique, at Halifax, N.S., in place of S. Cunard & Co., whose shipping agency business there has been taken over.

The British s.s. Athos, which grounded near Trepassey, Nfld., recently, was temporarily repaired there, and then taken to St. John's, where she was docked for overhauling and complete repairs.

Rebuilding the s.s. W. C. Moreland.

There is proceeding at Superior, Wis., a combined new construction and repair job of unusual character. The salvaged stern section of the s.s. W. C. Moreland, wrecked and sunk nearly six years ago, is being repaired at the same time that a new forward end is being built. The two sections will be joined and the rebuilt 600 ft. vessel completed in time to enter the autumn lake trade. The after end was raised five years ago and after fruitless efforts were made to sell it, was again sunk. The same conditions which operated to recall to salt water service many hulks that had apparently sailed for the last time, also gave renewed value this year to this wreck, as it rested on the bottom of Lake Huron. The assurance of an enormous freight movement in 1916, culminating in the autumn when grain shipments begin their eastward journey, resulted in the stern again being raised. After being sold twice, it was placed in drydock at Superior under rush orders to rehabilitate the vessel and to commence the immediate construction of a new bow. The W. C. Moreland was launched originally July 27, 1910, at Lorain, Ohio, and was built for the Johns & Laughlin Steel Co., Pittsburg, Pa. Her original dimensions, which she will maintain in her reconstructed form, were 600 ft. over all, 580 ft. keel, 58 ft. beam and 32 ft. deep. Her carrying capacity was 12,000 tons.

The wreck which condemned her to almost six years of idleness, occurred on her maiden trip. Down bound with a cargo of 10,700 tons of iron ore, she stranded on the rocks at Eagle Harbor, Lake Superior, Oct. 18, 1910. The site of the accident is one of the most dangerous on the lakes, owing to its exposed position. Wreckers were immediately ordered to her, but heavy weather prevented work and she was abandoned by her owner as a constructive total loss on Nov. 2. At the time of the accident, she was the largest vessel ever lost on the lakes. She was broken into three parts. Breaks in the hull occurred at hatches 12 and 24. Following repeated efforts, the Reid Wrecking Co. raised the after portion of the vessel in the autumn of 1911. After being successfully bulkheaded, it was towed to Detroit, in Sep., 1912. The salvaged section was 292 ft. long. Unsuccessful efforts were made to sell the recovered section. With steel selling at the comparatively low prices of 1912, it was cheaper to build a new boat. The wreck, therefore was sunk in shallow water where she rested until last spring. The great increase in steel prices, with consequently higher costs for new vessels, coupled with the enormous demand for tonnage to move the record breaking 1916 freight, united to enhance the value of the salvaged section. R. M. Wolvin, Winnipeg, purchased her and she was raised and placed in drydock at Detroit. A few weeks ago she was towed through Lakes Huron and Superior, past the scene of her wreck, to Superior, Wis., and was sold to Canada Steamship Lines, Ltd. When completed she will sail under Canadian register.

Work on the new bow was begun in February and this section was expected to be launched in August. Work is being pushed on the after end. Both sections is expected to be ready to be placed in drydock at once, when the work of joining them will be started. Every effort is being made to complete the work in time to permit the vessel to participate in the heavy freight movement, and it is expected that she will leave Superior

on her initial trip late in September. The refitting of the stern presented some unusual problems in ship yard work, all of which were successfully met. The entire bottom of the after end from frame 125 to the engine room, about 165 ft., including the whole inner bottom construction as well as the hopper sides, was cut out completely. One arch beam or division between hatches was cut out and replaced.

All electrical equipment was replaced, the after deck house was almost completely rebuilt and all woodwork in connection with the cabins was renewed. While about two thirds of the ballast piping in the after section was utilized, it was necessary to remove practically all of it in order to permit reconstruction work on the hull. Most of the plumbing and steam pipes were renewed, the steering engine was overhauled and the steering chains and cables renewed. The boilers and engines were found to be in fairly good condition, but a great amount of overhauling was necessary.

Furness Withy and Co.'s Report.—The report for the year ended Apr. 30, shows profits, including amount brought forward, of £1,528,406 1s 4d., an increase of £743,529 4s 1d over the previous year. The half yearly dividend on the preference shares was paid Nov. 1, and three quarterly dividends of 10% per annum, free of income tax, have also been paid, leaving an available balance of £346,531 1s 4d. Of this amount, £350,000 has been transferred to depreciation account, and £300,000 has been allocated to a trade contingency fund, bringing this fund up to £500,000. This fund was inaugurated to strengthen the company's position and in order to meet any competition which may arise after the war. A further £20,000 was appropriated for division among the masters, officers and engineers of the company at the end of the war, and it was decided to pay a bonus of 10% free of income tax on the ordinary shares. After the payment of the foregoing, £395,281 1s 4d was carried forward to the current year's accounts.

Claims re Loss of s.s. Titanic.—Final judgment was delivered in the Federal District Court, New York, July 31, disposing of all the claims against the Oceanic Steam Navigation Co., in connection with the loss of the s.s. Titanic, Apr. 15, 1912. The original claims were about \$15,000,000, but were eventually reduced to about \$3,000,000. The liability of the company was limited under U.S. statute, to the amount of freight and passenger money collected for the last voyage, and for the value of the lifeboats' salvage. This was estimated by the company to be \$117,101, and this was deposited in court. A settlement was subsequently arrived at by which the company paid about \$665,000 in settlement of all claims. The judgment held the company guiltless of any privacy or knowledge as charged against it, and not liable to any extent for loss arising out of the collision.

The International Mercantile Marine Co.'s earnings for six months ended June 30 were \$33,400,000, the earnings for June being \$6,900,000. These figures represent the net operating revenue and do not cover the amounts for war tax, interest and depreciation. The war tax for the six months was approximately \$12,400,000. The balance is equivalent to \$40.50 a share on the \$51,730,000 of preferred stock, or at the rate of \$81 a share for the year. The accumulated dividends on the preferred stock amount to \$82 a share.

Purchase of St. Lawrence and Chicago Steam Navigation Co. Approved.

At a special meeting of shareholders of Canada Steamship Lines, Ltd., at Montreal, July 27, the purchase of the St. Lawrence & Chicago Steam Navigation Co.'s stock was formally approved. J. W. Norcross, Vice President and General Manager, stated that the opportunity of purchasing the controlling interest in the St. Lawrence & Chicago Steam Navigation Co. presented itself some time ago, but because they could not obtain complete control, the governors of the Canada Steamship Lines' guarantee fund declined to sanction the purchase. Later, a syndicate made up of directors of Canada Steamship Lines, purchased the stock and now proposed to turn over to the company 9,664 shares of the St. L. & C. S. N. Co. at \$187.75 a share. In addition to this amount, which represents the purchase price of the shares, the syndicate will receive an amount equal to the net earnings of the St. L. & C. S. N. Co. between Apr. 20 and July 31, the period when the property was in its hands.

A letter was read from E. H. Mussen, Toronto, protesting against the purchase on the ground that although Canada Steamship Lines had just passed through two years of the most profitable period in the history of navigation, it had only been able to pay one dividend, and that if there was any money to be expended, the shareholders should get some benefit from it. It was explained that the purchase was not being made out of earnings, but on capital account, the money at present being held by a board of governors, it having been received as insurance on lost vessels. Included in the transfer was cash to the extent of \$400,000.

Suggested Underwriters' Agent for Newfoundland.—A Newfoundland shipmaster, said to be holding a Government position, has written to a New York shipping paper relative to the desirability of the underwriters appointing an agent in the colony, so as to be in a position to act quickly in case of a wreck. The usual method appears to be to wait the arrival of a surveyor from New York before commencing salvage operations. In many cases the vessel begins to break up before he arrives, and this delay is responsible for the large proportion of total losses along the coast. Naturally, if there was a resident agent with authority to begin salvage operations whenever such are deemed advisable, a material reduction would be experienced by the underwriters in the amounts they would be called upon to pay for total losses.

The s.s. Pere Marquette No. 5, formerly owned and operated by Pere Marquette Line Steamers, Manistee, Mich., has been sold to William N. MacDonald, Sydney, N.S. She is a freight and passenger vessel and was built at West Bay City, Mich., in 1890. She is of oak with diagonal strapping on frames, bow strengthened for ice, wooden arches, bottom sheathed with iron for winter service, windlass between decks with no efficient bulkhead abaft same, complete electric light plant, triple expansion engines with cylinders 19, 30 and 52 ins. diam., by 40 ins. stroke, 1,000 i.h.p. at 84 r.p.m., and supplied with steam by two Scotch boilers 11½ by 11 ft. at 150 lbs. Her dimensions are, length 226 ft., breadth 38 ft., depth 26 ft.; tonnage 1,722 gross, 1,296 register.

Depreciation of Vessel Property

At a meeting of the executive committee of the Dominion Marine Association, at Toronto, recently, consideration was given to the Business Profits War Tax Act of 1916, and recommendations were made and forwarded in the form of a letter to the Minister of Finance. These recommendations dealt with the uniformity in returns filed under the act, with particular reference to deductions for depreciation, and the following schedule was suggested:—

- | | |
|---|---|
| (a) For steel built steam lake freighters | 3% per annum on the original cost of new vessels, including only structural additions |
| (b) Steel built barges | 5% " |
| (c) Composite steamers and barges | 5% " |
| (d) Wooden steam freighters | 7½% " |
| (e) Wooden barges, including schooners | 10% " |
| (f) Passenger boats, wooden or steel | 7½% " |
| (g) Steel tugs | 5% " |
| (h) Wooden tugs | 7½% " |

The resolution points out that this schedule is submitted as a suggestion of what vessel owners consider fair, having due regard to the many conditions governing, and that the association is fully representative of the tonnage on the inland waters of the Dominion, and is actuated by no desire to reduce unduly the contributions its members should make under the act.

Mainly About Marine People.

Aubrey McElhinney, dentist, who died in Ottawa recently, was the second son of the late Capt. M. P. McElhinney, who was on the Marine Department's staff for many years.

Capt. Gow, heretofore Marine Superintendent, Dollar Steamship Co., is reported to have been appointed Superintendent of Loading, Canadian Pacific Ocean Services, Ltd., Vancouver, B.C.

W. H. Fogg, heretofore secretary to Manager, and Stationery Agent, Grand Trunk Pacific Coast Steamship Co., Vancouver, has been appointed chief clerk in Manager's office, with duties as hitherto.

R. Richardson, who has been appointed a sub-lieutenant in the naval motor boat patrol, and has left for England, is a son of H. W. Richardson, of J. Richardson and Son, Kingston, Ont., vessel owners, and Vice President Great Lakes Transportation Co.

Robert D. Keay, General Manager, Yarrows, Limited, Esquimalt, B.C., who died recently, was appointed to that position when the company purchased the B. C. Marine Railways Co., about two years ago. He had been connected with the Yarrows company in England for 18 years prior to that.

Capt. Nilson, who has been appointed Marine Superintendent Coastwise Steamship and Barge Co., Vancouver, B.C., has been with the company since its incorporation in 1912. He was master of the s.s. Amur for some time, and on the company purchasing the s.s. Turret Crown, he was given command of her during her Atlantic coasting charter, and on the completion of that he sailed her to the British Columbia coast, by way of the Panama Canal.

Capt. Hiram Rowe, who died at Colingwood, Ont., Aug. 5, aged 72, was born at Welland, and at an early age took up sailing on tugs and barges on the old

Welland Canal. In 1869 he went to Georgian Bay in charge of the tow barge Ontario, in 1870 was appointed mate of the tug Wales, and in 1871 was mate on the s.s. Chicora, which was then sailing on the upper lakes. He subsequently acted as master of a number of tugs and retired in 1875.

Caution to Navigators re Quebec Bridge Construction.—During July the construction of two heavy steel apparatus, which will be suspended from the outer or river side ends of each of the cantilever arms of the uncompleted Quebec Bridge, was begun by the contractors. These apparatus are to be used in connection with the guiding and lifting of the centre span from scows in the river below, which operation is expected to be completed some time before the close of navigation. The maximum clear distance between the north and south apparatus when in vertical position is 636 ft. These apparatus will be a menace to navigation, as they will extend vertically from the ends of the cantilever arms to about 20 ft. above high water. The lower end of each will be marked with a red light, visible from all points of approach, and they will be suspended from the bottom end of the construction as it progresses. The main portion of this apparatus, when completed, will be drawn up shoreward close to the bottom of the cantilever arm, in which position there will be a clearance of 100 ft. above high water. During fog, vessels are specially cautioned to avoid colliding with the above apparatus, which will be supported from the extreme end of each cantilever arm.

Proposed Further Diversion of Water from the Great Lakes.—The Rivers and Harbors Bill, which among other things contained an amendment approving of an expenditure of \$5,000,000 by the State of Illinois in connection with the canal from Lake Michigan towards the Mississippi River, and restricting the amount of water to be taken from the Great Lakes, to the amount fixed by the Secretary of War in 1912, came before a joint committee of Congress at Washington, D.C., recently. The committee could not agree as to the restriction of water to be taken, and all reference to it was struck out of the bill, which leaves the matter as it was, except that the Secretary of War has had the matter brought prominently to his attention, and is likely to take steps to prevent the use of more water than was permitted in 1912.

Applications for Power Development in the St. Lawrence River.—The Dominion Marine Association's executive committee, at a recent meeting, passed a resolution calling attention to the application of the Beauharnois Light, Heat & Power Co., for approval of plans for development of power on a large scale in the St. Lawrence River, and to the association's attitude as expressed in previous resolutions that no further power concessions in the St. Lawrence be granted until the whole matter of power development be dealt with, with due regard to the requirements of navigation, and that the association be given an opportunity to consider such plans in detail, and make proposals. Copies of the resolution were forwarded to the Premier and the Minister of Public Works.

The Hudson's Bay Co. has placed its steamship Discovery, which was specially built for Antarctic exploration, at the disposal of the Admiralty, free of all cost, for the rescue of the Shackleton party who were left on Elephant Island.

Canada Steamship Lines Notes.

The s.s. Strathcona, which was in collision with the s.s. Glencoe in British waters recently, has been repaired at Middlesbrough, and is now running on charter between United Kingdom and continental ports.

The s.s. Christopher, owned in Chicago, collided with, and sank the s.s. Topeka, owned in Milwaukee, in the Detroit River, near Sandwich, Aug. 15. The wreck is lying in 30 ft. of water on the Canadian side of the river.

A dividend of 1¼% on the company's preference stock was paid Aug. 1, and it is stated that an additional 1¼% will probably be paid Nov. 1, clearing up the arrears of dividend, and that a full payment of the 7% dividend for the current year will also be made.

The steamship which is under construction for the company at Detroit, Mich., some details of which have already been given, is to be named Sir Trevor, after Sir Trevor Dawson, a member of the company's advisory board in London, England, and who is also associated with Furness, Withy & Co., and Vickers, Ltd.

In commenting on the acquirement of the St. Lawrence & Chicago Steam Navigation Co.'s vessels, By-Water Magazine states that the "Haggerty, Hostler, Matthews and the Iroquois will carry the C. S. L. flag after Aug. 1." The names of the vessels acquired are, J. H. G. Hagarty, E. B. Osler, W. D. Matthews and Iroquois, respectively.

Some figures relative to the recent record cargo of 490,720 bush. of grain brought down from the head of the lakes by the s.s. W. Grant Morden, show that with an average yield of 17 bush. to the acre it would take 28,886 acres to grow the amount, which if all turned into flour would produce approximately 109,050 barrels. In turn, if this flour was made into bread it would make approximately 21,809,000 loaves of 24 oz. each.

The company's new steam tug J. R. Binning arrived in Montreal harbor at the end of July. She was built at the company's yards at Sorel (Sorel Shipbuilding & Coal Co.), and was launched at the end of June. The hull is of oak and the superstructure of pine, and she has accommodation for a crew of eight. Her dimensions are, length 66 ft., breadth 16 ft., depth 10½ ft. She has speed of 11 miles an hour, and is named after the Manager of Furness Withy & Co. at Montreal, who is also a director of Canada Steamship Lines, Ltd.

The Playter Transportation Co., Ltd., has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital and office at Owen Sound, to carry on a general steamship and navigation business. The company's officers are:—Morley Lemon, Owen Sound, President; W. T. Moore, Meaford, Vice President; J. G. Telfer, Owen Sound, Secretary-Treasurer; and J. C. Butchard and G. Cleland, and latterly by the Georgian Bay Navigation Co., Owen Sound. She was built at Benton, Mich., in 1889, and was named Mabel Bradshaw. She is of steel, of the hurricane deck type, with dimensions, length 137 ft., breadth 25 ft., depth 16 ft., tonnage 500 gross, 296 register, and she is equipped with fore and aft compound engine with cylinders 16 and 28 ins. diam., by 26 ins. stroke, 250 i.h.p. at 105 r.p.m., and supplied with steam by a boiler of the firebox type, 8 x 12 ft., at 125 lbs.

Canada West Coast Navigation Co. Limited.

Some details of the incorporation of this company and its programme have already been published in Canadian Railway and Marine World. It was incorporated under the Dominion Companies Act with a capital of \$2,500,000 and office at Vancouver, B.C. Among those interested are, Jas. Carruthers, J. W. Norcross, Sir Trevor Dawson and M. J. Haney, all connected with Canada Steamship Lines, Ltd.; J. F. M. Stewart, of Lake Commerce Ltd., Toronto; R. M. Wolvin, Winnipeg, and H. W. Brown, formerly associated with the Pittsburg Steamship Co., Pittsburg, Pa. R. M. Wolvin has been elected President, J. F. M. Stewart, Vice President, and H. W. Brown has been appointed General Manager.

The incorporation of the company is an outcome of the British Columbia Government's recent act for aiding shipping and shipbuilding within the province, which, among other things, provides for the payment of a subsidy to the owner of any vessel, or vessels, to the number of 25, built in the province, and operated from any port therein, and returning to any port in the province for re-loading. The subsidy is payable in ten annual instalments, the first to be in respect of the first year after the declaration of peace in respect of the present war, and so computed as to bring the net earnings of the ship for the year in respect of which the subsidy is payable, up to 15% on the actual cost thereof, but the actual subsidy payable must never exceed an amount equal to \$5 a ton of deadweight cargo capacity in any one year. The subsidy is payable to the bona fide owner of the vessel, or to his assigns who actually operate the vessel, and the subsidy is not liable to attachment or any process of execution, and in the event of conflicting claims, the decision of a commission set up under the act, is binding, and without appeal.

This company has so far placed contracts for the building of eight vessels, six being built at the Wallace Shipyards, North Vancouver, and two by the Cameron-Genoa Mills Shipbuilders, Ltd., Victoria. They are wooden auxiliary motor ships, five masted, and known as the bald headed schooner type, that is, they do not carry any top sails. They will be equipped with two 160 h.p. Bolinders semi-Diesel engines, driving twin screws. The dimensions will be, length over all 255 ft., length of keel 225 ft., depth

moulded 21 ft. 4 ins., breadth extreme 44 ft. Their gross tonnage will be about 1,500 tons and their deadweight capacity about 2,500, with a lumber carrying capacity of about 1,500,000 ft. b.m. They will follow the latest and best practice of the builders of United States schooners designed primarily for the lumber trade, and will be of very heavy construction. The plans have been approved by Lloyd's Register of Shipping and they are to be given the highest rating, A.1 for 13 years. This, we are advised, is the first time that Lloyd's have classed any vessels of this type on the Pacific coast. The vessels will be provided with two large hatches and four cargo winches of the latest type, designed for rapid handling of cargo. Vessels of this type carry approximately 50% of their cargo on deck, and they are designed chiefly for the off shore lumber trade. The cost of these vessels complete will be about \$175,000. The keels of four of them were laid at North Vancouver recently, and two of them are now in frame. It is expected that the first will be launched about Dec. 1, and completed about six weeks after. Following this, it is expected that they will be turned out at the rate of one each month, the last to be ready for sea by July, 1917. Three of the vessels have been named respectively, Mabel Brown, Geraldine Wolvin and Jessie Norcross. The vessels were designed by J. H. Price, who designed and built the vessel City of Portland, a large auxiliary motor ship, at St. Helens, Ore., which attracted a great deal of attention in marine circles.

Stranding of the s.s. Haulwen

The enquiry into the cause of the stranding of the British s.s. Haulwen in Montreal harbor, June 14, was held at Montreal, Aug. 4, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and J. O. Grey, as nautical assessors. The court found that the vessels' officers were altogether blameless in the matter and that the pilot was solely at fault, as there appeared to be no interference on the master's part. The court expressed the opinion that the grounding of the vessel, which caused no damage, was due to an error of judgment, but not a culpable one. The pilot was therefore censured for not adopting a proper course in anchoring his vessel in such a narrow channel with the current then running, by dropping the starboard anchor instead of the port one when he found the vessel going in the opposite direction to the one in which he wanted her

Atlantic and Pacific Ocean Marine.

The Dollar Steamship Co. has leased the Great Northern dock at Vancouver, B.C., for handling its trans-Pacific traffic.

The Cairn Line s.s. Fremona ran ashore on Anticosti Island, Aug. 1, and was released Aug. 21 and taken to Montreal.

The name of the s.s. Strathhardle, acquired recently by the Dollar Steamship Lines, Ltd., Victoria, B.C., has been changed to Harold Dollar.

Furness Withy & Co. are reported to have ordered six cargo steamships, each with a dead weight carrying capacity of 8,000 tons, for early delivery.

The s.s. William P. Edwards, until recently operated on the Great Lakes, which has been fitted for ocean service, is loading lumber at Montreal, for Ireland.

The Allan Line steamships Ionian and Scotian, which were requisitioned by the Admiralty in the early part of the war, have been released, and have returned to the Canadian service under Canadian Pacific Ocean Services, Ltd.

The s.s. Minnesota, owned by the Great Northern Pacific Steamship Co., is reported to have been sold to the United States Steamship Co., of which C. W. Morse, at one time President, Eastern Steamship Co., is President.

The New Zealand Shipping Co. has established a service between Wellington, New Zealand, and London, Eng., via the Panama Canal. This company, which also operates to Montreal, formerly ran its vessels round Cape Horn.

The White Star-Dominion Lines' steamships Canada, Northland and Southland, which were requisitioned by the Admiralty in the early stages of the war, for transport service, have been released, and have resumed service on the Canadian route.

A press report from London states that Furness, Withy & Co. has secured a majority interest in the Prince Line, Ltd., of Newcastle-upon-Tyne. The company owns 40 vessels ranging from 2,000 to 6,000 tons each, trading in various parts of the world.

The s.s. Matatua, which was in trouble on Mar. 12 and 13, at St. John, N.B., when fire broke out among her cargo, ran ashore in St. Mary's Bay, Newfoundland, towards the end of July. She is owned by Shaw, Savill and Albion Co., London, Eng., and is under charter by H. R. Goodday & Co., for a cargo of deals from Quebec to England.

The s.s. Glenellah, formerly operated on the Great Lakes, and which is now running in trans-Atlantic service, under the management of Furness, Withy & Co., sailed from Quebec about the middle of August, for England, with a cargo of 2,500 tons of Canadian whiskey.

The repairs carried out on the British s.s. Arachne, which ran ashore on Miquelon Island recently, and which were carried out at Levis, are reported to have cost \$55,000. The chief damage was in holds 1 and 2, where 72 plates were renewed.

A Vancouver press report states that Canadian Pacific Ocean Services, Ltd., has chartered the British s.s. Moskwa for service between Vancouver and Vladivostok. Considerable traffic is taking place between these two ports, and it is stated that the C.P.O.S. has under charter the steamships Unkia Maru 5, Strinda and Arabien, for this service.

The Japanese s.s. Kenkon Maru 3, which was floated off the Belle Chain reef, Mayne Island, recently, after being wrecked there, Jan. 12, was saved by the Vancouver Dredging and Salvage Co., and towed to Esquimalt for examination. The contract for repairing the vessel has been awarded to a Seattle firm, who have sublet it to one of the yards at Portland, Ore. The cost of the repairs is stated to be \$170,000, the work to be completed in 65 days. Temporary repairs to the hull were made at Esquimalt, and the vessel sailed for Portland, Aug. 2.

Canadian Pacific Ocean Services Ltd. has recently added a motor lifeboat of novel design to the life saving equipment of one of its steamships. It is 30 ft. long by 9 ft. broad by 4 ft. deep, and has a double skin of diagonal planking. The space below the water line is filled with air tanks, and extra buoyancy is obtained by means of a cork fender, while a cast iron keel makes the boat self righting. The engine is of the three cylinder type of 22½ h.p. developed on petroleum, and 25 h.p. on petrol. It can be started on paraffin and changed to petrol, or started on petrol and changed in three minutes to paraffin. All controls are led to a position aft of the watertight engine housing, and it can be operated by one man. A speed of 8 knots an hour can be obtained and there is a margin of power for towing other life boats.

12, was floated off on the following day, and sailed into Sydney under her own steam. She had a cargo of 10,000 tons of iron ore, a portion of which was jettisoned before she could be refloated.

A three masted schooner of 350 tons was launched at Lunenburg, N.S., at the end of July, for the Hillcrest Shipping Co. She is said to be the largest vessel of this type to be built in the neighborhood, and is to be engaged in the foreign shipping trade, under the management of Zwicker & Co.

The steamboat Mary Jane, which is being offered for sale, is owned by I. H. Mathers & Son, Halifax, N.S. She was built at Noank, Conn., in 1890, and is screw driven by engine of 10 n.h.p. Her dimensions are, length 49.8 ft., breadth 14.6 ft., depth 6.4 ft.; tonnage, 29 gross, 20 register.

The Department of Naval Service received tenders recently for the purchase of the three masted schooner Burleigh. She was built at Shelburne, N.S., in 1904, and is equipped with a 40 h.p. auxiliary gasoline engine. Her dimensions are, length 101 ft., breadth 25½ ft., depth 10 ft. 8 ins.; tonnage, 149 gross, 130 register.

The s.s. Lintrose, formerly owned by the Reid Newfoundland Co., and operated on the Sydney and Port aux Basques route, and which was sold to the Russian Government about a year ago, is reported to have been lost last winter in the White Sea. It is said that she ran on a rock, and when pulled off, sank in 18 fathoms of water.

The lightship on Lurcher Shoal, off Yarmouth, N.S., was removed during August for repairs. Pending their completion the station has been marked with a combined gas and whistling buoy, painted red, with an occulting white light, and a submarine bell buoy painted red. It is expected that the lightship will be replaced during September.

The s.s. Samuel Blandford, en route from New York to St. John's, Nfld., with coal, struck on the Main Keys at Cape St. Marys, Nfld., in a dense fog, early in August and became a total wreck. She was built at Quebec in 1872, as a private yacht for the Allan Line, and was later engaged in the mail service between

Halifax and St. John's, and again in the local seal fishery. About two years ago she was used in the coal trade, and was later acquired by Job Bros. & Co., and repaired and refitted for seal fishing.

The Montreal Transportation Co.'s s.s. Stormount, which stranded on Gull Ledge, near Marie Joseph, June 20, when en route from Philadelphia to Sydney, N.S., under charter to the Dominion Coal Co., has been abandoned, all efforts to release her having failed. She was built at Dumbarton, Scotland, in 1907, and was screw driven by engine of 202 n.h.p. Her dimensions were, length 249.1 ft., breadth 42.6 ft., depth 20.6 ft.; tonnage, 1,955 gross, 1,231 register. The Wreck Commissioner's judgment in the investigation relative to her loss was given in our last issue.

The Halifax Graving Dock Co.'s report for 1915 show a gross profit of £23,877 18s 6d, and there is an available balance of £21,669 5s 2d after providing for London office expenses, accrued income tax, etc. The balance has been disposed of as follows,—Depreciation £797 3s 7d, deferred maintenance £2,000, machinery renewal fund £1,000, provision for current income tax £2,049 7s. 2d. 7% debenture interest £9,141 13s 8d, mortgage debenture stock redemption fund £6,681 0s 9d. The report states that owing to the dock having been continuously occupied during the year, it was not possible to carry out certain repair work. They have therefore reserved out of the profits £2,000 for deferred maintenance. The negotiations with the Dominion Government concerning extensions to the property have been suspended owing to the war.

The Norwegian s.s. Borghild, which arrived at Halifax, N.S., Aug. 14, with the crew of the fishing schooner Oriole, which she sunk in collision, has been libelled by the owners of the schooner, and separately by the crew and the captain, on claims of \$26,000, \$10,000, and \$770 respectively, for loss and damages. Relatives of three members of the crew, whose lives were lost, also claim \$22,000.

The s.s. City of Ghent, registered as owned by W. A. Beattie, Pictou, N.S., is reported to have been sold to British parties for £700 more than she originally cost. She was built at Great Grimsby, Eng., in 1871, and is screw driven by en-

Maritime Provinces and Newfoundland.

An order in council has been passed approving amendments to the bylaws of the pilotage district of Miramichi, N.B., relating to pilotage dues.

The Maritime & Newfoundland Steamship Co. has libelled the s.s. Arachne, which stranded recently at Birds Rocks, Little Miquelon, for \$75,000 for salvage services.

The Reid Newfoundland Co., which is now operating the s.s. Sibyl on the Cabot Strait route, has had her equipped with wireless telegraphy, so that she will be able to carry passengers as well as mails and freight.

The Cupica Co., organized recently in St. John's, Nfld., has purchased the Norwegian auxiliary vessel Cupica, which is 226 ft. long, 36 ft. wide and 23 ft. deep, with a deadweight carrying capacity of 1,900 tons. She is equipped with twin cylinder auxiliary engine.

The Norwegian s.s. Sandefjord, which ran ashore at Sydney Mines, N.S., Aug.

gine of 40 n.h.p., and her dimensions are, length 135.9 ft., breadth 20.4 ft., depth 9.7 ft., tonnage, 199 gross, 119 register. She has been lying idle at Halifax for about three years.

Province of Quebec Marine.

Work at the Davie dry dock and shipbuilding plant at Lauzon, was suspended, Aug. 16, owing to a strike of workmen, who demanded an increase of 5c an hour. The present rate of pay is 30c an hour.

The St. Charles Navigation Co., Ltd., has been incorporated under the Quebec Companies Act, with \$10,000 authorized capital and office at Quebec, Que., to own and operate steam and other vessels and to carry on a general navigation business.

The Quebec Shipbuilding & Repair Co., Ltd., has been incorporated under the Dominion Companies Act, with \$40,000 authorized capital, and office at Montreal, to carry on the business of shipbuilders, and in connection therewith to build, own and operate steam and other vessels, etc.

The Upper Ottawa Improvement Co.'s paddle wheel steamboat G. B. Greene was burned at her dock at Quyon, Que., July 27, four of the crew losing their lives. She was built at Quyon in 1896, and was equipped with engine of 125 n.h.p. Her dimensions were, length 142 ft., breadth 44.8 ft., depth 8 ft.; tonnage, 225 gross, 218 register.

The Dominion Government s.s. Montmagny, which was sunk in the St. Lawrence River, near the Isle of Orleans, about a year ago, has been sold by public tender, as she lies under water, to the St. Charles Navigation Co., incorporated recently at Quebec, for \$25,000. The Levis Wrecking Co. had a contract to raise the vessel some time ago, but the attempt was unsuccessful. When built, the Montmagny was valued at \$100,000.

Ontario and the Great Lakes.

The Dominion Public Works Department will receive tenders to Sept. 8, for repairs to the east pier at Port Burwell.

The Farrar Transportation Co., Ltd., Toronto, paid on Aug. 1 a special dividend of 20% from its operations to July 1.

The A. B. Mackay Steamship Co., Ltd., has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital, and office at Hamilton, to take over two steamships acquired recently by A. B. Mackay, Hamilton.

A. B. Mackay, formerly of R. O. & A. B. Mackay, steamship owners, Hamilton, has purchased the s.s. Natironco, formerly Pioneer, built at Detroit, Mich., in 1892. She is equipped with engine of 146 n.h.p., driving a screw. Her dimensions are, length 225 ft., breadth 35 ft., depth 13.7 ft.; tonnage, 1,079 gross, 542 register. She was owned by the National Steamship Co., associated with the National Iron Works, Ltd., Toronto, but has been operated under Canada Steamship Lines management for some time.

The Lake Simcoe Navigation Co.'s s.s. Otonabee was burned and became a total loss, at Barrie, Aug. 15, when a considerable amount of damage was also done to the wharf and nearby buildings. The company owns and operates the steamboats Monarch and Otonabee, between Barrie and Peninsular Park, on Lake Simcoe. The Otonabee was built at Peterborough in 1907, and was screw driven by engine of 21 n.h.p. Her dimensions were, length

111.2 ft., breadth 24 ft., depth 5.6 ft., tonnage, 136 gross, 87 register. She was formerly owned by the Peterborough Navigation Co., Peterborough.

The U. S. Federal Court at Chicago, Ill., on Aug. 18, issued a temporary restraining order to prevent the sale of the nine vessels comprising the Great Lakes and St. Lawrence Transportation Co.'s fleet to the French Government. The complaint, on behalf of the Scranton Coal Co., stated that it was announced that five of the vessels were at Montreal waiting clearance papers for Havre, property of the French Government, and if this were permitted, the complainant would be without means to ship its coal. The company owns nine steel vessels, named A. D. Davidson, Albert M. Marshall, George G. Howe, H. G. Dalton, John Crerar, John Lambert, J. S. Keefe, Robert Wallace, and S. N. Parent.

It is announced that salvage work on the s.s. Charles S. Price, one of the steamships which was lost in Lake Huron in the great storm of Nov., 1913, has been definitely abandoned. It is stated that the man in charge of the preliminary operations has said that after having thoroughly explored the hull he was convinced that it would be impossible to float it without spending a very large amount, and there would be nothing but scrap to show for it. The interior of the vessel looks as though the boiler had exploded, the aft bulkhead is pushed forward and the machinery is wrecked and pushed towards the stern. The aft section is so badly damaged that it would be impossible to make any repairs under water. The aft and forward cabin sections are flat, and part of the machinery is resting on the lake bottom.

The Northern Navigation Co.'s s.s. Saronic was completely burned at Cockburn Island, Lake Huron, Aug. 21, when bound to Port McNicoll with a cargo of wheat. The crew escaped from the vessel in two boats. The Saronic was built at Sarnia, Ont., in 1882, and was formerly known as United Empire. The hull was of oak, and she was of the awning deck type, with two watertight and two non-watertight bulkheads, wooden arches, bow sheathed for ice, windlass between decks with no efficient bulkhead abaft same, and fitted with electric light. She was equipped with fore and aft compound engine with cylinders 34 and 60 ins. diam. by 42 ins. stroke, 1,200 i.h.p. at 75 r.p.m., and supplied with steam by two Scotch boilers 12 by 12 ft., at 100 lbs. Her dimensions were, length, 245 ft., breadth 36 ft., depth 23 ft., tonnage, 1,960 gross, 1,296 register.

The Plunkett Navigation Co., the incorporation of which was announced in recent issues, is operating the s.s. James W. Follette, formerly owned by W. H. Follette, Tonawanda, N.Y. She is in charge of Capt. Harry Redfern, with John McFaul as chief engineer. The officers of the company are: President, A. J. Plunkett; Vice President, G. J. Plunkett; Secretary-Treasurer and General Manager, G. J. Madden, Cobourg, Ont. The s.s. James W. Follette was built at Gibraltar, Mich., in 1881, and is of wood, with well deck, diagonal strapping on frames, wooden arches, iron lined boiler house, and was originally named Jesse H. Farwell. Her dimensions are, length 212 ft., breadth 35 ft., depth 12 ft.; tonnage, 756 gross, 538 register. She is equipped with fore and aft compound engine with cylinders 27 and 44 ins. diam. by 40 ins. stroke, 600 i.h.p., at 72 r.p.m., and supplied with steam by boiler of the firebox type 10 by 16 ft., at 125 lbs.

British Columbia and Pacific Coast.

The C.P.R. s.s. Princess Sophia has been overhauled and some general hull and engine room repairs made.

The C.P.R. s.s. Princess Victoria was docked at Esquimalt recently and thoroughly cleaned and painted and had a number of miscellaneous repairs carried out on her hull and engines.

The Pacific Coast Steamship Co.'s steamships Governor and President, which were withdrawn from service recently owing to the longshoremen's strike, resumed their calls at Victoria during August.

The contract for the construction of a concrete lighthouse tower, fog alarm building and dwelling house, at Triple Island, Brown Passage, is reported to have been awarded by the Marine Department to Snyder Bros. and Brethour, Vancouver.

The C.P.R. s.s. Princess Maquinna, which was docked at Esquimalt recently for survey and temporary bottom repairs, due to touching ground at the mouth of the Skeena river, has had a complete overhauling and two propeller blades replaced, and has returned to service.

The s.s. Turret Crown, owned by the Coastwise Steamship & Barge Co., Vancouver, and in operation between Tacoma, Wash., Vancouver and Anyox, was formerly owned by Mackenzie, Mann & Co. interests at Toronto, and was operated for some years in the lake trade, and latterly in the St. Lawrence and coast coal trade. She was delivered to her present owners at Quebec in Nov., 1915, and was then overhauled and equipped as an oil burner at Perth Amboy, N.J. Before going to the Pacific coast she was under charter in the sugar trade between New York and the West Indies. She was built at Sunderland, Eng., in 1895, and is screw driven by engine of 250 n.h.p. Her dimensions are, length 253 ft., breadth 44 ft., depth 19.4 ft.; tonnage, 1,827 gross, 1,142 register.

It is reported that such progress has been made on the outer harbor works at Victoria, that it is probable the work will be completed by the end of the year. Divers are working on the submarine foundations of the last length of 85 ft. of the breakwater. The construction of the pier to the westward of the breakwater, at Ogden Point, is also being hurried along. Of the total of 53 crib sections required for this structure, 42 have been laid, and the remainder, it is expected, will be laid by the end of October. Within the next few weeks the construction of the superstructure on piers 2 and 3 will be commenced, and the piers will probably be completed early in the new year. The contractors for the breakwater are Sir John Jackson (Canada) Ltd., and for the piers, Grant Smith & MacDonnell Ltd.

Vessels Turning in the Rivers at Fort William.—This matter, reference to which was made in our August issue, has been followed up by the Dominion Marine Association, with the view of showing that the order compelling vessels to go into one of the turning basins at Fort William, when making a turn, works an unnecessary hardship on canal sized vessels, without corresponding advantage. The question is being considered by officers of the departments concerned, but for the present they have recommended that the regulation stand unchanged, so that all steamships over 200 tons must go to the turning basins.

Harbor Improvement Scheme at Vancouver.

The Vancouver Harbor Commissioners have outlined a scheme of improvement for Vancouver harbor, extending over five years, at an estimated expenditure of \$5,000,000. Among the properties which it is stated it would be necessary to acquire to carry out the scheme, are, the Kitsilano Indian reserve, 80 acres, \$700,000; property at Port Moody, 88 acres, \$550,000; the Heaps property on Burrard Inlet, 16½ acres, \$650,000; right of way for a harbor terminal railway from the Kitsilano Indian reserve to the Heaps property, \$1,552,861; a portion of the Pacific Great Eastern Ry. right of way, \$516,627; and wharf property and warehouses owned by the Great Northern Ry., and the waterfront property immediately east of the G.N.R. property, \$1,800,000. The approximate total cost of the property thus to be acquired is \$5,769,128. It is expected that the Harbor Commissioners will be able to effect exchanges for other lands which they hold, thus reducing the cost to approximately \$2,448,834. By the issue of \$5,000,000 bonds, it is es-

The Harbor Commission was incorporated May 16, 1913, with jurisdiction over the harbor, which includes Burrard Inlet, with the North Arm and Port Moody, False Creek and English Bay, and all other tidal waters east of a line drawn from the Point Atkinson lighthouse southerly to the most westerly point of Point Grey. The commission consists of C. Carter-Cotton, Chairman, formerly editor of the News-Advertiser, salary, \$2,000; J. A. Fullerton, formerly in C.P.R. service in connection with its trans-Pacific steamships; and S. McClay, interested in the stone business, salary, each, \$1,500. Early in 1914, the commission's bylaws were approved by the Governor General in council. They authorized the commission to make certain charges against vessels using the port. Prior to this, Vancouver had been practically a free port, apart from certain charges claimed that they had no prior knowledge of the charges to be imposed, nor

Map of Proposed Terminal Railway for Vancouver Harbor.

timated that approximately \$1,500,000 will be available for the development of the harbor properties and the provision of facilities. The proposal and plans were submitted to the Marine Department and the scheme has been recommended for approval, and the commissioners are confident that it will be self supporting from the start. Some opposition to the scheme has developed, it being urged that the commissioners have not given the public necessary information, nor the time to think over the proposal. On behalf of the opposition, which consists chiefly of the Board of Trade, the Manufacturers Association and the shipping interests in general, it is urged that it will impose a heavy burden on the port and that it will not pay, and that the prices mentioned for the properties proposed to be acquired are far too high. The commissioners argue that each unit of the scheme will be revenue producing, that the project will not come on the port, that the prices quoted for properties are maximum estimates, and that actual prices paid will be lower. The accompanying plan shows the route of the proposed harbor terminal railway along the front connecting the Kitsilano reserve with the Heaps property.

any opportunity to express their views thereon. The charges for the port of Vancouver are as follows:—

Pilotage in and out \$1 per ft. and 1c. a ton; sick mariners' dues at 1½c. a net registered ton, five times a year; harbor dues 3c. a net registered ton, five times a year.

These rates worked out for a specific vessel, show charges of \$239 for Vancouver, and the following for two other Canadian ports and three U.S. ports,—Quebec, \$354.94; Montreal, \$479.94; San Francisco, \$625.20; Portland, Ore., \$483.20, and Seattle \$455.95.

Some figures as to the tonnage handled at Vancouver show that for the year ended Mar. 31, the total tonnage paying wharfage was somewhat under 300,000 tons, compared with about 500,000 tons for the year ended Mar. 31, 1913, and that on the 1916 figures the commissioners are not justified in proceeding with such a large scheme. The commissioners are firm in the idea that they should plan for the future, and that in a short time sufficient shipping will come through the port to justify new piers and warehouses, and also that the provision of cheap industrial sites will attract manufacturers, all of which will be in the interests of the port.

Stranding of the s.s. Tyne.

An investigation into the causes of the stranding of the British s.s. Tyne on Twelve Foot Patch, Old Proprietor Island, Grand Manan, N.B., July 23, was held at St. John, N.B., recently, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Mulcahy and Jas. Hayes, as nautical assessors. The court found that the master, H. W. Robson, did not adopt all the prudence required in navigating his vessel, taking into consideration the fact that he was a stranger to those waters and that he sailed from a port outward bound with a state of atmosphere which prevented him from seeing a very great distance and, owing to the direction of the wind, he should have anticipated that it would become denser. He committed two grave errors of judgment, first, left port without streaming his log, no matter what its condition, and second, in assuming that he was a mile or mile and a half off Ile Haute when he passed it. Some time before the stranding, a cast of the lead showed 100 fathoms, a few hours later 27 fathoms were found, and the vessel proceeded at half speed until another cast of the lead showed 8 fathoms, when she was stopped although the engines were not reversed. The master erred greatly in not going full speed astern the moment he found 27 fathoms, which indicated that the water was shallowing rapidly. It was felt that the master's certificate should be dealt with, but after taking into consideration the honesty displayed in giving his evidence, as it was quite apparent that he did not endeavor to hide any particulars or any of his shortcomings, and the able manner in which he succeeded in getting his vessel off the rocks, from which few vessels have hitherto escaped after striking, and also considering the shortage of masters and officers under present conditions, the court thought the justice of the case would be met by reprimanding and severely censuring the master for failing to adopt the precautionary measures mentioned, and did not attach any blame to the officers.

Stranding of the s.s. Middleham Castle.

The stranding of the British s.s. Middleham Castle on Matane reef, Que., July 27, was enquired into at Montreal, Aug. 3, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and J. O. Grey, as nautical assessors. After hearing the evidence the court expressed itself as handicapped, owing to existing conditions, in dealing with the certificate of the master, J. A. Kelly, with the severity the case demanded, and concluded the judgment as follows:— "Here we have a master ordered to come to Canadian waters, which are absolutely unknown to him. He stopped at Sydney, where he endeavored to secure some charts, but obtained for navigating his ship up the River St. Lawrence a chart of American publication. Without any sailing directions, not conversant with the tides and currents prevailing in this river, he ventured to sail his vessel within ¼ mile of head lands, which are really low points of land the same as other points along his course, which the court considers a foolhardy operation, and otherwise termed too close sailing. This ship is ready to sail, in fact, the sailing date has been delayed for this investigation to be held. If the court carried out its impression it would suspend the mas-

ter's certificate for two months for this reckless navigation; but by doing so it would expose the vessel to some delay in obtaining another master, and it would appear that the masters available today may not think fit to take command of this vessel, which is bound to a place in Europe with a cargo consigned to the Admiralty, containing provisions or ammunition for the Allies. This peculiar position prevents the court from acting as it would otherwise do, and therefore it will meet the situation as it is by severely censuring the master for venturesome navigation in unknown waters, without having first surrounded himself with the necessary information. The Third Officer, who was on the bridge at the time, is exonerated from all blame, as he took the courses from the master. The court has noted that the log books have been well kept, and noticed as well that the compass was increasing its error on the courses being steered, for some time past, which should have awakened the master to the necessity of giving the coast line on these courses a wider margin. With this reprimand goes the caution to the master to be more prudent and not hazard property entrusted to his care in the manner in which he did in this instance."

Telegraph, Telephone and Cable Matters.

The Great North Western Telegraph Co. has been ordered by the Board of Railway Commissioners to restore telegraph tolls charged prior to July 1, from Pas, Man., and to file amendment to its tariff accordingly.

The Marconi Wireless Telegraph Co. has established a school of wireless telegraphy at Montreal, equipped with a complete dummy system arranged for a radius of 400 miles. It is in charge of D. P. R. Coats, who has had considerable experience as a Marconi operator.

The Western Union Telegraph Co.'s new cable repair vessel, Lord Kelvin, was at Halifax, N.S., recently, on her first trip to that port. She is of the most modern type for her class of work, burns oil fuel, and is equipped with the most up to date machinery for locating, raising and testing cables.

The arbitration board appointed to deal with the Great North Western Telegraph Co.'s operators' application for increases of wages of about 15%, is as follows:—Judge C. T. Snider, chairman; F. H. McGuigan, Toronto, formerly Vice President, G.T.R., representing the company, and D. Campbell, Winnipeg, on behalf of the operators.

A. C. Fraser, Superintendent of Telegraphs, Eastern Lines, C.P.R., who was in Halifax, N.S., recently, is reported to have stated that the C.P.R. had completed a new copper line to the Marconi station at Louisburg, thus giving the company a new line for Marconi business. from Louisburg to Montreal, the one used previously for this traffic being released for other business.

It is reported that the Dominion Government has engaged P. E. Edelman, St. Paul, Minn., to prepare plans for wireless telephone and telegraph systems to secure communication with the Dominion parks in the west. The installations will, it is said, be the first of their kind, and a new application of radio communication, the equipment being of a special design adapted for the difficult mountain service.

The Great North Western Telegraph Co. has opened offices at Little Metis Beach, Manoir Richelieu, Pointe au Pic,

and Perthuis, Que.; Barriefield Camp, Bobcaygeon, Chaffey's Locks, Dwight, Grimsby Beach, Kemptville, Lake Joseph, Milford Bay, Muskoka Lakes, Petewawa Camp, Rosseau, Royal Muskoka Hotel and Sparrow Lake, Ont., and Sangudo, Alta. The offices at St. Andre de Kamouraska, Que., Colebrook, Ont., and Brule Lake and Cardiff, Alta., have been closed.

A. G. Saylor, General Manager, Eastern Division, Western Union Telegraph Co., New York, New York, who retires Sept. 1, on pension, was born at Bloomfield, Ont., June 11, 1859, and entered Dominion Telegraph Co.'s service at 10 years of age, as a messenger at Ingersoll, Ont. Two years later he was appointed operator at Walkerton, Ont., and after a year of service with the Montreal Telegraph Co. at the Parliament Buildings and at the Montreal main office, he was appointed night operator, G.T.R., at Portland, Me. He subsequently entered the Atlantic & Pacific Telegraph Co.'s service, and later joined the Western Union Telegraph Co., and remained there until his retirement. He was appointed General Superintendent, Eastern Division, Mar. 1, 1910, and the title was shortly after changed to General Manager.

Marconi Wireless Telegraph Co's Annual Meeting.

The report for the year 1915, presented at the recent annual meeting in London, Eng., showed that there was no change in the capital stock since the previous year. Bills payable and sundry creditors showed a reduction of about £8,000 and £16,000 respectively, and the general reserve account stood at £967,530 0s 6d, an increase of about £100,000. Other increases were, cash at bankers, £20,000; investments and temporary loans, £173,500; sundry debtors, debit balances and expenditures on foreign developments, £23,000; shares in associated companies and patents £23,000. The shares appear in the balance sheet at cost, but have a par value of £2,484,369 14s 10d. The profit and loss account shows the balance of contracts, sales and trading account, to be some £210,000 more than in the preceding year, and the net profit £377,817 12s 1d, an increase of some £145,000. The amount written off for depreciation of exchanges and investments was £53,000. Business during the year can scarcely be considered as normal. A considerable amount of work should have been undertaken in various parts of the world, but for the war, but against this

there were many additional orders from British and allied countries. On account of the war, the associated companies have not been able to make the progress which they otherwise would have done. The trans-Atlantic service with the United States, which was ready for working when war commenced, has had to continue idle, the British stations remaining under Government control. The programme in connection with the Canadian company has had to remain in abeyance. During the war, the British Government has made considerable use of the company's patents, compensation for which will be matter for negotiation, as also will be compensation for the use of stations and the system generally.

During the year, G. Marconi, G.C.V.O., has been engaged in research work in Italy, where he carried out some important improvements and tests. The results obtained were far reaching and directly concerned with the future practice of wireless telegraphy and wireless telephony over long and short distances, no matter whether conducted by means of ordinary sparks, quenched sparks or continuous waves, and it is believed that results hitherto impossible will be obtained. It was officially announced that in the near future he will introduce a new, independent and very simple installation, to be worked from the bridge of a ship, which will put an end to all danger of collision at sea in darkness or fog.

A dividend of 5% less income tax was declared payable on ordinary shares, Aug. 1, to shareholders of record on June 29.

Transportation Conventions in 1916.

Western Canada Railway Club—Louis Kon, Box 1707 Winnipeg. Meetings at Winnipeg 2nd Monday each month, except June, July and August.

Winnipeg Traffic Club—James Gehrey, Bannatyne Avenue, Winnipeg, Man.

Wartenfels-Lucille M. Schnare Collision.—At the recent investigation at Quebec, Que., into the collision between the British s.s. Wartenfels and the schooner Lucille M. Schnare, near Cape Pine, Nfld., June 18, Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander E. G. V. Elliott, R.N.R., and Lieutenant J. A. Murray, R.N.R., found, after a careful analysis of the evidence, that there was no cause for condemning either side, and that the collision was, under the circumstances, unavoidable, and no blame could be attached to anyone for its happening.

CANADIAN PACIFIC RAILWAY CO.

Notice to Shareholders.

The Thirty-fifth Annual General Meeting of the Shareholders of this Company, for the election of Directors to take the places of the retiring Directors and for the transaction of business generally, will be held on Wednesday, the fourth day of October next, at the principal office of the Company, at Montreal, at Twelve o'clock noon.

The Common Stock Transfer Books will be closed in Montreal, New York and London at 3 p.m. on Friday, the first day of September. The Preference Stock Books will be closed in London at the same time.

All books will be re-opened on Thursday, the fifth day of October.

By order of the Board,

W. R. BAKER,

Secretary.

RANDS GRAVITY SAND PLANT

Design copyrighted Feb., 1915.

Occupies area 9 ft. x 12 ft. and may thus be installed between receiving track and coaling track of the Coaling Plant. Green sand is dumped in receiving hopper in the same manner as coal and hoisted in elevating bucket and discharged direct by gravity into a 50-ton wet sand bin. Green sand then flows direct to "Beamer" Patent Steam Sand Dryer, which will hold damp sand but will not hold dry sand. By our system sand is dumped, elevated, stored, dried, dry sand elevated and placed on locomotives without being touched by hand or shovel. Eliminating labor greatly reduces cost of handling per ton. Investigate the "Beamer" Sand Dryer.

BROWNHOIST

A Saving of \$2400 a Year

THE men on one of the large railroads wanted a locomotive crane at their terminal. They wanted this crane to coal their locomotives, load the cinders and handle the stationary coal. This work was being done by hand, and the engines were being coaled from a mechanical chute. This road uses Brownhoist Locomotive Cranes at several points and the operating men knew just what it would cost to do their work with a Brownhoist Crane. And they also knew what it was costing to do the work in the old way. The following are the railroad's figures:

Yearly cost for doing the work in the old way	- - -	\$6885.65
Yearly cost for doing the work with Brownhoist Crane		\$4430.00
Saving	- -	\$2455.65

What a Brownhoist Locomotive Crane will do and where it is being used are shown in our Catalog I. This catalog will be sent to any one upon request.

RESULTS COUNT

That's Why 480 Railroad Shops Are Using Thermit

Thermit offers the only sure and reliable repair for locomotive frames and other heavy sections.

The superheated liquid Thermit steel is produced in bulk and poured all at once into a mold surrounding a broken section, resulting in the perfect amalgamation of the Thermit steel with the parts with which it comes in contact. The fact that those parts are first preheated, makes the weld doubly sure.

The operation of welding locomotive frames is easily accomplished, without removing the frame from position, and with very little dismantling, no matter if the frame be broken in the splice, jaw, next to the cylinder saddle, or at any other point. The engine is returned to service in from ten to twelve hours.

Hundreds of thousands of pounds of Thermit are being used annually by railroad companies in the United States and Canada.

There is only one reason for this, and that is that Thermit produces results and we all know that "results count."

Our pamphlet No. 2144 will be of interest.

All Thermit and Thermit appliances are made in our Canadian shops.

GOLDSCHMIDT THERMIT COMPANY

Brake Shoe Scrap Reduced To The Absolute Minimum

The Reinforced Brake Shoes here pictured were all worn down practically to the steel back.
 The average weight of 100 shoes taken at random from this pile was about 5½ lbs.
 The roads using these shoes received about twice as much brake shoe service as could have been gotten from ordinary unreinforced shoes. It paid them and it will pay your road to use Reinforced Brake Shoes.

**CANADIAN PACIFIC RAILWAY CO.
Dividend Notice.**

At a meeting of the Board of Directors held today the following dividends were declared:

On the Preference Stock, two per cent. for the half year ended 30th June last;

On the Common Stock, two and one-half per cent. for the quarter ended 30th June last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from Special Income Account.

Both dividends will be paid on 30th September next to Shareholders of record at the closing of the books in Montreal, New York and London at 3 p.m. on Friday, 1st September next.

All books will be reopened on Thursday, 5th October next.

By order of the Board,

W. R. BAKER,

Secretary.

Montreal, 14th August, 1916.

Minarets and Mountain Peaks

at luxurious Banff—in the very heart of the

Canadian Pacific Rockies

At Banff are all the fine touches of social life, good table, good service, every possible comfort at moderate cost. From the stone pillared verandah or from the wide windows of the hotel, lies spread the great panorama of Alps and river.

Reached only by the world's greatest transportation system—the

Canadian Pacific Railway

which maintains hotels at Banff, Lake Louise, Field, Glacier, Balfour.

Everything Canadian Pacific Standard—None Better.

FAIRMONT WINS GOLD MEDAL

The excellence of FAIRMONT Railway Motor Cars is attested by their receiving the highest competitive award, a gold medal, at the Panama-Pacific International Exposition, San Francisco.

Years of good service on Canadian railroads has proven the justice of this award. When you need a motor car, specify "FAIRMONT". Installation terms to private buyers.

FAIRMONT GAS ENGINE & RAILWAY MOTOR CAR COMPANY

Formerly Fairmont Machine Co.

445 N. MAIN ST., FAIRMONT, MINNESOTA, U.S.A.

A PROPHECY

"Experience indicates that the delivery of a proper lubricant to the flange will reduce the wear of both flange and rail."

That was the prophesy of the Flange Committee of the M.C.B. in 1911.

FULFILLED

Experience secured by a large number of railway officials through the installation of the

Detroit Automatic Flange Lubricator (Pendulum Type)

has fulfilled this prophesy made over five years ago, and demonstrated that the Detroit Automatic Flange oiler gives efficient flange lubrication just when needed. These men know what this has meant to their roads, in greater tire mileage and reduced danger of derailment.

Booklet FO-75 will show what it will mean to you. Send for it today.

There's Power & Capacity in NATIONAL TRUCKS

Railroad and Express Companies

Motor Trucks that will stand up day after day under the service demanded by Freight and Express delivery and give this continuous service with the greatest economy and mileage are worth investigating.

National Motor Trucks are Sturdy, Dependable and Economical. Every National is on the road every day. Stop the first one you see and ask the driver. He will tell you of National POWER, STRENGTH and MILEAGE—and of the unique National Service Plan.

National Trucks will be exhibited at the Canadian National Exhibition. See the 3½ ton Truck built for Gunns Limited.

Train Control By Regeneration of Power On Down Grades

Advantages:

1. **Security in Operation**, due to the fixed speed of train, and the full capacity of air in the brake system in reserve.
2. **Saving in Equipment Maintenance**, due to decreased wear on wheels and brake shoes, as well as reduced shock to draft rigging, cars and lading, secured by uniform-speed operation.
3. **Saving in Power** due to the energy of the train, represented by the difference in elevation, being absorbed by the motors on the locomotive, and there converted to power available for use by other trains.

The Baldwin - Westinghouse Electric Locomotives on the Elkhorn Grade Electrification of the Norfolk & Western Ry. secure these features without additional apparatus, complication or manipulation.

ANNOUNCING a new addition to the C.M.C. Line of High-Grade Machine Tools

THIS 14-inch quick-change Engine Lathe has recently been designed to meet the demand for a Quick-Change Engine Lathe with all modern improvements of practical value, and at the same time provide a lathe that will be well adapted for use in small shops, owing to its great range of usefulness.

Advantage has been taken of many years' experience in using, building and designing engine lathes, and at the same time some of the best of recent ideas of proved worth found in American and British Engine Lathes have been incorporated in this design.

This lathe marks an advance on the engine lathe sold to-day in its **UNIQUE COMBINATION OF HANDINESS, CONVENIENCE AND ADAPTABILITY.**

FOR instance, the thread-cutting range on this lathe is, without changing a single gear, from 32 threads per inch to 5" lead, or by changing two gears on plate, from 64 threads per in. to 5" lead, or one thread in 5". By making extra change gears for the quadrant plate, practically any thread can be cut between the limits of 100 threads per in. and 5" lead. The relieving attachment supplied with this lathe, when equipped for the tool room, is universal, being applicable to external, parallel, taper, angular or spiral reliefs, or to internal reliefs or end reliefs.

Manufacturers of Steel for Shrapnel Shells and Admiralty Forgings

Only Company in Canada producing Steel Ingots by the "Harmet" liquid process

Can supply Forgings up to 40 Tons in weight to all Admiralty and Lloyd's Tests and Specifications

FORGING A RUDDER FRAME

Why "Harmet" Liquid Process Steel Ingots are Superior to Ordinary Steel Ingots:—

1. Prevention of cracks due to shrinkage; of internal stresses and resulting cracks and fissures.
2. Early cessation in the crystallization of the metal, and the production of fine crystallization without cleavage planes.
3. Lessening of segregation, i.e., reduction of tendency of carbon and other impurities to concentrate in the central and upper parts of the ingot.
4. Prevention of "pipes" or interior cavities, and thus preservation of absolute solidity in the ingot.
5. Improvement in physical properties.
6. Reduction in waste of ingot.

OUR modern Steam Hydraulic Forge Shop at New Glasgow, N.S., part of which is shown above, and our large Steel Plant at Sydney Mines, N.S., equal the very best in America.

On the shortest notice, we can supply forgings of all shapes and sizes, made of ordinary or "Harmet" fluid compressed open-hearth steel, and satisfying the most severe specifications.

Our forges are modern in every respect—designed and installed after close study of the latest developments in all countries. Moreover, we produce the highest grades of steel by the most approved methods. It has always been the policy of "Scotia" to hold a position in the front rank of trade, and by the recent additions to plant, this policy has been maintained in a practical manner, bringing "Scotia's" equipment abreast of the best foreign forges.

It Actually Earns \$161.00 A Day For This Railroad

THIS is not an absurdity, but a fact; and here is how.

In breaking scrap in the yards of a well managed eastern railroad, a Brownhoist equipped with a magnet is used, dropping an 8,000 lb. weight on the castings.

Previous to installing the Brownhoist large castings were not broken, as there was no economical way of doing it. Consequently large scrap castings were worth only \$7.50 per ton.

By the aid of a Brownhoist, equipped as above described, all large scrap castings are broken, thereby having a value of \$14.00 per ton in their broken state.

On this work, 26 tons of castings are broken in a ten hour day, at a cost as follows:

Engineer, 10 hrs. @ 34c per hr.....	\$ 3.40
Coal, ½-ton @ \$1.25.....	.63
Valve Oil, 1 pt. @ \$.477 per gal63
Engine Oil, 1 qt. @ \$.277 per gal07
Miscellaneous Supplies10
Repairs, including general repairs.....	.91
Total for Hoist.....	\$ 5.17
One Helper @ 20c per hr.....	2.00
Total Cost for Brownhoist per 10 hr.	\$ 7.17
Value of 26 tons broken castings @ \$14	
per ton	\$364.00
Value of 26 tons unbroken castings @ \$7.50	
per ton	195.00
Gross profit by use of Brownhoist.....	\$169.00
Less Cost of Breaking.....	7.17
Net profit gained by use of Brownhoist.....	\$161.83

In the face of this graphic instance of the dividend paying possibilities of the Brownhoist—can you afford not to investigate the possibilities of a Brownhoist on your road?

These actual time and money saving railway jobs, shown on this page every month, are made possible by the three cardinal features of the Brownhoist—namely—Speed, Durability and Safety.

Our new Catalog I on "Locomotive Cranes" illustrates many time and labor saving jobs on railway work. Have you a copy? Write.

**Quality****Service**

Courtesy in Business

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

Berry Brothers' Railway Varnishes

Need no introduction to experienced railway men. For nearly 60 years they have been the standard of railway varnish quality and their constantly increasing sale is undisputable testimony of their great efficiency.

Here are a few valuable finishes for railway use.

Inside Coach Finishing

A high grade varnish, very pale, heavy bodied and well matured. It is an easy working, free flowing varnish and dries quickly and hard with an attractive lustre.

Outside Coach Rubbing

A very pale, easy working varnish, dries quickly and can be rubbed in two days.

Inside Coach Rubbing

A superior rubbing varnish, is light in color, dries and hardens quickly, rubs easily and makes an ideal surface for the finishing coats.

Luxeberry Wood Finish

A high grade interior varnish for Stations, etc. Can be rubbed and polished if desired.

Outside Coach Finishing

A pale full-bodied varnish that dries dust free quickly. It is very durable, resisting wear and tear and dries with an attractive lustre.

If you have not already received a copy of our new catalog of Railway Varnishes, write us today, for the best catalog of its kind ever published.

Superintendents of Motive Power, Fuel Agents, Officials in Charge of Operation

Should investigate the merits of the Dearborn Method of Water Treatment.

It is inexpensive—costs less than any other method.

It is effective—the waters requiring treatment are analyzed, and the treatment made to meet the actual requirements.

It accomplishes—the removal and prevention of scale—stops leaks—prevents corrosion—overcomes all foaming trouble.

The benefits—life of boiler tubes greatly lengthened—expense for boiler work reduced to minimum—mileage between boiler washings increased—large saving in fuel effected by having boilers free from scale. All the troubles due to bad water overcome and service generally improved.

Experts furnished to instruct in application of treatment.

Now used on more than 100 American railways.

Dearborn Chemical Company of Canada, Limited

Office and Works : 1220-1230 Dundas Street, Toronto, Canada

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE—INTERCOLONIAL RAILWAY

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 28½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

Montreal Locomotive Works, Limited

PREPAREDNESS—Many of our customers have been applying large numbers, and in some cases complete installations, of Tate Flexible Staybolts to their locomotive fireboxes, and thus are prepared to handle the heavy business during the present season.

THE TATE FLEXIBLE STAYBOLT has been used quite extensively since 1904 in the locomotive fire boxes, and its service records all go to prove that it has done more to improve conditions of staying and preserve the life of the firebox than any staybolt so far used.

WE RECOMMEND THIS BOLT to the railroads of Canada and to all users of the fire-box type of boiler where staybolts are necessary, with the assurance that it will be found strong, serviceable, economic and most effective in reducing staybolt breakage and firebox repairs.

OVER 16,000,000 BOLTS IN SERVICE.

RESULTS COUNT

That's Why 480 Railroad Shops Are Using Thermit

Thermit offers the only sure and reliable repair for locomotive frames and other heavy sections.

The superheated liquid Thermit steel is produced in bulk and poured all at once into a mold surrounding a broken section, resulting in the perfect amalgamation of the Thermit steel with the parts with which it comes in contact. The fact that those parts are first preheated, makes the weld doubly sure.

The operation of welding locomotive frames is easily accomplished, without removing the frame from position, and with very little dismantling, no matter if the frame be broken in the splice, jaw, next to the cylinder saddle, or at any other point. The engine is returned to service in from ten to twelve hours.

Hundreds of thousands of pounds of Thermit are being used annually by railroad companies in the United States and Canada.

There is only one reason for this, and that is that Thermit produces results and we all know that "results count."

Our pamphlet No. 2144 will be of interest.

All Thermit and Thermit appliances are made in our Canadian shops.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

CARBON PRODUCTS

What are your carbon needs? No matter what class of carbon products you require we can serve you satisfactorily.

LIGHTING CARBONS—Head-light carbons in all sizes and shapes for all classes of headlight service.

Carbons for all styles of open, enclosed and flaming arc lamps.

Searchlight carbons in all sizes for any class of searchlight service.

WELDING CARBONS—A complete line of carbon points for welding, repairing and cutting metals by the electric arc process. Also carbon plates, carbon blocks and carbon paste for backing up welding processes.

CARBON BRUSHES—A complete line of carbon, graphite and metal composition brushes to meet every motor and generator operating condition. We not only make carbon brushes, but we "prescribe" them—the right grade for your machine.

CARBON ELECTRODES—All sizes and shapes for electric furnaces. We make electrodes from a fraction of an inch to two feet in diameter.

CARBON SPECIALTIES—Anything in manufactured carbon. In short, "If it's carbon—we make it."

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

Why?

A defective signal wire might easily cause just such an awful wreck as this.

Why take the chance?

To safeguard your road against such catastrophes you should not only have the best signalling equipment but you must use

Northern Electric Railway Signal Wire

No conditions impose a severer test on wire than those used in connection with a railroad signalling system.

Northern Electric R.S.A. wire meets the R.S.A. specifications in every particular and goes a step further—it meets the more rigid Northern Electric specifications which gives you, the user, double protection.

Buy your wire and cable from the largest makers in Canada.

The Trained Man Wins

In the railroad business it's the *trained* man who wins. Carrying hundreds of millions of passengers every year, it is absolutely necessary that the responsible positions in railroading be filled with none but the most highly trained men. *Your* advancement will depend largely on the thoroughness of your training.

If you really *want* a better job and are willing to devote a little of your spare time to getting ready, the **International Correspondence Schools** can help you. More than two hundred of the railroad systems of the United States and Canada have indorsed the **I. C. S.** method of instruction and recommended it to their employes.

You're ambitious. You want to get ahead. Then don't turn this page until you have clipped the coupon, marked the line of work you want to follow and mailed it to the I. C. S. for full particulars. Doing so will not obligate you.

INTERNATIONAL CORRESPONDENCE SCHOOLS

Box 8409, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

Canadian Railway and Marine World

October, 1916.

The Handling of Railway Scrap or Salvage.

By E. J. McVeigh, General Storekeeper, Grand Trunk Railway System, Montreal.

The subject I try to deal with in this little paper is scrap or salvage. The word is so familiar that it might seem superfluous to define it here, and yet I have hopes that some may not know all that there is to know about it. I would be glad indeed if there are a few who know as little about it as a friend of mine in Ottawa. You will remember the great fire of 1898 that wiped out a considerable portion of the cities of Hull and Ottawa. In that year the price of scrap was at a high level, and scrap men from all over the North American continent gathered at Ottawa to bid against each other for the scrap that was lying in the track of this fire. Some of the monied men of the city became aware of what was going on and concluded that they would like to have a share of this business, so they selected my friend as their representative, loaded him down with money, and sent him out to buy scrap in competition with the experts who were swarming over the ground. My good friend proceeded to get busy, and was about to close a deal for a quantity of material when it occurred to him that he would call me up and ask my advice. When he told me what he was trying to do, and gave me the details of the deal that he was about to close, I asked him what he knew about scrap anyway, and his reply was, "Why, scrap is scrap, isn't it?" and then I begged him to come and see me before he went any further or the fellows that he was dealing with would not only have his clothes, but his shirt. After I had had an interview with him and told him a few things about scrap, he concluded that he would not put the experts out of business that year; and he returned the money to his friends, much to their disgust, as they had visions of large profits. These men were not aware of the fact that the scrap business of this continent is one of the best organized lines of trade that is carried on in the country, and is handled largely by experts, and these experts lost money on Ottawa scrap that year.

The word scrap does not, I am afraid, fully describe or cover the thing that we are dealing with. If you look in your dictionary you will find the definition of the word as "a small piece, fragment, or crumb," and as we proceed you will realize that the expression "small fragment or crumb" can hardly be properly applied in this case. The word as used in the railway world is supposed to cover all of our material that has been used for the purposes for which it was made, and discarded as of no further use in its then existing form, and must be returned to be made over into its original form or into some other form in which it can be made use of. It would be interesting to know just what this fragment or crumb amounts to. An ordinary American railway makes \$40 worth of miscellaneous scrap each year for each mile of road operated. We have

on the American continent 271,106 miles of railway, at \$40 a mile. This amounts to \$10,844,240; and we must add to these figures car wheels, discarded locomotives, released rail, structural steel and brass, which would bring our figures close to \$50,000,000. This is some fragment or crumb. The creation and sale of scrap by railways is, of course, no new thing. It has been going on ever since we had a railway. But it has never received from the railways themselves the attention that it deserved. It was one of the things that was everybody's business, and, as usual in such cases, it was nobody's business; and if we could today secure figures showing what the railways of America have lost through the careless handling of scrap, we would begin to understand why Mr. Brandeis got the idea that we were wasting a million dollars a day. The people of America are, I suppose, the greatest wasters the world has ever seen, and it was natural and human that they should be, because in the beginning there were a very few of us, and there was a very large country, and I believe the expression "inexhaustible resources" was coined in America. There is no more mischievous expression in the English tongue; it has been responsible for much of our foolish and wasteful ways.

We learned how to waste before railways came into existence, and we are only slowly unlearning that lesson, and in this matter of scrap we wasted probably a little more than along other lines. By multiplying the kind and class of locomotives and cars we created more scrap than we should have, and after it was created we did not handle it to the best advantage. In this world there are people always prepared to turn to their advantage their neighbors' mistakes, and the railways' neglect of their scrap has enriched many middlemen. Unfortunately the fortunes made by these men did not anywhere near represent the loss suffered by the railways, for the reason that in the scrap purchased by them was much good useable material that could not be used by others than the railway, and the middlemen made no more out of this than they did out of the material that was actually scrap.

The plan of handling and disposing of this material on the majority of American railways has been for the departments to send into the purchasing office an estimate of the quantities on hand at the various points, and the purchasing office would offer it for sale, depending entirely on the parties making the reports as to the correctness of the reports, and also depending on them for the proper loading of the material when the sale was made. As only carload lots could be sold there was generally at the end of the selling period as much scrap on hand as had been sold, and this was carried over from year to year to the railways' very considerable loss. Some years ago the Railway Storekeepers' Association took up this question very

seriously and appointed committees to study the matter and recommend proper methods of handling. One of the first things they did was to classify the scrap. This is divided under 98 headings, as follows:

[Editor's Note.—Space will not permit of printing the entire list, but the following headings are given as examples.]

- 1 Arch bars and transoms, iron.
- 2 Arch bars and transoms, steel.
- 3 Axles, iron. Driving and other axles, 6 in. diam. and over.
- 4 Axles, steel. Driving and other axles, 6 in. diam. and over.
- 5 Axles, iron. Car, tender, engine truck and other axles, car and locomotive, under 6 in. diam.
- 6 Axles, steel. Car, tender, engine truck and other axles, car and locomotive, under 6 in. diam.

A form for storekeepers to report on is supplied headed as follows:—

REPORT of SCRAP on HAND AVAILABLE
for SALE
At Storehouse 191...
Signed S.K.
Date 191...

Standard Classification
Railway Storekeepers' Association
No. DESCRIPTION. Quantity.

The form has the whole 98 headings printed on it, with description of the different items as shown in the specimen of headings given above. Storekeepers are required to fill out and send to the general storekeeper on the 4th of each month, reporting quantities in gross tons and including all scrap available for sale, except that for which sales orders are held. Barrels are reported by carload.

The next thing advocated by the association was the central scrap yard, where all scrap material would be collected and sorted, so that the best price possible would be secured at time of sale.

In this world we always have those who lead, those who follow, and those who refuse to do anything. In this matter of the central scrap yard one of the great roads of the United States has gone a little further than any other, and their experience should be an object lesson to every other road on the continent. The road that I refer to has over 6,000 miles of track, and they were so situated geographically that the best market for their scrap material was at one end of 6,000 miles of rail, but they did not hesitate to collect their scrap and bring it to this point. The first discovery they made was a startling one, which was that out of the enormous tonnage brought into this yard it was found that 40% was good useable material, and the value of this 40% as they selected it from the actual scrap amounted to \$175,000 a month. When this became known the departments became more careful in handling their material, and the good material found in the scrap gradually diminished, until today it amounts to only 6½% of the gross tonnage. In connection with this yard these people have established a salvage and manufacturing plant, and with even the small percentage of good useable

material that they now rescue from the scrap pile the yard is paying a net profit of \$25,000 a month. In addition to this they have their scrap sorted and classified, so that they secure the best possible price; and as this will average them from \$2 to \$4 a ton of an increase over what they would receive if the scrap was unsorted, the gross profit from this yard runs into very high figures indeed. I mention this road in particular for the reason that, as I said before, it has gone a little further than any other road on the continent in the handling of scrap and salvage, but other roads have established yards and gone a considerable distance along the same lines. In each case they have shown a good saving or profit, and you would think that with such data available every road in the country would have established yards by this time, but such is not the fact. Like all other questions pertaining to supply, our railways are inclined to side-step this thing and hope that it will work out its own salvation. "Where ignorance is bliss, it is folly to be wise," says the old saw, but where ignorance is loss it is well to get wise.

One of the most mischievous fallacies in the railway world is the idea that the man who uses the material would be the proper custodian of the material, and that the man who makes the scrap is the best man to handle it. Nothing could be more wrong than this. Would anyone with proper understanding claim that the man who throws good material into the scrap pile is the best possible man to take it out again? Good material finds its way to the scrap pile in various ways and for various reasons. Like every other evil thing in the world ignorance plays a large part in this game. But this is not the main reason. Men whose business it is to build and repair cars and locomotives like to have new material for their work, and the scrap pile is always handy to receive the second-hand material that they do not wish to use. Then again being human they frequently make mistakes and requisition for material that they do not require. Again the scrap pile comes in very handy as a grave wherein to bury their error. And as they have in the past not only made the scrap and placed it in the pile, but loaded it for sale, there has been no check on such actions and they have got away with it.

Had I made this statement some years ago it would naturally have been challenged by the men of the department, and it will be challenged today, but I can prove the statement. A few years ago I might have had difficulty in doing so without visiting various shops and inspecting the scrap pile, but today we have the records from the central scrap yards which prove that the condition was very much worse than any of us supposed. Let us look for a moment at a few of the items that are today being rescued from the scrap in the central yards:—Car replacers, coupler springs, locomotive springs, draft rigging, couplers, brake wheels, draw bar followers, nuts, bolts, knuckles, chainings, angle cocks, stop cocks, train line heads and nipples, steam heat heads and nipples, train line hose bag clips, steam hose clips, pulley blocks, shovels, picks, track bolts, track spikes, brake levers, brake cylinders, triple valves. These are a few of the items that are picked from the scrap that require little or no labor expended on them before they are turned back for use. But in addition to these there is much material, that can be worked over at small outlay and used in place

of material purchased, at much less cost.

Anyone going into the business of reclaiming material from the scrap pile must have a thorough knowledge of what he is doing, or he is liable to lose instead of make money for his company. Or to put it in another way, the handling of scrap is a man's job. The better the man the better he will have the job done, and I have yet to meet the man who knows all about it; and this reminds me of a little incident that occurred some months ago. I was discussing this business with a man who is probably the leading scrap dealer of Canada, and I remarked to him that I was sorry that I could not devote more time to this matter, as I did not yet know all there was to be known about it. His answer was, "Well, why should you expect to know all about scrap? Scrap is my business. I have been at it all my life. I do nothing else, and I am a long way from knowing all about it myself." Such a speech coming from such a man helps a fellow to bear up under the load of his own ignorance.

The railway storekeepers of America have been the pioneers in the effort to secure for the railways the full value of their scrap and in the movement that we call reclamation, meaning the reclaiming from the scrap pile material that could be used to advantage. In advocating the establishment of central yards to which all scrap on the railway would be brought for handling, we are up against the idea that to do this will mean extra expenditure. Now the storekeepers claim to be the economy men of our railways, and we would be very poor economy men indeed if we advocated spending money for which we received no return. We claim that we have proved beyond dispute that the central scrap yard is a money saver or a money maker. If all scrap originating on the road is sent to a central yard there is no further labor being spent on it than the mere loading on cars. The labor saved at the various outside points will be more than sufficient for handling the scrap in the yard. Then it has been found that the good useable material rescued from the pile always more than pays for the labor expended. If you add to this \$2 a ton in the selling price of your scrap properly sorted, you will need little further argument to prove that the central yard is a good proposition. If you want actual figures you have merely got to consider a yard that handled 30,000 tons of scrap in the year. If you increase the value of this scrap by \$1 a ton you have \$30,000. Double this and you have \$60,000. It is a bold man who will ask his company to spend money on new ideas, but with such figures as these to back us up we should have the courage to ask for what we require.

In establishing a central yard we should have a self-propelling crane with a magnet. This crane and magnet will do the work of about 30 men in the actual handling of material. But it would go further than that as it will shunt your cars and save the time of a shunting engine and crew. As the cars come into the yard the material should be unloaded with the crane and magnet on to one pile. From this pile it should be carefully sorted by hand and distributed in smaller piles, according to classification, the good useable material being removed at this time. Then when the scrap is sold the crane and magnet can load it again at the rate of 200 tons a day, and right here we can effect another large saving. By hand labor the loading of this 200 tons would cost us about

40c a ton. Loaded with the crane it would cost less than 10c. Some people claim to do it for less than 5c, but I want to be liberal and on the safe side. This will mean a further gain of 30c a ton; and while we are loading at the full capacity of the crane we are making \$60 a day, which would mean that we would pay for our crane in 166 days. How many pieces of machinery does a railway possess that would pay for itself in less time than this? Until the central yard is established we cannot use a crane and magnet for the loading of scrap, for the reason that the scrap is not sorted properly and must be sorted while being loaded. And this brings us to another phase of the question. In handling scrap under the old plan of having the department do the reporting, sorting and loading, we are constantly receiving claims for improper classification. That is, the receiver of the material will always claim the full amount for everything he finds in the car that is below the classification specified in the sale, and this claim must be allowed, and this is a loss that you can put into figures. But you hear nothing from the buyer for material that he finds in this load that is above classification, and this is a loss that you cannot put into figures and that you know nothing about.

In addition to the loss suffered through improper classification there is the other and greater loss that I have mentioned before of the good useable material that is thrown into the scrap by the mechanical people and, when the scrap is loaded by them, sent away to the buyer. What does this amount to? It is a hard question to answer. Most of us will say we don't know. The mechanical man will say it does not amount to anything; of course he will. It is the old plea of not guilty. But it so happens that I have a few figures that I can give you. The storekeepers of the railways in the United States and Canada are today, and have been for some years, helping each other out by passing along information. A friend of mine on a U. S. road had some 200 carloads of scrap to dispose of, and it was to be loaded by the mechanical men. He had been studying this matter and he asked that he be permitted to sort and load the material. He did not have a central yard. He was told never to mind, that the mechanical men had always done it and they could do it again. Well, they did it, but my friend was not happy. You all know the story of the Jew who was told that the ship he was on was sinking and he replied, "Vell, let it sink, it don't belong to me." This man was not built along these lines. He felt that his company was losing money, and he wanted to stop the leak; he wanted proof. So he stopped two of these 200 cars that had been loaded by the mechanical people and unloaded them with his own men. He sorted it and reloaded the cars, keeping out the good useable material, then listed up what he had got out of the two cars and priced it. The value of that material was just a little over \$1,800. From two cars taken at random out of a lot of 200. Now do a little figuring and see what the loss was. The two loads had been sold for less than \$1,800, and they contained that value of good material. Do you say that this was an exceptional case? Well then, how about the scrap yard that I mentioned before where they found that of the total tonnage coming in 40% was good material. This is, it seems, strong circumstantial evidence, and men are hanged on circumstantial evidence.

There is another phase of this scrap business that has not received the attention it should. The scrap pile tells a wonderful story of success or failure to those who study it. We buy material and use it. It gives us good, fair, or poor service. How many know about it? A few here and there. And quite frequently those who know consider it in their interest to hide that knowledge. And how are our officers to learn these things? They can't run around looking over all the little scrap piles on the system. But suppose we have a central yard. They can and should go there occasionally and see for themselves what is going on. The scrap yard should be in charge of the stores department, but representatives of all departments should visit it just as often as they can to learn things for themselves and help along the good work by giving the men in charge the benefit of their knowledge. They will be welcome as the flowers in May.

Now it may seem that I have cast reflections on the mechanical men in this matter. Well, I have nothing to take back, and could say much worse things than I have said or intimated. But we must look at things in a proper light or from a proper standpoint. The car man's business is to repair cars. The locomotive man's business is to repair locomotives. That is what he is paid for. If he does his work well he stays on the payroll. Is it any wonder then that he is interested in that work? And he has enough of such work to do to take up most of his physical and mental energy. How then can we expect him to take that interest in scrap that the matter deserves? He can't, and he won't. And when we ask and expect him to do it we, and not he, are to blame for the results. The handling of scrap is properly the work of the stores department. We give the mechanical men their new material, not always just as promptly as they want it of course, but we do give it to them. So let us take their old material from them and make the best possible use of it, put it in shape to receive the best possible price for it as scrap, or rescue the good material and turn it back to be used. When we send them their new material they catch our mistakes, if we ever make any? And when they return the old, we will catch theirs. All in the interest of the company we work for.

The railways of America have been for many years destroying old cars that have outlived their usefulness. Some roads in the extreme west have taken their old cars out in the mountains and dumped them into a gorge. There was a reason for this. They had no market for scrap out there, and they figured that to dismantle the cars, collect the scrap and haul it east would cost them more than the scrap was worth. Railways in the east and middle west have disposed of their old cars in various ways, but most of them have disposed of them by allowing their car department to destroy them by burning, the scrap to be sorted by the same department. Nine out of every ten men who do not understand this matter fully will say that is a good plan. The car man builds and repairs cars. He is just the man to destroy or dismantle them. Well, the nine men would be wrong. The stores department should do this work. Why? Because they are material men by training. Does that sound strange? Well, let me say something here that is not often thought of or spoken about. To become a thoroughly competent master car builder,

master mechanic, roadmaster or storekeeper on a railway a man must put in a number of years at his work that if put in at college and special training would make him a doctor, lawyer or college professor, and this applies to many other railway occupations in addition to the few mentioned. If this is true, and I think it is, then is it not only reasonable that the men with such training should do the work for which they have been trained. In other words, let the car man look after his cars, the locomotive man his locomotives, and keep them fit for use as long as possible. But when they are no longer of use as cars or locomotives they become material, to be sold or saved, and they should be returned to the material man. When the car people are called on to dismantle or destroy cars they look on it as an extra and disagreeable job to be got rid of as quickly as possible. They quite often have to use men at this work whose services they require elsewhere, and men to whom they pay more than laborers wages, while it is a job for laborers. Is it any wonder then that the thing is rushed through under the key note of destruction—let the tail go with the hide idea, rather than with the idea of reclamation, or save the tail and as much of the hide as possible?

There have been published recently two very interesting papers on this subject, one by a car man and one by a storekeeper, both from roads in the United States, and in these papers the car man and storekeeper agree for once, that the methods followed in the past in the destruction of old cars has been all wrong, and that if the cars are handled by the stores department the work will not only be done cheaper, but a very large saving be effected by the saving of useable material, and increased price procured for the scrap when saved from fire damage and properly sorted.

Referring to a paper I read before the Storekeepers' Association in 1912 I find I used this expression, "In considering anything we should first of all consider whether it is worth considering," and I believe we have established the fact that the scrap or salvage of our railways is well worth all the consideration we can give it. The creator of the world is above all creation because He can create. Man is above the rest of the animal world in that while he cannot actually create he can, and does, take the material furnished by the creator, and by the use of the talents given him combine and fashion these elements into the forms he requires, the forms suitable to his needs. In this he comes close to actual creation and rises to the point where he is just a little below the angels. In the combining of these elements and the fashioning of them to his needs is man's highest work. How far behind this highest is the work of him who, after these combined elements have served man's purpose in the forms in which he has fashioned them, stops them on their way to destruction and, with less labor and effort than first expended on them, returns them to man's use. Make no mistake about it, the scrap man is doing a wonderful work in the world. It is true he is not so highly regarded as the merchant who in his beautiful store sells at a profit that which other men brought into existence, but he is doing a more useful work, for he is saving something, and he is receiving his reward.

To go back to my paper of 1912 I find this: "How many of us can honestly say that in this matter of salvage we have

done all of the things we should have done, and left undone all of the things we should not have done. In other words, do we know that this part of our business has been handled to the best possible advantage? Is it not a fact that there has been a divided responsibility in this matter that has not tended to the best results? On whose judgment is much of our material put into the scrap pile, and just how thoroughly is that scrap pile culled over before it is delivered to the buyer? These are questions we should ask ourselves, consider them carefully, and answer honestly. We waste more or less, but as we gain knowledge we should waste less rather than more. Our railways do not waste more in proportion to the magnitude of their undertakings than do others in other branches of human effort, but we do waste. Fifty per cent. of all our loss and waste is the result of lack of education, the balance is pure 'cussedness.' This lack of education is not confined to any class or department. That we have insufficient storage facilities is due to lack of education on the part of our higher officials. They have not been educated up to see the necessity for them. The abuse of oil cans and tinware is due to pure cussedness on the part of those using them. The holding of valuable material by section men is due to lack of education or proper instruction. The loss in air and steam heat, hose and couplings is a combination of the two evils."

Further on in that paper I noted this, with reference to doing the salvage work: "Do not let us place such work in the hands of cheap men, men who do not know what they are doing. The best we have and the best we can get is none too good for this job, and no matter how good he may be he will still want the advice and assistance of the car man, the locomotive man and the storekeeper. We must guard against further waste in trying to effect a saving."

The economy game on a railway is a man's game. Any fool can spend money, the greater the fool the more money he can spend and the less he will get for it. But it takes a man and a wise man to save money for our railways, and we have but few men today who are fitted for the job. Some years ago one of the technical papers published an article in praise of a shop foreman who had made much money for his company by taking from the scrap pile 12-in. ends of 2-in. square steel and making coal hammers for locomotives out of them. This amused me so much that I wrote the editor, giving him the actual cost of a coal hammer made in this way, and gave him the cost of a coal hammer we were using. The foreman's hammer made from the square steel cost \$1.45. The hammer we were using at that time cost 10c. I also asked him if he thought I could buy this foreman's scrap pile where he had 12-in. pieces of tool steel. The editor asked me to please excuse him for not publishing my letter and figures, as he did not care to emphasize the fact that he had been as big a fool as the foreman who had misled him.

Not so very long ago I found a shop foreman making track cold sets from scrap tires. He was wasting money very fast by destroying good scrap by wasting coal and labor on it. You may hear men tell of making spanners from old steel crank pins. When you hear such talk stop and do a little figuring. A crank pin that would make a spanner would weigh 10 to 15 lb., as scrap it

would sell for say 8c. Now you use coal to heat it, labor to draw it out, shape it, and finish it off. Figure that all out and then look up the price of a spanner purchased. When you find that you can buy two spanners at the cost of making one out of a crank pin, you will likely say the whole business is a farce. But you would be wrong, it is not a farce, but some people go at anything wrong; they start out without sufficient knowledge, they see one end only. And that is why I say this is a man's game, an all-round man, a man who can see both ends and the middle, and still has a mind open to learn every day. Such men must be both born and made; they must have a natural bent toward economy and saving, and must have years of training on top of that. That is why I say we have few men today who are fitted for the job. But while we may laugh at some of the men who have got off on the wrong foot in the race, we must do so in all good nature, for after all they are the fellows

who have the right idea and will learn by their own mistakes. They are at least ahead of the man who does nothing, and there is a lot to be done.

To quote once more from my paper of 1912 on the conservation of waste: "This has been the age of steam; the signs of the times point to the fact that we are entering the age of electricity. I see on every side indications that we are going to repeat in the electrical age the same kind of mistakes we made in the age of steam. Must we do this? Can we make no advance without waste, fearful waste? Perhaps not, but we can at least try. Let us sound the warning in season and out of season. Let us learn the meaning of conservation and keep it before us always. Remember, it is not a fad; it is anything but that. It has come to stand for the life of the individual, the life of the railways, and the life of the nation."

The foregoing paper was read before the Canadian Railway Club recently.

Birthdays of Transportation Men in October.

Many happy returns of the day to:—

E. W. Beatty, K.C., Vice President and General Counsel, C.P.R., Montreal, born at Thorold, Ont., Oct. 16, 1877.

L. S. Brown, Superintendent, Truro, Sydney and Oxford District, Intercolonial Ry., New Glasgow, N.S., born at Nelson, N.B., Oct. 19, 1864.

R. A. Burford, cashier, C.P.R. ticket office, New York City, born at Brooklyn, N.Y., Oct. 4, 1878.

Lieut.-Col. G. E. Burns, ex-Freight Claims Agent, Eastern Lines, C.P.R., Montreal, now District Intelligence Officer, Military District No. 4, Montreal, born at St. Thomas, Ont., Oct. 6, 1863.

K. J. Burns, Assistant General Freight Agent, Great Northern Ry., Vancouver, B.C., born at Rochester, Eng., Oct. 11, 1878.

F. F. Busteed, C.E., formerly Engineer in charge of C.P.R. revision and second tracking, west of Calgary, Kamloops, B.C., born at Battery Point, Que., Oct. 10, 1858.

J. M. S. Carroll, District Manager, Canadian Consolidated Rubber Co., Montreal, born at Ballarat, Australia, Oct. 22, 1877.

C. E. Cartwright, M.Can.Soc.C.E., ex-Division Engineer, C.P.R., Vancouver, B.C., born at Toronto, Ont., Oct. 13, 1864.

A. F. Dion, Traffic Manager, Quebec Harbor Commission, Quebec, born at L'Islet, Que., Oct. 1, 1871.

L. V. Druce, Commercial Agent, G.T.R. and G.T.P.R., Vancouver, B.C., born at London, Eng., Oct. 20, 1873.

C. E. Dewey, Freight Traffic Manager, G.T.R., Montreal, born at Cheshunt, Eng., Oct. 2, 1873.

C. E. Friend, General Auditor, Canadian Northern Ry., Winnipeg, born at Brighton, Eng., Oct. 12, 1871.

W. P. Fitzsimmons, Commissioner of Industries, G.T.R., Montreal, born at Detroit, Mich., Oct. 27, 1868.

G. Hodge, Assistant to General Manager, C.P.R., Montreal, born there Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, District 4, Eastern Division, C.P.R., Ottawa, Ont., born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, M.Can.Soc.C.E., Consulting Right of Way and Lease Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

J. W. N. Johnstone, General Passenger Agent, Reid Newfoundland Co., St. John's,

Nfld., born at Campobello, N.B., Oct. 4, 1878.

W. M. Kirkpatrick, ex-Assistant Freight Traffic Manager, Eastern Lines, C.P.R., Montreal, now on active service, born at Kingston, Ont., Oct. 8, 1874.

W. B. Lanigan, Assistant Freight Traffic Manager, Western Lines, C.P.R., Winnipeg, born at Three Rivers, Que., Oct. 12, 1861.

J. W. Leonard, General Manager, Toronto Terminals Co., Toronto, born at Epsom, Ont., Oct., 1858.

Sir William Mackenzie, President, Canadian Northern Ry., Toronto, born at Kirkfield, Ont., Oct. 30, 1849.

C. Malcolm, chief clerk, Auditor of Stores and Mechanical Accounts, Alberta Division, C.P.R., Calgary, Alta., born at Tatamagouche, N.S., Oct. 18, 1881.

W. T. Marlow, Import Freight Agent, C.P.R., Montreal, born at Limerick, Ireland, Oct. 25, 1872.

R. Marpole, General Executive Assistant, C.P.R., Vancouver, B.C., born in Montgomeryshire, Wales, Oct. 9, 1850.

C. R. Moore, Assistant to Vice President, Construction, Operating and Maintenance, G.T.R., Montreal, born at Hamilton, Ont., Oct. 12, 1867.

Hugh Paton, President, Shedden Forwarding Co., Montreal, born at Johnstone, Renfrew, Scotland, Oct. 5, 1852.

J. W. Porter, Chief Engineer, Hudson Bay Railway, Winnipeg, born at Aberdeen, Scotland, Oct. 15, 1877.

D. Pottinger, I.S.O., ex-Assistant Chairman, Government Railways Managing Board, Moncton, N.B., born at Pictou, N.S., Oct. 7, 1843.

T. F. Rahilly, acting Trainmaster, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., born at Diorite, Mich., Oct. 6, 1892.

H. G. Reid, Master Mechanic, District 3, National Transcontinental Ry., Transcona, Man., born at Pembroke, Ont., Oct. 27, 1863.

A. G. Richardson, District Passenger Agent, C.P.R., Winnipeg, born at Rockford, Ill., Oct. 16, 1880.

W. S. Rollo, joint agent, G.T.R., and Central Vermont Ry., St. Johns, Que., born at Dundee, Scotland, Oct. 8, 1852.

J. K. Savage, Superintendent, District 1, Saskatchewan Division, C.P.R., Regina, born at Forreston, Ill., Oct. 5, 1876.

Lord Shaughnessy, K.C.V.O., President, C.P.R., Montreal, born at Milwaukee,

Wis., Oct. 6, 1853.

T. Duff Smith, Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, Man., born at Barking, Essex, Eng., Oct. 2, 1868.

F. Stamelen, Night Locomotive Foreman, C.P.R., Winnipeg, born at Chatham, Ont., Oct. 16, 1863.

E. Sterling, Superintendent, Districts 2 and 3, British Columbia Electric Ry., New Westminster, born at Thornbury, Ont., Oct. 3, 1875.

C. E. Stockdill, Assistant to Vice President and General Manager, Western Lines, C.P.R., Winnipeg, born at London, Ont., Oct. 25, 1881.

E. N. Todd, Division Freight Agent, Eastern Division, C.P.R., Montreal, born at Huntington, Que., Oct. 17, 1879.

J. H. Valteau, Secretary-Treasurer, Thousand Islands Ry. and Oshawa Ry., Gananoque, Ont., born at Selby, Ont., Oct. 14, 1889.

A. W. Wheatley, President, Lima Locomotive Corporation, Lima, Ohio, born at Ashford, Kent., Eng., Oct. 12, 1870.

Canadian Pacific Railway Mileage.

Following are the mileages as at June 30:—

Included in C.P.R. traffic returns	12,993.6
Other lines worked	383.6
	13,377.2
Minneapolis, St. Paul & Sault Ste. Marie Ry.	4,228.3
Duluth, South Shore & Atlantic Ry.	627.7
	4,856.0
	18,233.2

Canadian Pacific Railway Pension Fund.

Following is a statement as at June 30, 1916:—

Balance to June 30, 1915	\$585,548.13
Contributed by company for year	125,000.00
Received as interest	43,609.82
	\$754,157.95
Payment of pension allowances for year	240,222.94
Balance in cash and investments	\$513,935.01
NUMBER ON PENSION ROLL, JUNE 30, 1916.	
Under 60 years of age	60
Between 60 and 70 years of age	445
Over 70 years of age	329
Total	834

Pacific Great Eastern Ry. Investigation.—H. C. Brewster, leader of the Liberal party, which carried the British Columbia provincial election recently, is reported to have said in a press interview:—"We will investigate the Pacific Great Eastern Ry. finances and have a strict accounting of every dollar of public money that has been spent in connection with that road, with the idea of recovering as much as possible of all that has been mis-spent."

The Traveling Engineers' Association's annual convention, which was to have been held at Chicago, Ill., Sept. 5 to 8, was postponed to Oct. 24 to 28, the Secretary, W. O. Thompson, Cleveland, Ohio, issuing a circular stating that on account of the serious labor conditions in progress with the four brotherhoods, the executive committee deemed it wise to postpone the meeting.

Protection for Car Men from the Weather.—The Regina, Sask., Trades and Labor Council has passed a resolution calling upon the Trades and Labor Congress of Canada, to take up with the Board of Railway Commissioners the protection of railway car men from the inclemency of the weather.

Railway Mechanical Methods and Devices.

Oxy-Acetylene and Electric Welding in Winnipeg Shops, C.P.R.

The following information, with the accompanying illustrations, will give a good idea of the extent to which the above mentioned methods have been adopted in the C.P.R.'s Winnipeg shops and the amount of saving effected:—

from the road on account of worn crossing points. The parts whitened were built up by an oxy-acetylene operator, rail metal being fed in in the building up process. The entire cost of repair was \$19.70, while the original diamond

the worn place and plane it off costs only \$5.

Fig. 4 shows a patch inside a locomotive in position ready for the welder; the crack was whitened to show it up. It will be particularly noted that the

Fig. 1. Welding Work in Steel Car Shop.

The following description with the accompanying photographs will give an idea of the extent of the application that we have arrived at and the amount of saving effected.

Fig. 1, from a photograph taken in the steel car shop, shows a representative group of work handled by this department. Column castings seen in the foreground of the photograph show the extent of the wear on the faces, in fact the face is worn right through. By welding a plate on these faces the casting is made equal to a new one at a cost of 48% of the price of a new one.

Bolsters are similarly repaired, where before the application of oxy-acetylene or electric welding they were scrapped. The same photograph shows a bolster that has been welded up, which cost \$32.40 when new and \$10.60 to repair. This repair cost includes cost of new castings and repairs to bottom strap as well as the welding. This is less than one-third of the original cost.

The two couplers shown standing in the background (unfortunately the

Fig. 2. Welded Track Diamond.

Fig. 5. Sheet Inside Fire Box Ready for Welding.

Fig. 3. Welded Track Frog.

wrong way up) represent a large industry in itself. Cracks are welded and lugs that are broken off are welded up again, and the whole from service test is equal to new.

Fig. 2 shows a track diamond taken

cost over \$250.

Fig. 3 shows a track frog 85-lb. rail. It is a similar example of the saving brought about by oxy-acetylene welding. To repair the frog by renewing the rails would cost \$29.70, whereas to build up

Fig. 4. Welded Patch Inside Locomotive.

patch is permanently riveted in position and that no allowances for drawing are made. We have found this method entirely successful.

Fig. 5 shows a side sheet inside a fire-box ready for welding. It will be noted

here also that the drawing of the plate has been entirely and successfully neglected.

For the foregoing information and for the photographs from which the illustrations were made we are indebted to R. A. Pyne, until recently Superintendent of Shops, C.P.R., Winnipeg, and Superintendent Motive Power and Car Department, Eastern Lines, Montreal.

Racks for Holding Triple Valves.

Some very serviceable racks for triple valves built in the C.P.R. passenger car shops air brake department, at Vancouver,

Racks for Holding Triple Valves.

ver, are shown in the accompanying illustration. They are built entirely of scrap. The measurements of each rack over all are 9 ft. long x 21-3 ft. wide x 5 ft. high, carrying four tiers or rows of valves placed lengthwise on the rack. One rack is used for valves to be cleaned and repaired and the other for those in good order.

The frame is of 3-in. angle iron riveted to an upright of the same material. The centre braces are of 1-in. iron pipe, 2 braces to each tier, with a $\frac{5}{8}$ -in. rod running lengthwise through the pipe and fastened with nuts on the outside ends, which make the rack quite rigid.

The capacity of each rack is 130 valves, and their use eliminates having to pile valves on the floor. We are indebted to T. Spence, General Car Foreman, C.P.R., Vancouver, for the foregoing information and for the photograph.

Railways' Coal Consumption.—United States railways in 1915 consumed 24% of the country's total coal production. Practically all of the 600,000 tons of anthracite and 62,700,000 tons of the 128,200,000 tons of soft coal consumed by railways were burned in the eastern district. Railways of the Western district burned 43,500,000 tons, and those of the southern district 22,000,000 tons.

The C.P.R. was reported from Raymond, Alta., Sept. 2, to be negotiating with the night-Svegan Co., for the purchase of its factory and plant there, which has been closed for some time.

Auxiliary Chuck for Turning Piston Packing Rings.

The auxiliary chuck, the separate parts of which are shown herewith, is being used in the G.T.P.R. shops at Biggar, Sask., for holding piston gland packing rings in the lathe while they are being turned. The completed chuck is made up of a centre stem A, enlarged at the centre to form a fulcrum for the three arms B, which take the packing rings. The arms are controlled by the movement of the cones C, placed on either end of the centre stem, which is threaded at both ends for their adjustment. The

tapered shank can be held in the centre bore of the spindle, and keeps the work far enough away from its face so that better work can be accomplished. For details of this device we are indebted to W. W. Yeager, Locomotive Foreman, G.T.P.R., Biggar, Sask.

Cleaning Water Filters in C.P.R. Passenger Car Shops.

In the C.P.R. passenger car shops at Vancouver the dining car water filters are taken apart on a bench or table, which is lined with tinned sheet copper and drains to a sink in the centre. The inside filters are removed and entirely

Auxiliary Chuck for Turning Piston Packing Rings

washed out with warm water, after which they are sterilized in a copper tank, heated with live steam. The filters are then reassembled and tested with water pressure before being returned to the cars. We are indebted to T. Spence, General Car Foreman, C.P.R., Vancouver, for the foregoing information and for the photograph.

The Flying Train Failure.—A few years ago the Batchelet Flying Train & Levitated Railways Syndicate was formed in England, to build and operate systems of levitated railways. An order has now been made for the winding up of the company and a liquidator has been ap-

Cleaning Water Filters in C.P.R. Passenger Car Shops.

ends of the arms which take the packing rings are each made with a lip on the end so that they will grip the rings either from the inside or the outside, thus enabling the ring to be turned completely by two adjustments of the chuck. When the inside and one end is turned the chuck is readjusted to the inside, and the outside and opposite end are turned. This appliance is easily held in the ordinary lathe chuck, or by adapting a Morse

pointed. The idea was based on the application of the principle of electro-magnetic repulsion. The "track" was represented by a series of electric coils with horseshoe shaped solenoids at regular intervals. On these coils being energized, the cigar-shaped aluminium carriage was repelled from the "track," and by similar means, propelled from point to point. It was claimed that a safe speed of 300 miles an hour could be attained.

Canadian Pacific Railway Company's Annual Report.

Following is the report for the year ended June 30, addressed to the shareholders over the signature of the President, Lord Shaughnessy:—

The accounts for the year ended June 30 show the following results:—

Gross earnings	\$129,481,885.74
Working expenses	80,255,965.28
Net earnings	\$49,225,920.46
Deduct fixed charges	10,306,196.06
Surplus	\$38,919,724.40
Contribution to pension fund.....	125,000.00

Deduct net earnings of Pacific Coast steamships, commercial telegraph, and news department, transferred to special income account	\$38,794,724.40
	1,923,288.96
	\$36,871,435.44

From this there has been charged a half yearly dividend on preference stock of 2%, paid April 1..	\$1,613,638.42
And 3 quarterly dividends on ordinary stock of 1¼% each, paid Dec. 31, April 1 and June 30.....	13,650,000.00
	15,263,638.42
	\$21,607,797.02

From this there has been declared a second half yearly dividend on preference stock, payable Oct. 1	\$1,613,638.42
And a fourth quarterly dividend on ordinary stock 1¼%, payable Oct. 1.	4,550,000.00
	6,163,638.42

Leaving net surplus for the year.. \$15,444,158.60

In addition to the above dividends on ordinary stock, 3% was paid from special income.

Following are details of special income for the year:—

Balance at June 30, 1915	\$8,216,144.15
Less dividend paid Oct. 1, 1915	1,950,000.00
	\$6,266,144.15
Interest on proceeds land sales.....	151,170.51
Interest on deposits and loans.....	976,326.08
Interest from Minneapolis, St. Paul and S.S. Marie Ry. bonds.....	159,720.00
Interest from Mineral Range Ry. bonds	50,160.00
Interest from Toronto, Hamilton & Buffalo Ry. bonds	10,237.78
Interest from Montreal & Atlantic Ry. bonds and other securities.....	108,136.03
Interest from Berlin, Waterloo, Wellesley & Lake Huron Ry. bonds.....	17,040.00
Interest from St. John Bridge & Ry. Extension Co. bonds	6,250.00
Interest from Esquimalt & Nanaimo Ry. bonds	193,280.00
Interest from Dominion Atlantic Ry. extension debenture stock	56,940.00
Interest from Dominion Atlantic Ry. 2nd debenture stock	36,986.67
Interest from Hull Electric Ry.	60,000.00
Dividend on St. John Bridge & Ry. Extension Co. stock	70,000.00
Dividends on Minneapolis, St. Paul & S.S. Marie Ry. common stock	890,645.00
Dividends on Minneapolis, St. Paul & S.S. Marie Ry. preferred stock	445,326.00
Dividends on West Kootenay Power & Light Co. common stock	27,500.00
Dividends on West Kootenay Power & Light Co. preferred stock	3,850.00
Dividends on Consolidated Mining & Smelting Co. stock	307,437.50
Dividend on Berlin, Waterloo, Wellesley & Lake Huron Ry. stock	12,500.00
Earnings from ocean steamships and hotels	3,583,292.28
Revenue from interest in coal mine properties	557,842.72
Extraneous mail earnings	216,305.07
Net earnings of Pacific Coast steamships, commercial telegraph, news department	1,923,288.96
Space rented in office buildings	76,720.34
	\$16,207,099.09

Less:—Payments to shareholders in dividends:

Dec. 31, April 1, and June 30.. 5,850,000.00

\$10,357,099.09

From this a dividend has been declared payable Oct. 1, 1916..... 1,950,000.00

The working expenses for the year were 61.98% of the gross earnings, and the net earnings 38.02%, compared with 66.04 and 33.96%, respectively, in 1915.

There were no sales during the year of 4% consolidated debenture stock, preference stock or other capital securities.

The sales of agricultural land during the year were 390,715 acres for \$6,126,108.00, an average of \$15.68 an acre. Included in this area were 8,046 acres of irrigated land which brought \$54.67 an acre, so that the average price of the balance was \$14.86 an acre.

You will be asked to give approval to an agreement between the New York Central, Michigan Central, and Canada Southern Railway Companies and your company, and the Toronto, Hamilton & Buffalo Ry. Co., which, in addition to providing for the interchange of traffic passing over the latter company's lines, provides for the issuance by the T., H. & B. Ry. Co. of 1st mortgage consolidated bonds not exceeding \$10,000,000, bearing interest not in excess of 5% a year, to be issued only with the consent of the other companies, parties to the agreement, and to be unconditionally guaranteed as to principal and interest by these companies jointly and severally.

In consequence of the extraordinary conditions created by the present war your directors considered it advisable to postpone the effective date of the agreement entered into between your company and the Allan Line Steamship Co. and the Canadian Pacific Ocean Services, Ltd., authorized by resolution passed at the last annual meeting, for the acquisition by the last named company of the capital stock of the Allan Line now held by your company and of the vessels of your company named in the resolution. Your directors have, however, though it desirable to enter into an agreement with the Canadian Pacific Ocean Services, Ltd., under which the vessels of both fleets are operated by that company as managers and agents. In view of possible changes in the conditions pertaining to ocean traffic, your directors consider it may be advisable, in your company's interests, that in giving effect to the proposals previously approved a somewhat different plan should be adopted, and a resolution will be submitted granting authority to your directors to carry out the transaction with the C. P. Ocean Services or some other company created for that purpose, of which company your company will have full ownership and control in such manner and on such terms as seem to them proper. The revenue from your steamships given in the statement of special income is exclusive of an amount transferred to the reserve account to cover the cost of replacing ships sold or destroyed, and of a sum sufficient to meet any tax on excess profits that may be ultimately payable.

The relations between the Consolidated Mining & Smelting Co. and the West Kootenay Power & Light Co. were such as to make it desirable, in the interest of both properties, that they should be under one control, and in order that this might be accomplished, your company joined with the other shareholders in the West Kootenay Power & Light Co. in exchanging its holding of common stock in that company for shares in the Consolidated Mining & Smelting Co. on a basis of \$75 of the stock of the Consolidated Co. for each \$100 face value com-

mon stock of the West Kootenay Co.

Your directors appropriated for expenditure on capital account in the calendar year \$3,749,474. Of this, \$1,955,000 was required for the Connaught tunnel in the Selkirk Mountains, and the balance for miscellaneous works of improvement over the whole system.

The profits resulting from the manufacture in your company's shops of munitions of war undertaken at Government request, have not been taken into the operating revenue, but have been applied as a set off against contributions to patriotic and relief funds, and other expenditures by your company directly due to the war and not properly chargeable to working expenses.

The important falling off in the revenue per ton mile for the carriage of freight traffic from 0.76 cents in 1915 to 0.64 cents this year, was largely due to the abnormal increase in the tonnage of grain handled at the very low rates that apply to that commodity, although the reduction in many tariff rates in Western Canada had considerable influence.

There being some doubt as to the right of the company to issue its preference and debenture stocks in dollar currency as well as sterling, the requisite authority to do so was secured by act of Parliament at the last session.

In Nov. 1915 the trustees under the mortgage securing £7,191,500 first mortgage bonds executed a discharge of mortgage and re-conveyance of the property to the company, and the documents have been deposited with the Secretary of State at Ottawa.

E. W. Beatty, K.C., Vice President and General Counsel, was elected a director to fill the vacancy caused by the resignation of D. McNicoll.

The following directors will retire from office at the approaching annual meeting. They are eligible for re-election.—W. D. Matthews, A. M. Nanton, George Bury.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were drawn.

General order 171, Aug. 1.—Directing that railway companies equip certain locomotives with handrails on sides of cabs above windows near top of cab, and tenders with railing on both sides. This order is given in full on another page.

25298, Aug. 19.—Approving agreement between Bell Telephone Co. and Rydal Bank Telephone System, Aug. 15, 1914.

25299, Aug. 21.—Authorizing Blenheim Tp., Ont., to build McLaren drain under G.T.R. on Lot 8, Con. 5.

25300, Aug. 21.—Extending to Oct. 21 time for C.P.R. to build branch at mileage 67.6, London Subdivision, Ont., authorized by order 25176, July 17.

25301, Aug. 21.—Ordering Canadian Northern Ry. to provide proper ditches at subway in Cons. A and 1, Ottawa Front, Nepean Tp., Ont., work to be done by Sept. 15.

25302, Aug. 22.—Ordering Lake Erie & Northern Ry. to commence forthwith and complete within 60 days work ordered by order 19807, Apr. 16, 1913, in connection with location from Lorne Bridge, Brantford, to Main St., Galt, Ont.

25303, Aug. 22.—Authorizing C.P.R. to build spur for Ayers, Ltd., Lachute, Que.

25304, Aug. 23.—Authorizing Bosanquet Tp., Ont., to build south boundary drain under G.T.R. at mileage 143.84, District 15.

25305, Aug. 23.—Authorizing G.T.R. to build branch to connect with siding for Dominion Steel Foundry Co., Hamilton, Ont.

25306, Aug. 21.—Approving agreement between Bell Telephone Co. and Halton Telephone Co., Halton, Ont.

25307, Aug. 23.—Authorizing C.P.R. to make diversion in lieu of road allowance on south boundary of Sec. 13, Tp. 18, R.33, w.p.m., Sask., and to close same within its right of way.

25308, Aug. 23.—Approving plan, profile and book of reference combined showing siding to be built for J. H. Theoret, St. Eustache, Que.

25309, Aug. 23.—Relieving Niagara, St. Catharines & Toronto Ry. from providing further protection at crossing 19 between lots 244 and 252, Thorold, Ont.

25310, Aug. 23.—Amending order 25265, Aug. 26, re G.T.R. track arrangement across Albert St.,

Oshawa, Ont.

25311, Aug. 21.—Approving agreement between Bell Telephone Co., and Blind Line Telephone Co., Aug. 4.

25312, Aug. 24.—Authorizing Canadian Northern Ry. to build bridge over Old Man River in s.e. ¼ Sec. 13, Tp. 9, R. 26, w. 4 m., Alta.

25313, Aug. 17.—Dismissing complaint of H. Miles, Point Fortune, Que., against unloading charge of \$1 a car at Hochelaga stock yards and charge of 75c. a car for cleaning and disinfecting live stock cars as charged by C.P.R.

25314, Aug. 23.—Approving proposed location of Canadian Northern Ry. station at Bienfait, Sask.

25315, Aug. 25.—Approving Canadian Northern Ontario Ry. location, mileage 1.88 to 2.00, from Port Arthur, Ont., and temporary connection with spur to water front.

25316, Aug. 19.—Ordering C.P.R. to install automatic bell at crossing of St. Francois St., Rigaud, Que.

25317, Aug. 24.—Authorizing Canadian Northern Ry. to cross and divert road allowance between Secs. 20 and 29, Tp. 21, r. 12, w. 3 m.

25318, Aug. 18.—Ordering Atlantic, Quebec & Western Ry. to stop trains on flag at Little River East, Que., and approving location of shelter and platform there.

25319, Aug. 25.—Relieving C.P.R. from providing further protection at crossing of Dundas St., Cooksville, Ont.

25320, Aug. 25.—Extending to Oct. 25, time for installation by G.T.R. of gates at the crossings of Waterloo and Colborne Sts., London, Ont.

25321, Aug. 25.—Rescinding orders 17282, Aug. 22, 1912, and 20212, Aug. 28, 1913, which approved revised location of C.P.R. Crownest Pass Branch between Seven Persons and Grassy Lake, mileage 15 to 53.1, Lethbridge Subdivision, Alta.

25322, Aug. 30.—Suspending, until further order, Tariffs, C.P.R. C.R.C. no. E-3176, and Temiscouata Ry. C.R.C. 256, effective Sept. 1, on turnips and potatoes, from points in Maritime Provinces to stations in Ontario and Quebec.

25323, Aug. 26.—Authorizing G.T.R. to build siding to Harrolds Coal Co.'s premises, Toronto.

25324, Aug. 26.—Authorizing C.P.R. to build spur for Canada Iron Corporation, Three Rivers, Que.

25325, Aug. 22.—Amending order 25132, July 4, re building of highway over C.P.R. by Harriston municipality, Man.

25326, Aug. 24.—Amending order 25259, Aug. 5, re protection of Drouillard Rd. crossing, Walkerville, Ont., by G.T.R. watchmen, by substituting Ford City for Walkerville.

25327, Aug. 29.—Approving supplement 1 to C.P.R. Standard Mileage Freight Tariff, C.R.C. no. W-1948.

25328, Aug. 29.—Extending time within which Canadian Northern Ontario Ry. complete opening up of Second Concession Road allowance over its right of way in Goulbourn Tp., Carleton County, Ont., until such time as Goulbourn Tp. has done its part of work in opening up concession line and notified railway company, when company shall proceed with work over railway tracks.

25329, Aug. 30.—Authorizing G.T.R. to build siding, and spurs therefrom, to Harris Abattoir Co.'s premises, Toronto.

25330, Aug. 30.—Authorizing Windsor, Essex & Lake Shore Rapid Ry. to build spur for Champion Brick & Tile Co., Lot 265, South Talbot Road, Gosfield North Tp., Ont.

25331, Sept. 1.—Authorizing Canadian Northern Ry. to cross and divert highway between Secs. 10 and 15, Tp. 6, Rge. 20, w. 2 m., Sask.

25332, Sept. 1.—Authorizing C.P.R. to build spurs at Bradbury, Man., for Manitoba Steel Foundries.

25333, Aug. 30.—Ordering G.T.R. to appoint and maintain, at own expense, watchman at Ottawa Ave., South River Village, Ont., to be on duty between 9 a.m. and 9 p.m. daily.

25334, Aug. 31.—Relieving C.P.R. from providing further protection at highway west of Shoal Lake station, Man.

25335, Aug. 31.—Authorizing Saskatchewan Board of Highway Commissioners to build highway over C.N.R. on boundary line between north and south halves of Sec. 33-33-4, w.3.m.

25336, Aug. 30.—Approving plan, dated June 28, showing proposed alterations in interlocking plant at crossing of C.P.R. and Jacques Cartier Union Rlys. at Ballantyne, Montreal Terminals.

25337, Aug. 30.—Ordering C.P.R. to divert highway at Sagua, N.B.; 20 per cent. to be paid by railway grade crossing fund, \$500 by New Brunswick Government, and remainder by C.P.R. Westfield Parish to acquire necessary lands.

25338, Aug. 21.—Authorizing Toronto and Hamilton Highway Commission to build a highway crossing over G.T.R., in Burlington, Ont., and across the Hamilton Radial Ry. on Maple Ave.; and to divert highway along Water St., and across G.T.R., and Toronto and Niagara Power Co.'s lands.

25339, Aug. 28.—Ordering that Bronson Ave., Ottawa, Ont., be protected by gates, operated by day and night watchmen; 20 per cent. of cost to be paid out of railway grade crossing fund, and of remainder half by city and half by G.T.R.; operation and maintenance divided equally between city and G.T.R.; work to be completed by Dec. 1.

25340, Sept. 2.—Authorizing G.T.R. to build additional track across highway between Cons. 2 and 3, Tres St. Sacrement Parish, Que.

OCTOBER, 1916.]

25341. Sept. 2.—Relieving New York Central & Hudson River Rd. from maintaining watchmen at crossing of highway near Beauharnois station, Que.

25342. Sept. 5.—Ordering C.P.R. to appoint station agent at Fortune, Sask., during Sept. Oct., Nov., and Dec., each year, until otherwise ordered.

25343 to 25345. Sept. 1.—Approving Bell Telephone Co. agreements with Westport Rural Telephone Co., Aug. 16; Monck Tp., Ont., July 13, and Watt Tp., Ont., July 1.

25346. Sept. 7.—Authorizing G.T.R. to build siding for Canada Forge Co., Welland, Ont.

25347. Sept. 2.—Ordering C.P.R. to protect crossing of Main St., Farnham, Que., by gates, operated by day and night watchmen; 20 per cent. of cost to be paid out of railway grade crossing fund; work to be completed within 60 days.

25348. Sept. 1.—Approving agreement between Bell Telephone Co. and Leeds and Frontenac Rural Telephone Co., Aug. 14.

25349. Sept. 1.—Extending for three months from date, time within which C.P.R. shall complete spur and sidings for Dominion Sugar Co., Chatham, Ont.

25350. Sept. 8.—Ordering C.P.R. to build spur on east half of Sec. 23-2-7, w-2-m, mileage 148.9, Estevan Subdivision, Sask.

25351 to 25377. Sept. 7.—Authorizing Canadian Northern Ry. to build its Winnipeg Northern branch across certain highways, at rail level, in Manitoba.

25378. Sept. 7.—Authorizing Canadian Northern Ry. to build across highway between river lots 116 and 115, St. Clements Parish.

25379 to 25388. Sept. 8.—Authorizing Canadian Northern Ry. to build across certain highways in Manitoba.

25389.—Sept. 8.—Authorizing Lake Erie and Northern Ry. to build across Leonard St., Brantford, Ont.

25390. Sept. 8.—Authorizing Canadian Northern Ry. to build spur in s.e. 1/4 Sec. 7-28-19 w-4-m, Alberta, for Western Commercial Coal Co.

25391. Sept. 8.—Authorizing C.P.R. to build second track across road allowance between Secs. 8 and 9-17-23, w-1-m, Man.

25392. Sept. 8.—Authorizing Canadian Northern Alberta Ry. to build spur on n.w. 1/4 Sec. 36-52-22, w-5-m.

25393. Sept. 8.—Authorizing Great Northern Ry. to withdraw for present year mixed train service on its Oroville-Princeton subdivision, required by order 23663, May 4, 1915; withdrawal to take effect Sept. 18, 1916.

25394. Sept. 11.—Amending order 25305, re spur for Dominion Steel Foundry Co., Hamilton, Ont.

25395. Sept. 8.—Authorizing Canadian Northern Ry. to build across Church and Colville Roads, East Selkirk, Man.

25396. Sept. 8.—Authorizing Saskatchewan Government to build highway across Grand Trunk Pacific Branch Lines Co.'s right of way, at north end of Bechard station.

25397. Sept. 8.—Authorizing C.P.R. to build its Kerrobert Subdivision across road allowance between Secs. 16 and 17-30-15, w-3-m, Sask.

25398. Sept. 8.—Authorizing C.P.R. to build extension to Canada Lumber Co.'s siding, York Tp., Ont.

25399. Sept. 9.—Ordering G.T.R. within 60 days to install improved type automatic bell at Lake Road crossing, east of Grimsby, Ont., 20% of cost to be paid out of railway grade crossing fund.

25400. Sept. 11.—Approving C.P.R. plan, Aug. 12, as revised Aug. 21, showing transfer tracks at Government elevator, Moose Jaw, Sask., providing for interchange with G.T.P.R.

25401. Sept. 11.—Authorizing Sunny South rural municipality no. 123, Suffield, Alta., to build highway across C.P.R. between Secs. 14 and 15-16-10, w-4-m.

25402. Sept. 11.—Authorizing City of Toronto to use structure for passage of street cars, authorized to be built east of Strachan Ave. by order 25093, June 17.

25403. Sept. 11.—Ordering Canadian Northern Ry. to fence certain portions of its railway between Vita and Caliento, Man., by July 31, 1917.

25404. Sept. 11.—Amending order 23863, June 15, 1915, re protection of Central Vermont Ry. crossing at St. Armand, Que.

25405. Sept. 11.—Ordering Edmonton, Dunvegan & British Columbia Ry. to build station accommodation for passenger, baggage, express and l.c.l. freight; and siding accommodation for carload freight at Tomkins Crossing, Alta.; station to equal standard station, B.R.C. 1 B, with platform for at least 3 passenger cars; work to be completed by Oct. 31.

25406. Sept. 13.—Authorizing G.T.R. to build spur for Goodyear Tire & Rubber Co., Toronto.

25407. Sept. 13.—Authorizing G.T.R. to build siding and two spurs from north of Eighth St., New Toronto, southwesterly along Ninth St., to Birmingham St.

25408. Sept. 12.—Ordering Canadian Northern Ry. to build siding at mileage 18, Moose Jaw Subdivision, Sask.

25409. Sept. 12.—Authorizing Saskatchewan Highway Commissioners to build highway over C.P.R. spur in n.e. 1/4 Sec. 33-17-18, w. 2 m.

25410. Sept. 12.—Relieving G.T.R. from speed limitation of 10 miles an hour over Talbot Road crossing, Courtland, Ont.

25411. Sept. 12.—Approving plan showing under crossing of Esquimalt & Nanaimo Ry. by Shawinigan Lake Lumber Co.'s logging railway, British Columbia.

25412, 15413. Sept. 12.—Relieving G.T.R. from speed limitation of 10 miles an hour over crossings at Chatham Road, Thamesville, Ont., and near Allanburg station.

25414. July 14.—Ordering that 20% of cost of installing gates at Pembina highway crossing, Winnipeg, by Canadian Northern Ry., be paid out of railway grade crossing fund.

25415. Sept. 12.—Relieving Lake Erie & Northern Ry. from providing further protection at Cherry Valley road crossing, Townsend Ep., Ont., at mileage 38.25.

25416. Sept. 12.—Authorizing Grand Trunk Pacific Ry. to build spurs for Great West Coal Co. in s.e. 1/4 Sec. 7-53-23, w. 4 m., Alta.

25417. Sept. 15.—Extending, for six months from date time within which C.G.T. shall complete spur for International Harvester Co. of Canada, Ltd., Hamilton, Ont., as authorized by order 24801, March 14.

25418. Sept. 16.—Authorizing G.T.R. to build siding with four spurs for Goodyear Tire & Rubber Co., New Toronto, Ont.

25419. Sept. 14.—Ordering Canadian Northern Ry. to erect standard third class station at Palmer, Ont., by Aug. 1, 1917.

25420. Sept. 14.—Authorizing Travers Municipality Local Union no. 188, Alta., to build highway across C.P.R. near Travers station.

25421. Sept. 14.—Amending order 25270, Aug. 14, re two crossings of Grand Trunk Pacific Ry. by Alberta Government at Cooking Lake.

25422. Sept. 15.—Extending for three months from date time within which C.P.R. shall complete spur for Conger Lehigh Coal Co., Ltd., Toronto, authorized by order 25030, June 5, 1916.

25423. Sept. 14.—Ordering Kettle Valley Ry. to fence its track from mileage 22.5 to 30 on the Penticton to Princeton portion by Oct. 31.

25424. Sept. 16.—Ordering Canadian Northern Ry. to build transfer track at Yorkton, Sask., with Grand Trunk Pacific Branch Lines Co.; C.N.R. to pay 4/5 and G.T.P.B.L. Co. balance of cost; both companies to furnish, without charge, necessary land on their respective rights of way for transfer; maintenance to be borne equally and track to be completed by Oct. 31.

25425. Sept. 15.—Extending for three months from date time for construction of extension to Boake Mfg. Co.'s siding for Harry Webb Co., Toronto.

25426. Sept. 15.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to open for traffic its line from Kilgard to Sumas Landing, B.C., mileage 37 to 45.35.

25427. Sept. 15.—Ordering Canadian Northern Ry. to maintain present schedule of trains nos. 9 and 10 in operation between Deseronto and Toronto, pending enquiry by the Board.

Cafeteria for C.P.R. Employees.—For the convenience of employees, of whom there are nearly 2,000 in the Windsor St. Station building at Montreal, the C.P.R. has started a cafeteria luncheon at 15c in a large apartment which will accommodate 251 persons at a sitting. In the offices there are hundreds of girls, especially, who have not time to go home, or who, if they do go home, are greatly pressed for time. With this service at their disposal they will save car fare; will get a satisfying luncheon; and can have on wet or cold days the comfort of the lounge room in connection, which contains a piano, magazines and papers and in which they can rest for the balance of their lunch hour. The arrangement is four to a table. There is still the 30c luncheon upstairs, and the regular dining room with a la carte service; but the cafeteria is strictly for employees, male and female, who prefer to have lunch inside the building to going to restaurants or carrying it from their homes.

The Great Northern Ry. has set aside \$1,000,000 to endow a pension plan for veteran employees. The plan went into effect on Sept. 16, the anniversary of the late James J. Hill's birth. The appropriation will be invested in bonds, interest on which will be used for pensions, but if the fund thus created proves insufficient the deficit will be paid out of earnings and included in operating expenses. Employees are to be retired at 70, but may voluntarily retire at 65 and receive pensions. The system will take in employees who have been continuously in service for 20 years or more.

Railway Finance, Meetings, Etc.

Canadian Northern Railway.—There has been filed with the Secretary of State at Ottawa, a trust agreement dated Sept. 1, made between the Canadian Northern Ry., the Mount Royal Tunnel and Terminal Co., and others, to the Central Trust Co. of New York as trustees, securing an issue of one year 5% gold notes.

There has also been filed with the Secretary of State at Ottawa a mortgage executed by the C. N. R. securing \$15,000,000 repayable on demand, and also mortgages given by certain of the companies included in the C. N. R. system, securing loans made to them out of the \$15,000,000, the companies being as follows: Canadian Northern Alberta Ry., Canadian Northern Western Ry., Canadian Northern Ontario Ry., Canadian Northern Quebec Ry., Central Ontario Ry., Duluth, Winnipeg & Pacific Ry., Halifax & South Western Ry., Quebec & Lake St. John Ry., Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.; Mount Royal Tunnel & Terminal Co. Limited; Bay of Quinte Ry.

C.P.R. Note Certificates.—Hallgarten & Co., and Kean, Taylor & Co., New York, offered recently \$2,500,000 C.P.R. 6% note certificates at 101% and accrued interest, to yield about 5.73%. They are part of a total issue of \$52,000,000, all of which were sold by the company at the time of issue. The prospectus says:—"These notes are a direct obligation of the company, which enjoys an extremely high credit position. At present they constitute the company's only funded debt, with the exception of \$11,280,000 equipment notes maturing serially until 1928 and \$3,650,000 5% bonds of the Algoma Branch due in 1937. As security for these certificates the company agrees that the monies accruing from time to time from deferred payments on lands heretofore sold and interest thereon and from securities in which the proceeds of land sales have been invested shall be set aside for the purpose of paying principal and interest of these certificates. The amount of such deferred payments, securities, etc., aggregated \$56,268,768 on June 30, 1916."

Klondike Mines Ry.—The board of directors for the current year, elected at the annual meeting, recently, is as follows: H. B. McGiverin, President; J. P. Ebbs, Vice President; Andrew Haydon, Secretary; John Latta and C. G. Keke-wich.

Magnetawan River Ry. The annual meeting was held at Toronto, Sept. 13. The following constitute the board for the current year: E. J. Chamberlin, President; H. G. Kelley, Vice President; Frank Scott, Secretary-Treasurer; J. E. Dalrymple, R. S. Logan, J. A. Yates, and J. Sharpe.

Montreal and Province Line Ry.—This G.T.R. subsidiary company held its annual meeting in Montreal recently. The officers for the current year are: E. J. Chamberlin, Chairman; E. C. Smith, President; J. G. Smith, Vice President; Marcus Alexe, Secretary; W. H. Chaffee, Assistant Secretary and Treasurer; E. Deschenes, Auditor.

Temiscouata Ry. Gross earnings for June, \$24,535; operating expenses \$16,022; net earnings \$8,513, net earnings for 12 months ended June 30, \$40,761.

White Pass and Yukon Route.—Gross earnings from Jan. 1 to July 31, \$964,795, against \$789,821 for same period 1915.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alaska.—H. U. M. Higgins, a U. S. Government engineer connected with the building of the government railway from Anchorage to Fairbanks, Alaska, is reported to have said, in an interview: "While the Government is doing the more elaborate work, such as bridges, etc., the system is to let grading contracts for small sections of the line, to station men who are paid upon the engineers' reports. Thus the middleman is eliminated, and a small contractor gets the whole of his earnings without deductions. The system has been found to work very well, and gives general satisfaction. There is a great deal of heavy construction on the line owing to the physical conditions of the country, and it is estimated that four years will elapse before Fairbanks is reached. The difficulty of securing material so far remote from centres of population has become almost inconceivable, and only those who have been on the work can realize the problems which have been presented in assembling construction supplies. Eventually the transportation has to be taken out of the hands of the ordinary steamship lines plying to Alaska, and use made of the United States army transports."

Dominion Atlantic Ry.—We are officially advised that the new passenger station to be built at Middleton, N.S., is to be a frame building, 70 x 26½ ft. over all, of C.P.R. standard design. It will contain a general waiting room 18 x 25 ft., ladies' waiting room 16 x 25 ft., and baggage and express room 16 x 25 ft., with suitable lavatories and office accommodation. The freight shed is to be a C.P.R. standard wooden structure 60 x 30 ft. on concrete foundations. The contract has been let to J. H. Hicks & Sons, Bridgewater, N.S.

Dominion Government Railway to Hudson Bay.—We are officially advised that grading is progressing favorably on the last 40 miles to Port Nelson, Man., from mileage 285 to 425. Track laying has reached mileage 300, and it is expected it will reach Kettle Rapids, the second crossing of Nelson River, by Oct. 20. The track has received the first lift of ballast to mileage 280, and the telegraph line has been erected up to the same point. The putting in of the substructure for the bridge at Kettle Rapids will be started during October. The construction season now drawing to a close has been very wet and labor has been very scarce, both of which facts have impeded progress. J. W. Porter is Chief Engineer. The head office was removed from Winnipeg to Pas, Man., Sept. 1. (Sept., pg. 364.)

St. John and Quebec Ry.—There has been deposited with the Minister of Public Works at Ottawa, plan and description of the site of the proposed bridge across the Nerepis River, at Westfield, N.B., mileage 69.30, on the extension now under construction from Gagetown to Westfield. (Sept., pg. 364.)

Grand Trunk Pacific Ry.—We are officially advised that the grading for the extension of the line from St. Louis into Prince Albert, Sask., was completed some time ago. The work now to be done consists of track laying and ballasting, the building of stations and sidings, and the construction of terminal facilities at Prince Albert. These will include passenger station, freight house, locomotive house, loading platform, etc. The work is to start immediately and to be completed as fast as the labor market will

permit, which the company hopes will be this autumn. (Sept., pg. 364.)

Grand Trunk Ry.—We are officially advised that the work to be done in connection with the erection of the new car shops at Port Huron, Mich., involves the putting up of the following buildings:—Passenger car shops, composed of two buildings both 130 ft. wide x 250 and 310 ft. long, respectively, and both being served by a transfer table 60 ft. wide; 2 story cabinet shops 75 x 225 ft.; blacksmith shop 75 x 300 ft.; machine shop, 75 x 300 ft.; office building 42 x 88 ft.; store room 65 x 150 ft.; wood mill 100 x 200 ft.; lumber storage 75 x 130 ft.; dry kiln, 40 x 80 ft.; freight car shop 160 x 350 ft.; paint shop 25 x 50 ft. The buildings will be constructed principally of brick and concrete. The power plant is to be of modern construction equipped with boilers and generating plant for furnishing electric power. The machinery will be motor driven throughout and the plant will be modern in every respect. The approximate expenditure is \$700,000. (Sept., pg. 364.)

Great Northern Ry.—The City of Vancouver has issued a permit to the company to build a freight shed on the company's property at False Creek. The building is to be erected in close proximity to the new passenger station which is now well advanced, and is to be 600 x 50 ft. The estimated cost is \$25,000. The contractors are Grant, Smith and MacDonald.

The Board of Railway Commissioners has ordered the building of a permanent steel bridge across the North Road in Burnaby municipality, B.C., within a year. The bridge is to have a 24 ft. roadway with a 6 ft. sidewalk on either side. (Sept., pg. 364.)

Intercolonial Ry.—The Railways Department has declined to accept any of the tenders submitted for the erection of the station buildings in connection with the new ocean terminals under construction at Halifax, N.S. The reason given is that all the tenders were too high to justify the placing of a contract, but the tenderers justify their figures by the present high price of materials and the scarcity of labor. Other tenders for the work have not yet been invited.

In an address to the Rotarian Club of St. John, N.B., Aug. 31, Jas. MacGregor, who has resigned his position as Superintending Engineer, in order to go overseas with the Canadian Expeditionary Forces, spoke of the work being done and that while Halifax is pre-eminently the Canadian port on the Atlantic seaboard, there is ample trade for St. John as well. In carrying out the work Mr. MacGregor said the following quantities of material were required to be handled: Gravel and sand, 250,000 cubic yards; cement, 350,000 barrels; steel, 10,000 tons; granite, 2,000,000 cubic ft.; lumber, 5,000,000 ft. b.m.

F. P. Gutelius, General Manager, is reported to have said, Sept. 1, that with the close of navigation on the St. Lawrence River this season three additional berths would be ready at the Halifax ocean terminals, and three temporary sheds would be available.

F. P. Gutelius, General Manager, spent Sept. 1 in Halifax, and had a conference with the Mayor and the City Engineer in respect to a number of matters connected with the development of the port. The following statement was subsequent-

ly made by Mr. Gutelius: "We have settled with the Mayor and City Engineer all outstanding in connection with the closing of streets and exchange of property for the Halifax Ocean Terminals, and they anticipate that the tentative settlement will be approved by the Board of Control and the City Council at their next meeting, when the details of the entire transaction will be published. The settlement includes the dedication of the Flynn estate at the North West Arm for a hospital site and further than that the beaches on the Anderson estate and the Flynn estate will be dedicated to the public for recreation grounds, as the city may determine. With reference to the subway at the Three Mile House, at the solicitation of the Mayor and City Engineer the plans have been modified so as to improve the view of the subway on all approaches, and we are satisfied that when the work, as agreed on, is completed, the objections from automobile owners will be fully met. It is to be pointed out, however, that the speed of automobiles must always be limited when approaching subways located at a junction of highways."

The Railways Department has under consideration tenders for the construction of the foundations for a 500,000 bush. storage grain elevator, working house and track shed at St. John, N.B. (Sept., pg. 364.)

Kootenay and Alberta Ry.—The charter and assets of this projected railway were purchased by D. Redman, on behalf of the North American Collieries Co., on Sept. 7, for \$250,000. The amount of the reserve bid fixed by the court. The sale was made as a result of a foreclosure action against the company by the Alliance Investment Trust Co.

The K. & A. R. was incorporated by the Dominion Parliament in 1909, to build a railway from the C. P. R. Crownsnest Branch between Cowley and Pincher, Alta., through the Beaver Valley and the North Kootenay Pass to the International boundary in B.C., and through Pincher Creek and the Blood Indian Reserve, and the Milk River Valley to the International boundary near Coutts, Alta.

The charter was owned by interests associated with the Western Coal and Coke Co., Montreal, of which C. Fergie was manager. The coal company built a line of 13 miles from Pine Tree Harbor on the C.P.R. Crownsnest Pass Branch to the coal mine at Beaver Creek, Alta., in 1912, (Oct., 1912, pg. 501.)

The Maritime Ry. Power and Coal Co. proposes to open a new colliery near Maccan, N.S., and it is reported will build some additional lines and sidings in connection therewith. (Sept. 1910, pg. 727.)

The Nova Scotia Coal, Iron and Ry. Co.'s certificate of registration has been revoked by the Nova Scotia Government, the company having failed to pay registration fees due. The company was originally chartered to develop coal areas in the Broughton coal field, and a railway in connection therewith.

Pacific Great Eastern Ry.—Some work is being done on the extension of the line from Clinton to Prince George, B.C., for which funds were provided in a \$2,000,000 loan arranged by the British Columbia Government in London, Eng., at the end of July. Until this section of the line is completed nothing will be done in connection with the projected extension from Prince George to the B.C.-Alberta

boundary in the Peace River district where it is proposed to make connection with the Edmonton, Dunvegan & British Columbia Ry. (Sept., pg. 364.)

Pere Marquette Rd.—J. J. Corcoran, Superintendent Detroit-Canadian Division, and other officials were in Sarnia, Ont., Sept. 8, in conference with the Board of Trade respecting the building of a new station. The present station is inconveniently situated, particularly for passenger traffic, and is altogether inadequate for the traffic. It is suggested that the property at the end of the Christina St. pavement can be secured at a reasonable price. The Superintendent stated that it was proposed to build a modern station at an early date (Feb., pg. 49.)

Prince Albert District.—The Price Al-

bert, Sask., Board of Trade is getting a petition signed by farmers asking the Dominion and Provincial Governments to take steps to have a colonization railway built to open up the agricultural lands to the north of that place.

Vancouver Terminal Ry.—In connection with the proposals for the development of Vancouver, B.C., harbor, the Harbor Commissioners propose to build a terminal railway along False Creek, and have made application to the City Council for a right of way. At a conference of the representatives of Pacific Port authorities held at Vancouver, Sept. 5, a resolution was passed approving of the proposal for laying out a terminal railway there as a public work. (July, pg. 282.)

Freight and Passenger Traffic Notes.

The Lehigh Valley Rd.'s new passenger station in Buffalo, N.Y., was opened for traffic Aug. 29.

The C.P.R. has added to its Ontario Division the Camp Borden Subdivision, extending from Ypres, the point of connection with the Toronto-Sudbury line, to the camp, and including its lines at the camp, 4.5 miles.

The harvest excursions are estimated to have taken about 30,000 men into the prairie provinces; the C.P.R. carrying 18,000; the Canadian Northern Ry. 7,000; and the Grand Trunk Pacific Ry. 5,000.

The Canadian Northern Ry. put in operation on Sept. 11 a new direct train between Brandon, Man., and Moose Jaw, Sask. It leaves Brandon Mondays, Wednesdays and Fridays, returning Tuesdays, Thursdays and Saturdays.

The G.T.R. lake route special trains made their last trips for the season of 1916 as follows: Toronto to Sarnia Wharf, and Winnipeg to Fort William, Sept. 16; Sarnia Wharf to Toronto and Sarnia Wharf to Detroit, Sept. 17; Fort William to Winnipeg, Sept. 18.

A new mail and express train was put in operation, Sept. 4, by the G.T.R. between Toronto and Collingwood, reaching the latter place at 10.30 a.m. Under the service previously operated the mail was not received in Collingwood until mid-day.

The G.T.R. advertising department is having a number of moving picture films made of beauty spots on its line from Toronto, and over the G. T. Pacific Ry. to Prince Rupert. Arrangements are reported to have been made for exhibiting them in the United States to promote tourist traffic to Canada.

The G. T. Pacific Ry. on Sept. 4 put on a tri-weekly train service on its Cutknife Branch, which extends from Battleford to the boundary between Saskatchewan and Alberta, replacing the weekly service heretofore given. This gives a through tri-weekly service from Biggar, on the main line, to Battleford and Carruthers.

An association of transportation men on the Pacific Coast, covering Washington, U.S., and British Columbia, is being formed to effectively advertise the area for tourist purposes. A preliminary meeting was held at Seattle, Wash., Sept. 7, and a general meeting for organization purposes has been called to be held at Tacoma, Wash., Oct. 11.

The Canadian Northern Ry. is reported to have completed a survey of the pulpwood and other resources along its line

between Ottawa and Port Arthur, Ont. The survey estimates that there are over 8,000,000 cords of pulpwood, and 25,000,000 ties available mainly on the land within the area from which it can select the land grant given by the Province of Ontario in aid of the building of the line.

The G.T.R., commencing Sept. 24, rearranged its train leaving Montreal and connecting with the Delaware and Hudson Co.'s lines at Rouses Point, for points in New York State. The following is now the time of the trains leaving Montreal on this route: Daily for New York, 9 a.m. and 8.20 p.m.; while the times of arrival will be: 8.25 a.m. and 8.25 p.m. daily. All other trains running between Montreal and New York are cancelled.

The clauses in the U. S. emergency revenue bill to prohibit admission of Pacific Ocean halibut or salmon through a foreign country except in bond from a U. S. port were abandoned by Congress, Sept. 7. These clauses were aimed at the extraordinary development of the shipments of halibut, etc., from Prince Rupert, B.C., since the opening of the Grand Trunk Pacific Ry., and the consequent lessening of the halibut fishery trade into Seattle, Wash.

The Hamilton City Council is applying to the Board of Railway Commissioners for an order to compel the G.T.R. to provide an adequate train service between Hamilton and Burlington Beach. It was reported to the council that there was an agreement between the company and the city as to the number of trains to be run, and that no evidence could be found of an agreement between the G.T.R. and the Hamilton Radial Ry., by which the electric railway had the exclusive right to the passenger traffic between the city and the Beach.

The Grand Trunk Pacific Ry. announces that on all tickets reading between Portage la Prairie, Man., or points east thereof, and Edmonton, Alta., or points west thereof, a free side trip will be given from Melville, Sask., to Moose Jaw, Sask., and return. Passengers availing themselves of free side trip to Moose Jaw will not be permitted the privilege of free side trip to Yorkton or Canora. Similarly passengers availing themselves of free side trip to Yorkton or Canora will not be permitted the privilege of free side trip to Moose Jaw.

The G.T.R. has made radical changes in the dress and arrangement of schedules in its time table folders, the first series of the new folders being issued Sept. 10. The folder that has been re-

arranged to the greatest extent is that heretofore known as the Complete Timetables, which is now designated Form A. This contains the complete timetables of the system, with the exception of the suburban train service at Montreal and Chicago, and the motor car service over the International Bridge between Bridgeburg, Ont., and Black Rock, N.Y. The folder also contains a complete list of all stations on the system, and condensed timetables of the G. T. Pacific Ry., the G. T. Pacific steamship lines, and of the Central Vermont Ry. The other folders are as follows:—Form B, Ontario Lines; Form C, Eastern Lines; Form D, Montreal Suburban Lines; Form E (former Form A), Lines west of Detroit and St. Clair River; Form F, Chicago Suburban Lines; Form G, pocket time card, Buffalo Port Colborne and Dunnville; Form H, pocket time card, motor traffic International Bridge between Bridgeburg and Black Rock; Form J, Chicago condensed through time table; Form K, Highlands of Ontario.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,684,900	2,612,900	1,072,000	614,300
	\$7,519,100	\$5,249,700	\$2,269,400	\$1,325,300
Incr	\$3,573,800	\$2,248,500	\$1,325,300	

Approximate earnings for three weeks ended Sept. 21, \$2,102,900 against \$1,702,100 for same period, 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings
July	\$12,247,440.39	\$8,230,348.66	\$4,017,091.73
	\$12,247,440.39	\$8,230,348.66	\$4,017,091.73
Incr.	\$ 4,352,064.92	\$3,135,376.31	\$1,216,688.61

Approximate earnings for August, \$12,880,000 against \$8,414,000 for Aug. 1915, and for two weeks ended Sept. 14, \$5,407,000 against \$4,216,000 for same period 1915.

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., including the Canada Atlantic Ry., the G.T.W.R. and D.G.H. and M.R., for July, compared with those for July, 1915:—

Grand Trunk Railway.			
Gross earnings	\$1,170,000	
Expenses	2,920,800	
Net earnings	\$1,276,200	
Grand Trunk Western Railway.			
Gross earnings	\$ 831,250	
Expenses		
Net earnings	\$ 240,500	
Detroit, Grand Haven and Milwaukee Ry.			
Gross earnings	\$ 289,100	
Expenses		
Net earnings	\$ 54,300	
Traffic Receipts of the System.			
Aggregate from Jan. 1 to Aug. 31:—			
	1916	1915	
G. T. R.	
G. T. W. R.	6,269,093	4,788,364	1,480,729
D.G.H. & M.R.	2,210,795	1,720,902	489,893
Total	

Approximate earnings for August, \$5,750,376 against \$4,880,000 for Aug. 1915, and for two weeks ended Sept. 21, \$3,840,360 against \$3,188,108 for same period 1915.

Traffic Orders by Board of Railway Commissioners.

Distributing Tariffs from Manitoba Points.

25230. Aug. 1. Re application of Canadian Pacific, Canadian Northern and Grand Trunk Pacific Railway Companies for leave to revise the distributing or "town" tariff rates from Winnipeg, Portage la Prairie, and Brandon, Man., so as to conform to the basis laid down in the Board's judgment, dated April 6, 1914, as applicable from distributing centres in Saskatchewan and Alberta: Upon hearing the application at Winnipeg, June 12 and July 14, 1916, in the presence of counsel for and representatives of the applicant railway companies, the Winnipeg Board of Trade being represented at the hearing, no objection to the granting of the application being offered, and upon the recommendation of the Chief Traffic Officer of the Board, it is ordered that the application be granted.

Transfer Track at Basque.

25245. Aug. 3. Re application of the Canadian Northern Ry. for authority to construct a transfer track with the C.P.R. at Basque, B.C. It is ordered that the application be granted.

Brick Rates from Grand Piles.

25249. Aug. 3. Re complaint of Doucet & Freres, Grand Piles, Que., against freight rates on brick from Grand Piles to Yamachiche, and other points in the Province of Quebec, over the C.P.R. It is declared that the joint rate on brick from Grand Piles to Shawinigan Falls and Grand Mere, Que., on the Canadian Pacific and Canadian Northern Railways, should be $3\frac{1}{2}$ c; and it is ordered that the said railway companies be authorized to refund to the applicants $\frac{1}{2}$ c per 100 lb. on any shipments of brick to Shawinigan Falls and Grand Mere for which a charge of 4c has been made; and that the complaint with respect to rates to other points in the Province of Quebec be dismissed.

Heated Refrigerator Car Service.

25251. Aug. 5. Re the consideration of the question of extra charges proposed by carriers for heated refrigerator car service from points in Eastern Canada to points west of Fort William, Ont. Upon hearing the matter at Winnipeg, June 12, Saskatoon, June 14, Edmonton, June 15, Calgary, July 10, and Winnipeg, July 14, 1916, the Winnipeg and Saskatoon Boards of Trade, the Calgary Brewing Co., the Canadian Manufacturers' Association, the Prairie Provinces Branch of the Canadian Manufacturers' Association and the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railway Companies being represented; and upon the report of the Chief Traffic Officer of the Board: It is ordered that order 24994, May 22, 1916, suspending certain tariffs showing charges for the use of heated refrigerator cars, in so far as it affects the following railway tariffs, namely, Canadian Pacific C.R.C. 2156; Esquimalt & Nanaimo C.R.C. 327; Kettle Valley C.R.C. 83; Grand Trunk Pacific C.R.C. 158; Canadian Northern C.R.C. W-936, be rescinded; provided that sec. 3 of said tariffs shall apply only when loading is done by shippers, and that sec. 4 be eliminated.

Crushed Stone Rates from Hagersville.

25255. Aug. 11. Re application of the Hagersville Contracting Co., Ltd., and Hagersville Crushed Stone Co., against the proposed increase in freight rates on crushed stone from Hagersville to Windsor and Pelton, Ont., from 65c a ton to

85c a ton, as shown in Supplement 12 to Michigan Central Rd. Tariff C.R.C. 2490. It is ordered that the said increased rates on crushed stone be disallowed pending further order.

Grain and Lumber Stopped for Orders.

25285. Aug. 18. Re complaint of Montreal Board of Trade against track storage charge made by C.P.R. on lumber and forest products at Cartier, Ont., and against the same charge made by the G.T.R. at Sarnia, Ont. It is ordered that the G.T.R. be authorized to charge the following special tolls for detention of cars containing lumber and forest products at Sarnia, for more than 72 hours, while awaiting furtherance orders from the consignee thereof, viz., \$1 a car per day of 24 hours, or part thereof, for the first 2 days following the expiration of the 72 hours, and \$2 a car per day of 24 hours for each succeeding day or part thereof; the said tolls to be chargeable in addition to the ordinary demurrage toll, prescribed by General Order 1 (formerly order 906), Jan. 25, 1906, and the stop-over charge as fixed by order 6148, Jan. 21, 1909, as amended by order 10418, April 26, 1910; and it is further ordered that order 24436, Nov. 11, 1915, be amended so as to include lumber and forest products detained at Cartier, for orders.

Cleaning and Disinfecting Live Stock Cars.

25313. Aug. 17. Re complaint of Henry Miles of Point Fortune, against the unloading charge of \$1 a car at Hochelaga stock yards, and the charge of 75c a car for cleaning and disinfecting live stock cars, as assessed by the C.P.R.. Upon hearing the complaint at Montreal, June 28, 1916, in the presence of counsel for the C.P.R., no one appearing for the complainant, and upon the report of an inspector of the Board, it is order that the complaint be dismissed.

The Assistant Chief Commissioner, D'Arcy Scott, gave the following judgment: It is provided in the Live Stock Contract approved by the Board that stock shall be loaded and unloaded by the owner. In the present case the car was shipped to the East End stock yards, Montreal, where, owing to the nature of the yards and the volume of traffic handled it is impracticable for cattle to be unloaded by the owner. Consequently, the railway company has provided in Supplement 6 to C.R.C. no. E. 3041, a charge of \$1 car for unloading or loading cattle at the East End cattle market, Montreal. From the explanation given by the company at the hearing, it appears to me that it is justified in making this charge and I do not think the tariff should be interfered with. As far as the 75c for cleaning and disinfecting a car is concerned, that item is covered by the same supplement and was some time ago considered and approved by the Board.

Potatoes and Turnips from Maritime Provinces.

25322. Aug. 30. The application of Jones & Jones, of Woodstock, N.B., respecting shippers of potatoes in the Maritime Provinces for suspension of C.P.R. Tariff C.R.C. no. E-3176, and the Temiscouata Ry. Tariff C.R.C. no. 256, applying on potatoes and turnips from points in the Maritime Provinces to stations in Ontario and Quebec: Upon reading what has been filed on behalf of the applicants, it is ordered that the said tariffs be suspended, until further ordered.

C.P.R. Standard Mileage Freight Tariff.

25327. Aug. 20. Re application of C.P.R., under sec. 327 of the Railway Act, for approval of Supplement 1 to its Standard Mileage Freight Tariff, C.R.C. no. W-1948: Upon the recommendation of the Chief Traffic Officer of the Board, it is ordered that the said supplement be approved.

Export Rates on Iron and Steel.

25453. Sept. 22. Re application of Canadian Manufacturers' Association for suspension of proposed cancellation of rates on iron and steel articles from stations in Canada to Montreal, Quebec and the Atlantic seaports for export. Upon reading what has been submitted on behalf of the applicants, it is ordered that the proposed cancellation of special commodity rates on iron and steel articles from stations in Canada to St. Lawrence River and Atlantic ports for export, as contained in the following schedules, be suspended pending hearing on a date to be fixed by the Board. Grand Trunk Ry. Supplement 8 to tariff C.R.C. no. E-3351; supplement 34 to tariff C.R.C. no. E-3088; supplement 38 to tariff C.R.C. no. E-3089. Canadian Pacific Ry.—Supplement 25 to tariff C.R.C. no. E-2944; supplement 27 to tariff C.R.C. no. E-2946; supplement 10 to tariff C.R.C. no. E-3131. Toronto, Hamilton & Buffalo Ry.—Supplement 5 to tariff C.R.C. no. 1047; supplement 2 to tariff C.R.C. no. 1086; supplement 2 to tariff C.R.C. no. 1046; supplement 3 to tariff C.R.C. no. 1090. Canadian Northern Ry.—Supplement 10 to tariff C.R.C. no. E-624. Michigan Central Rd.—Supplement 3 to tariff C.R.C. no. 2521. Wabash Ry.—Supplement 4 to tariff C.R.C. no. 933. Pere Marquette Rd.—Supplement 4 to tariff C.R.C. no. 2007.

Endorsement Re Seed Grain Advances.

General Order 170. Aug. 5. Re general order 148, Sept. 1, 1915, authorizing companies within the legislative control of the Parliament of Canada and operating in Alberta and Saskatchewan, to endorse upon the bills of lading, approved under order no. 7562, July 15, 1909, the amount of advances for seed grain, fodder for animals and other goods furnished to persons in the said Provinces, and the interest agreed to be paid, authorized by chap. 20 of the acts, 1915, and as provided under order in council of July 23, 1915: Upon the report of the Governor in Council by Order in Council dated July 31, 1916, terminating on Sept. 1, 1916, the arrangement whereby the railway companies endorse indebtedness on bills of lading, it is ordered that the General Order 148, dated Sept. 1, 1915, be rescinded on and after Sept. 1, 1916.

I. R. C. Moncton Offices.—The Division Superintendent of the Intercolonial Ry. at Moncton, N.B., has removed his offices from the station building to the Rest House, and the Superintendent of Car Service has moved his offices from the station building to the Creighan Building, Main St. It has not been announced what will be done with the vacant offices at the station.

Railway Taxation in Montreal.—The City Recorder has fixed the valuation for taxation purposes of the C.P.R., the G.T.R., and the Canadian Northern Ry. tracks within the city at \$5,000 a mile. Then Board of Assessors put a valuation of \$6,000 a mile on the line in 1912, and the matter has been before the courts since.

Canadian Pacific Ry. Construction, Betterments, Etc.

The Montreal City Council has given notice that the bridge at Notre Dame St., which collapsed a short time ago when some freight trains collided must be replaced by a permanent structure of concrete and steel. The company claims that the bridge which was destroyed was of a permanent character, and can be rebuilt as it was before.

A Kingston, Ont., press report says C.P.R. officials are investigating the possibility of electrifying the company's line from Kingston to Renfrew, the power to be obtained from the Mississippi River. This is the old Kingston and Pembroke Ry., 103.4 miles.

The Manitoba Bridge and Iron Works started work, Sept. 5, on the erection of the platform roofs at Winnipeg. They will be of the umbrella type. The work is expected to be completed early in the autumn.

S. P. Dunham, President of the United Farmers of Alberta, was advised recently by Grant Hall, Vice President, and General Manager, Western Lines, that there were districts in the country wanting railway accommodation worse than the

to the harbor line, a distance of 812 ft. It will approximate 170 ft. in width, including a central portion of 140 ft. with a 15 ft. open space on either side. The Vancouver Province, referring to the work, says: "The gravel fill taken in the dredging operations between sheds 3 and 7 will be deposited in the centre and will come up to low water. Through this gravel fill there will be driven piles or concrete caissons down to hard bottom. The structure will be a 2 story one and all the latest contrivances will be used for the loading and unloading of vessels. The docks in the centre will be so arranged as to be capable of being depressed or lifted according to the state of the tide. There will be a bridge from Burrard viaduct on to the structure and to the second floor. The lower floor will be kept as free from teaming as possible and the upper floor will be used for local cargo. Elevators will be installed to work between the upper and lower floors. The upper floor will likely be constructed of solid construction steel. At low tide there will be 35 ft. of water at the outer edge of the pier and this will, it is be-

What Efficiency Testing Really Means.

By R. W. D. Harris, Trainmaster, C.P.R., Ignace, Ont.

In the mind of the progressive railway man efficiency is synonymous with safety, and the employee who looks at efficiency tests in their true light, welcomes them as a means of proving his worth, of showing him wherein lies his weakness or his strength. Efficiency tests are absolutely necessary, not only to ensure the proper performance of duty, but, as is primarily their mission, to check and safeguard the employee against his own possible mistakes, the greatest of which I can safely say is, "taking chances." Not a few of us know by experience how the mere fact that our work may become mechanical, the same day after day, makes a loophole for laxity to creep in, and then, indeed, are we in danger. No one can develop without the right test made in the right way and by the right person. By our failures we can attain to greater efficiency than by the way of untested efforts. Personally I have found the men, as a rule, ready and glad to take suggestions and instruction how to improve their work when failure has been the result of a test. They are beginning to see that it is not failure, but efficiency, that the officer is looking for, and that greater vigilance should be uppermost in their minds. Guided by an alert, clear brain, the hand is steadier, the eye keener, the ear quicker, and with pride in his work and the knowledge that his best is expected, ambition to excel is stimulated in the interested employee. I have noticed that occasionally an employee, notably a locomotive man, who is apparently all that can be desired in his particular line, becomes completely rattled when the unexpected happens, and in railway parlance "falls down," and too often for the reason that he has never been subjected to critical supervision and discriminating discipline. Such a man should be taken in hand and if possible educated, otherwise he may become one of those misfits in whose wake calamity follows sooner or later.

The sentiment in regard to surprise tests is changing, and the majority of the men are not only willing but anxious for the officer to see that they are on their job all the time. If tests could be the work of a special officer who would daily and hourly devote himself conscientiously and systematically to it there would not be the danger of continually repeating a test on the same employee, as sometimes happens through no fault of the one making the test, thereby engendering in the employee a feeling that the officer is hounding him and looking for failure. Such occurrences are unavoidable at times, for a test, to be genuine, must be unknown to the man who is tested and information sought as to his identity sometimes renders a test futile.

Efficiency testing should not be regarded as the work of a spotter, or spy, as I have frequently heard it stigmatized, but the judicious skilful work of a special officer through whom each and every employee shall receive sometimes much needed educating. What would be punishment to one man would not affect another in the same degree; all natures are not alike and a hard and fast rule for discipline is difficult to apply and attain the desired result. But if the men can be made to understand that the officers mean to put into practical application the golden rule, that right and justice are the paramount objects in discipline, then I believe that

Union Station, Quebec, built by Canadian Pacific Railway.

Canadian Railway and Marine World for September contained a description of the above mentioned new station, with an illustration made from the architect's drawing. The accompanying illustration is made from a photograph and shows the building as completed. As previously stated, it will also be used by the Canadian Government Railways for National Transcontinental Ry. train service.

district northeasterly of Kipp, Alta. The United Farmers asked for the immediate building of a line from Kipp, northeasterly for 25 miles. The route plans for this line were approved by the Minister of Railways, April 16, 1913, but nothing in the way of construction has been done. The organization proposes to appeal to the Dominion Government to see what can be done to have the line built.

Work on the completion of the Rogers Pass cut-off—which includes the tunnel, the name of which we are officially advised is to be the Connaught Tunnel—is being rapidly completed. The approach lines are practically finished, and the ventilating machinery is being installed. The tunnel, which is said to be 5 miles 5 ft. long, is expected to be opened for traffic early in November.

Tenders were received to Sept. 25 for building a jetty pier, in connection with the company's deep water terminals on Burrard Inlet, Vancouver, B.C. A description and plan of the site of the proposed jetty, has been deposited with the Department of Public Works, Ottawa. The pier is to be built between the present piers A and D, and will be known as Pier B. Like pier A it will go right out

lied, be sufficient to accommodate any size of vessel that may call at this port for many years to come." (Sept., pg. 361.)

Duty on Steel Rails.—Recent press reports from Ottawa have stated that on representations that Canadian railways could not secure steel rails in Canada, the mills being largely engaged in producing war material, the Government would probably suspend or reduce the customs duty on steel rails temporarily. An Ottawa press dispatch of Sept. 23 said the following announcement had been made officially: "It is understood that an arrangement has been made with regard to supplying rails required by the railway companies which will satisfy temporarily the urgent requirements of the various railway systems."

Canadian Northern Ry. Fishing Lodge.—The C.N.R. had in operation from about June 15 to Sept. 15, a fishing lodge which it built on the shore of Orient Bay, an arm of Lake Nipigon, Ont., with accommodation for about 20 guests. It was operated as an annex of the company's hotel at Port Arthur, Ont.

the majority of the employees will loyally co-operate in similar spirit and the business of the road be conducted on the plane of mutual helpfulness. It takes a friend to tell us our faults, and the efficiency officer should be able to so conduct his work that he will elevate his office and be regarded as the employees' friend in deed. Under such conditions efficiency tests will be the means of leading up to just what a railway stands for in practice as well as in theory—safety to the travelling public and to the employee, efficiency in its highest and best sense.

Railway Rolling Stock Notes.

The Canadian Northern Ry. has received 3 tourist cars, nos. 9408, 9411 and 9413 from Canadian Car and Foundry Co.

The National Steel Car Co., Hamilton, Ont., is reported to be making excellent progress with its order for freight cars for the French Government.

The 12 all-steel sleeping cars, which have been built recently, or are now being built for Canadian Government Railways, are to be named Levis, L'Islet, Louisburg, Lunenburg, Val Brilliant, Vancartier, Valley, Valois, Vernon, Ville Marie, Villeroi and Vivian.

Canadian Government Railways, between Aug. 16 and Sept. 18, received the following additions to rolling stock: 2 steel sleeping cars, from National Steel Car Co.; 13 vans from its Moncton shops, and 7 Pacific type locomotives from the Canadian Locomotive Co.

The Eastern Car Co. is reported to be negotiating for a contract for 4,000 cars for a foreign government, probably the Belgian. The first contract of 1,000 cars for the French State Railways has been completed, and it is expected that deliveries will commence in October of the remaining 3,000 cars on order for France.

Canadian Government Railways have ordered 20 all steel snow ploughs, for delivery by Dec. 1; 200 wooden box cars with steel draft arms, 30 tons capacity for delivery by Jan. 15, 1917, and 100 refrigerator cars with steel draft arms, 40 tons capacity, for delivery by Feb. 1, 1917, from Canadian Car and Foundry Co., and one 100 ton working crane from F. H. Hopkins & Co.

Following are some of the chief details of the 500 steel frame box cars which Canadian Government Railways have on order with Canadian Car and Foundry Co., as mentioned in a previous issue:

Length over striking plates 42 ft. 8½ in.
Length centre to centre of bolsters 31 ft.
Truck wheel base 5 ft. 6 ins.
Height from rail to top of running board 4 ft. ¼ in.
Length inside 40 ft. 6 ins.
Height inside 8 ft. 7 15/16 ins.
Door opening, width 6 ft.
Width over side sills 9 ft. 3 ins.
Width over all 9 ft. 9 ins.
Width over corner posts 9 ft. 9¾ ins.

The Eastern Car Co. has completed the first contract for 1,000 cars for the French Government, all of which have been delivered, and it expects to begin delivery in October on the second order from the French Government for 3,000 cars. Work is also beginning on 500 freight cars for the Canadian Government Railways. The company is negotiating for a contract to build 4,000 cars for another foreign Government, and if it is successful in securing this the works will be assured of orders to keep them employed for nine months of next year. Orders on hand are sufficient to keep the company busy throughout this year.

The Late Thomas J. Kennedy.

Thomas John Kennedy, one of the receivers and General Manager of the Algoma Central and Hudson Bay Ry., President and General Manager Algoma Eastern Ry., and Vice President and General Manager Trans-St. Marys Traction Co., died at Sault Ste. Marie, Ont., Aug. 29, of pernicious anaemia, after an illness lasting over three months. A funeral service, at which Archbishop Thorne officiated, was held at St. Luke's Cathedral, Sault Ste. Marie, of which he was one of the wardens for several years. During the holding of the funeral service, the operation of all trains and work on the A. C. & H. B. R. and Algoma Eastern Ry., and the system generally, was suspended for three minutes. The body was taken on his official car to his birthplace at Campbellford, Ont., where another service was held at The Home-stead, after which the burial took place

The late Thomas J. Kennedy.

in Christ Church cemetery. He leaves a widow and one daughter.

He was born at Campbellford, Ont., in 1854, and entered railway service in 1874 as chainman on the first C.P.R. survey east of Winnipeg, since when he was, consecutively, June 1877, assistant engineer on contract 15, C.P.R.; May 1880, engineer for Manning, Macdonald & Co., contractors for section B, C.P.R., at Rat Portage, Ont.; Oct. 1882 to the spring of 1885, Superintendent of Construction on the same section; June 1885, Roadmaster, White River section, C.P.R.; Aug. 1892, Superintendent, Chapeau District, C.P.R.; Sept. 1899, Superintendent, North Bay district, C.P.R.; June 1900 to Feb. 1911, General Superintendent, Algoma Central and Hudson Bay Ry., and Manitoulin and North Shore Ry., and from 1904 to Sept. 1910 also Manager, International Transit Co., Trans-St. Marys Traction Co., and the ferry line between Sault Ste. Marie, Ont., and Sault Ste. Marie, Mich.; Feb. 1911 to Oct. 1914, President, Superior Construction Co., Espanola, Ont., with contracts for the con-

struction of a section of the Manitoulin and North Shore Ry., now Algoma Eastern Ry., from Crean Hill to Whitefish; and subsequently for the northern section of the Algoma Central and Hudson Bay Ry. from Frank to Hearst. On a reorganization of several of the Lake Superior Corporation's subsidiary companies in 1914, he became, in October of that year, President and General Manager Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry., and Vice President and General Manager, International Transit Co. and Trans-St. Marys Traction Co. in charge of street railways and ferries. Toward the end of 1914 he visited England and conferred with bondholders and others financially interested in the A. C. & H. B. R., and in March, 1915, he was appointed one of the two joint receivers on behalf of the bondholders. From the outbreak of the war, he took a very active interest in local committee appointed for that purpose.

C.P.R. Directors' Inspection Trip.

Lord Shaughnessy, President, C.P.R., left Montreal by special train on Sept. 9, accompanied by three directors, Sir Herbert Holt, R. B. Angus and E. W. Beatty, K.C. At Toronto the following morning they were joined by two other directors, Sir Edmund Osler and W. D. Matthews and proceeded to Winnipeg, which was reached Sept. 12; another director, A. M. Nanton, of Winnipeg, joining the party there. Stops were made at several places west of Winnipeg. Vancouver was reached Sept. 15, and on the following day Lord Shaughnessy addressed the Vancouver Board of Trade. The party went by steamship to Victoria, Sept. 17, returning to Vancouver Sept. 18, whence their special train started on the eastward journey, Sept. 19, and the members arrived at their destinations, Sept. 26.

The party was accompanied by various general and local officials of the company through their respective territories.

Railway Lands Patented.—Letters patent were issued during August, in respect of Dominion Railway lands in Manitoba, Saskatchewan, Alberta, and British Columbia, as follows:

	Acres.
Calgary & Edmonton Ry.	791.00
Canadian Northern Ry.	620.00
Grand Trunk Pacific Branch Lines Co.	19.37
Kootenay Central Ry.	8.56
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	3,596.02
Total	5,034.95

The Grand Trunk Ry. Building, 17 to 19 Cockspur St., London, Eng., is reported to have been commandeered by the British Government. The G.T.R. will probably be allowed to retain the ground floor, but the office tenants will have to move out. It is said the offices will be used by the Department having charge of the manufacture, etc., of the new tank armored cars.

The Canadian Northern Ry. during the 12 months ended Aug. 31, handled over its lines between Lake Superior and the Rocky Mountains 109,122 cars of grain produced in its territory and inspected at Winnipeg, Calgary and other points in the west. This was an increase of 69,828 cars over the total of the previous year, and represented a gain of 178%.

Canadian Northern Ry. Collateral Trust Notes, which bear the Dominion Government's guarantee, are selling in New York to yield about 5.35%, or a little above the return on the war loan. They are secured by a general mortgage, the par value of the bonds being 133 1-8% of the note issue.

Mainly About Railway People Throughout Canada.

E. Tiffin, General Western Agent, Canadian Government Railways, and Mrs. Tiffin have taken quarters at the Carls-Rite Hotel, Toronto.

J. K. L. Ross, of Montreal, director C.P.R., has been appointed Chairman of the Pensions Board to deal with military pensions in the Dominion.

Mortimer M. McLaren has been appointed officer in charge of railway terminals at Camp Borden, Ont., with the temporary rank of major.

Lord and Lady Shaughnessy have announced the engagement of their daughter, Hon. Marguerite Shaughnessy, to E. L. Sanborn, of Havana, Cuba.

Lieut. H. G. Pepall, of the 48th Highlanders, who was wounded in action Sept. 7, is a son of G. Pepall, Assistant Foreign Freight Agent, G.T.R., Toronto.

W. R. MacInnes, Freight Traffic Manager, C.P.R., Montreal, has been elected a member of the Bank of British North America's advisory committee in Canada.

J. Murray Gibbon, General Publicity Agent, C.P.R., addressed the Calgary Ad. Club, Sept. 19, on immigration to Canada and the return of soldiers after the war.

Lieut. M. L. Duffie, of the Royal Engineers, who was on the C.P.R.'s London, Eng., staff, and was given a commission in March, 1915, has been wounded at the front.

R. W. Leonard, M.Can.Soc.C.E., formerly Chairman National Transcontinental Ry. Commission, has subscribed \$500 to the Lord Kitchener National Memorial Fund.

Mrs. Kerry, wife of J. G. G. Kerry, M.Sc., M. Can. Soc. C. E., of Kerry & Chace, Limited, engineers, Toronto, died there Sept. 5, aged 47. She was buried at Quebec, Que.

Sir William and Lady Mackenzie announce the engagement of their daughter, Miss Bertha, to Major J. F. H. McCarthy, 170th Battalion, Canadian Expeditionary Force.

F. P. Gutelius, General Manager, Canadian Government Railways, presented a silver cup for competition by I. R. C. employees at the city silver band sports at Moncton, N.B., Sept. 4.

Sir William Mackenzie, President, and **D. B. Hanna**, Third Vice President, Canadian Northern Ry., who left Toronto Aug. 24, for England, are expected back about the middle of October.

W. A. Duff, A.M.Can.Soc.C.E., Engineer of Bridges, Canadian Government Railways, Moncton, N.B., who has been suffering from blood poisoning at Halifax, N.S., has recovered and resumed his duties.

C. W. Van Buren, General Master Car Builder, C.P.R., Montreal, has been appointed a member of the standing committees on car wheels and car trucks, to report at the Master Car Builders' Association's 1917 convention.

James Coleman, Superintendent, Car Department, G.T.R., Montreal, has been appointed a member of the Master Car Builders' Association's standing committees on arbitration, and car trucks, to report at the 1917 convention.

C. H. Dancer, M.Can.Soc.C.E., who until recently was Deputy Minister and Chief Engineer, Manitoba Public Works Department, has been appointed District Engineer at Winnipeg for the Dominion Public Works Department.

Captain W. A. Casey, son of the late G. E. Casey, formerly M.P. for West Elgin, Ont., who was killed in action Sept. 8, was employed on the Grand Trunk Pacific Ry. during its construction in British Columbia and was first City Engineer of Prince Rupert.

W. C. Nixon has been elected President of the recently incorporated St. Louis-San Francisco Ry., which succeeds the St. Louis & San Francisco Rd. Since July, 1913, he has been chief operating officer and receiver of the old St. Louis and San Francisco.

Lord Shaughnessy, President, C.P.R., has been elected a trustee of the Mackay Companies, which owns the Commercial Cable Co. and the Postal Telegraph Co. Two other C.P.R. directors are also trustees, viz.: Sir Edmund Osler, Toronto, and Sir Thomas Skinner, London, Eng.

H. B. Muckleston, M. Can. Soc. C.E., Assistant Chief Engineer, Irrigation Branch, Natural Resources Department,

Sir Thomas Tait
Director General of National Service.

C.P.R., who has been located at Brooks, Alta., is now a captain in the 4th Pioneers Overseas Battalion, and is in Ottawa prior to going overseas.

Col. Fred Campbell, D.S.O., M.P. for North Ayrshire, Scotland, who died in London, Eng., Sept. 4, after a brief illness, was a son of the late Archibald Campbell, of Simcoe, Ont., and a grandson of the late F. W. Cumberland, at one time Managing Director of the old Northerly Ry. of Canada.

F. Rioux, Assistant to President, Reid Newfoundland Co., St. John's, Nfld., who went overseas in July as Second Lieutenant in the British Army Service Corps, has been transferred to the Royal Engineers Railway Operating Department, R.O.D., R.E. When last heard from he was at Longmoor Camp, Hampshire, Eng.

Lt. Col. C. N. Shanly, D.S.O., of the Canadian Army Pay Corps, who died in Toronto, Sept. 7, while on leave of absence from France on account of ill health, was the last surviving son of the late Frank Shanly, civil engineer, at one time City Engineer of Toronto, and one

of the builders of the Hoosac Tunnel in Massachusetts.

A. S. Goodeve, one of the members of the Board of Railway Commissioners, Ottawa, has been notified that his son, Lieut. A. E. Goodeve of the Princess Patricia's, has been killed by the bursting of a shell over the trench in which he was at the time. Two other sons are in the Canadian Expeditionary Forces and a daughter is nursing at Salonika.

J. MacGregor, Superintending Engineer, Halifax Ocean Terminals, Intercolonial Ry., was entertained to dinner at Halifax, N.S., recently, by a number of friends, and presented with regulation military binoculars by the Board of Trade, on leaving for camp preparatory to going overseas with the 239th Construction Battalion, in which he has a commission as a Major.

E. L. Brown, Vice President and General Manager of the Denver & Rio Grande Rd., has been elected President of the Minneapolis & St. Louis Rd., succeeding Newiman Erb, resigned. Mr. Brown is 52 years old and entered the railway service as a telegraph operator. For several years previous to 1912 he was an operating official of the Northern Pacific and Great Northern railways.

Joseph A. Panter, whose appointment as Trainmaster, C.P.R., Kenora, Ont., was announced in a previous issue, was born at Toronto, Nov. 18, 1877, and entered C.P.R. service, Aug. 28, 1898, since when he has been, to April 1904, brakeman, Toronto; April 1904 to June 1908, brakeman, Calgary, Alta.; June 1908 to Nov. 1915, freight conductor, Calgary, Alta.; Nov. 1915 to April 1916, Trainmaster, Calgary, Alta.

John Calvert Carruthers, who was appointed agent G.T.R., Canadian Express Co., and Great North Western Telegraph Co., Prescott, Ont., recently was born in Edwardsburgh Tp., Ont., Jan. 11, 1876, and prior to entering transportation service, was engaged from July 1892 to Sept. 1913, with the Prescott Emery Wheel Co., Prescott, Ont., and Williams & Wilson Ltd., Montreal, respectively; Sept. 1913 to Sept. 1915, clerk, Canadian Express Co., Prescott, Ont.; Sept. 1915, to April 1916, inservice of Westinghouse Church, Kerr Co.

John Roy Shaw, who has been appointed General Agent, Passenger Department, Canadian Pacific Ocean Services, Ltd., Shanghai, China, was born at Montreal, June 28, 1871, and entered transportation service in 1885; since when he has been, to 1891 clerk in Passenger Department, G.T.R., Montreal; 1891 to 1895, clerk in Passenger Department, C.P.R., Montreal; 1895 to 1898, clerk and ticket agent, C.P.R., Boston, Mass.; 1898 to 1904, Travelling Passenger Agent, C.P.R., Boston, Mass.; Feb. 1904 to June 1916, Passenger Agent, C.P.R., Yokohama, Japan, and Hong Kong, China.

Neil Mooney, who has been appointed Assistant General Passenger Agent, New York Central Rd., New York, entered railway service in 1884, as assistant ticket agent, West Shore Rd., Buffalo, N.Y., and was from 1886 to 1887, ticket agent, same road, Niagara Falls, N.Y.; 1887 to 1888, ticket agent, Harlem Division, N.Y.C.R., New York; in 1888 he was appointed City Passenger Agent, West Shore Rd., New York, and in 1892, General Western Passenger Agent, same road, Chicago, Ill., and from Jan. 1910 to

Aug. 31, 1916, he was General Agent, Passenger Department, N. Y. C. R., Montreal.

Edward James Worth, whose appointment as Chief Dispatcher, C.P.R., Ottawa, Ont., was announced in our last issue, was born at Toronto, July 29, 1887, and entered C.P.R. service April 5, 1905, since when he has been, to June, 1907, operator at various points, Ontario Division; June 1907 to March 1908, operator at various points, Western Lines; March to July 1908, operator at various points, Ontario Division; July 1908 to April 1914, dispatcher, London, Ont.; April 1914 to Jan. 1915, Train and Station Inspector, Toronto; Jan. to Nov. 1915, dispatcher, London, Ont.; Dec. 1, 1915, to Aug. 1916, car service agent, Atlantic Division, St. John, N.B.

Capt. L. C. Ord, formerly Assistant Master Car Builder, Eastern Lines, C.P.R., Montreal, who is about to leave England for France with the 165th Siege Battery, has appealed to his friends, including members of the Canadian Railway Club, for assistance in procuring comforts, such as collapsible stoves and utensils, etc., for the battery, stating that as it is made up of reinforcements and did not go as a unit from Canada it has no battalion funds provided from Canada, and that the provision of comforts therefore falls on the officers. Contributions may be sent to Jas. Powell, Secretary, Canadian Railway Club, Box 7, St. Lambert, near Montreal.

Albert Henry Kendall, who has been appointed Master Mechanic, Ontario Division, Toronto, was born at Aspatia, Cumberland, Eng., April 4, 1878, and entered railway service in June 1901, since when he has been, to Jan. 1904, locomotive foreman, C.P.R., Nakusp and Revelstoke, B.C.; Jan. to Nov. 1904, locomotive foreman, G.T.R., London, Ont.; Nov. 1906 to July 1913, gang foreman, erecting shop foreman, and general foreman, successively, Angus Shops, C.P.R., Montreal; July to Dec. 1913, locomotive inspector, C.P.R., Kingston, Ont.; Dec. 1913 to April 1915, general foreman, C.P.R., North Bay, Ont.; April 1915 to Aug. 28, 1916, Assistant Works Manager, Angus Locomotive Shops, C.P.R., Montreal.

J. T. Hallisey, who has been appointed Superintendent, District 6, Intercolonial Ry., Truro, N.S., and granted a short leave of absence, was born at Beaver Bank, N.S., Dec. 29, 1862, and entered I.R.C. service, Dec. 12, 1879, since when he has been, to April 1882, telegraph operator; April 1882 to Nov. 1890, dispatcher, Truro, N.S.; Nov. 1890 to April 1903, Chief Dispatcher, Sydney and Oxford District, New Glasgow, N.S.; April 1903 to June 4, 1908, Chief Dispatcher, Truro, N.S.; June 4 to Nov. 1908, acting District Superintendent, Halifax and St. John District; Nov. 1908 to Dec. 1912, Superintendent, Halifax and St. John District; Dec. 1912 to Aug. 31, 1916, Superintendent, District 3. He underwent an operation at his home recently and is reported to be progressing satisfactorily.

W. R. Fitzmaurice, who has been appointed Superintendent, District 2, Intercolonial Ry., Campbellton, N.B., was born at Bedford, N.S., March 19, 1870, and entered I.R.C. service May 21, 1886, since when he has been, to 1889, operator at various stations in Nova Scotia; 1889 to 1897, assistant agent, Springhill Jct., N.S.; 1897 to 1898, agent, Oxford Jct., N.S.; 1898 to Aug. 12, 1913, agent, Amherst, N.S.; Aug. 12, 1913 to Sept. 28, 1915, assistant Superintendent, Moncton-St. Flavie District, Newcastle, N.B.;

Sept. 28, to Nov. 1915, acting Superintendent, District 2, Campbellton, N.B.; Nov. 1915 to Aug. 31, 1916, Assistant Superintendent, Moncton-St. Flavie District, Newcastle, N.B.

G. A. Montgomery
Acting General Manager, Algoma Central and
Hudson Bay Railway and Algoma Eastern
Railway.

J. S. Byrom
General Superintendent, Sleeping, Dining and
Parlor Cars and News Department, Eastern
Lines, Canadian Pacific Railway.

W. Roberts Devenish, A.M.Can.Soc.C.E., who has been appointed Superintendent, District 3, Intercolonial Ry., Moncton, N.B., was born in County Tipperary, Ireland, Nov. 21, 1882, and entered transportation service in 1903, serving with the C.P.R. for eight years in various ca-

pacities in the Engineering and Maintenance of Way Departments, from rod man to Assistant Division Engineer, Lake Superior Division. He was appointed Division Engineer, Intercolonial Ry., Moncton, N.B., in Sept. 1913, and for a time prior to that he acted as Assistant Engineer with the National Transcontinental Ry. Investigation Commission. From Nov. 1915 to Aug. 31, 1916, he was Superintendent, District 2, I.R.C., Campbellton, N.B.

R. A. Pyne, who has been appointed Superintendent Motive Power and Car Department, Eastern Lines, C.P.R., Montreal, was born at Toronto, April 10, 1874, and entered C. P. R. service in July 1887, since when he has been to May 1893, apprentice, Winnipeg; May 1893 to Dec. 1898, fitter and lathe hand, and Dec. 1898 to July 1899, gang foreman there; July 1899 to March, shop foreman, Winnipeg roundhouse; March 1901 to July 1902, erecting shop foreman, Winnipeg repair shop; July 1902 to Jan. 1903, general foreman, Calgary, Alta.; Jan. 1903 to Oct. 1906, locomotive foreman, Brandon, Man.; Oct. 1906 to April 1909, District Master Mechanic, Moose Jaw, Sask.; April 1909 to March 1910, District Master Mechanic, Nelson, B.C.; March 1910 to Jan. 1912, Master Mechanic, Alberta Division, Calgary; Jan. 1912 to Aug. 31, 1916, Superintendent of Shops, Winnipeg.

The Railway Magazine, London, Eng., in referring to the departure from England of Wm. Phillips, who represented the Canadian Northern Ry. there from 1912, first as European Traffic Manager and afterwards as European Railway and Steamship Manager, says:—"During his residence in England he has made many friends both in business and social circles, who will greatly regret his departure. Shortly after the outbreak of war the company's steamships were taken over by the government, which involved important Admiralty work, and Mr. Phillips also took a prominent part in connection with the working agreement made between the Canadian Northern and the Cunard Line, to which company the Canadian Northern steamships were transferred. Prior to his departure Mr. Phillips received from the Lord Mayor of Bristol a letter conveying the best wishes of the business community, and another from Alderman H. W. Twiggs on behalf of the Bristol Docks Committee. He was also made the recipient of a number of presentations from his staff in England."

David Morice, who has retired from active service after 52 years with the G.T.R., was born at Brantford, Ont., Oct. 31, 1851, and entered G.T.R. service Sept. 4, 1864. He was from that date to 1868, messenger and clerk at Brantford, Ont.; 1868 to Oct. 10, 1870, chief clerk, Superintendent's office, Brantford, Ont.; Oct. 10, 1870 to April 1879, same position, Stratford, Ont., where the Superintendent's office had been moved; April 1879 to Aug. 1885, Freight and Passenger Agent, Stratford, Ont.; Aug. 3, 1885 to Nov. 1891, Agent, Niagara Falls, Ont.; Nov. 1891 to Nov. 1892, Assistant Superintendent, London, Ont.; Nov. 1892 to April 1896, Assistant Superintendent, Toronto; April 1896 to Aug. 1903, Terminal Superintendent, Toronto; and Aug. 3, 1903, to the date of his retirement, Sept. 8, 1916, Freight and Customs Agent, Niagara Falls, Ont. The condition of his health, as well as that of Mrs. Morice, make it necessary that they remove from Niagara Falls, and they will in future

live in Stratford, Ont. Prior to leaving Niagara Falls, he was presented with an address and a purse of money, by a number of associates in the G.T.R. freight department and other friends.

J. S. Byrom, who has been appointed General Superintendent, Sleeping, Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, was born at Jersey City, N.Y., Feb. 10, 1872, of British parentage, and on the death of his father six months after, he was taken to Scotland, where he was educated. At the age of 15 he went to sea before the mast and for two years sailed in ships of various rigs round the British coast. In 1889 he came to Halifax, N.S., on the Allan Line s.s. Sardinian, and entered the service of the Canadian Pacific Navigation Co., at Vancouver, B.C., serving as coal trimmer, sailor and steward, successively. From the autumn of 1890 to the spring of 1895, he served as assistant and chief steward on various Pacific steamships running out of San Francisco, after which he entered the Kootenay Lakes Navigation Co.'s service as steward, and remained in that service on the absorption of the company by the C.P.R. In 1901 he returned to the Pacific coast, the C.P.R. having acquired the Canadian Pacific Navigation Co. in the previous year, and was appointed shore steward and storekeeper, including a general supervision of all marine stores and labor of the C.P.R. British Columbia Coast Service, which position he retained until his appointment as Superintendent, Great Lakes Steamship Service, C.P.R., Port McNicoll, Ont., in May 1915.

G. A. Montgomery, who has been appointed acting General Manager for the Receivers, Algoma Central and Hudson Bay Ry., and acting General Manager, Algoma Eastern Ry., Sault Ste. Marie, Ont., following on the illness and death of T. J. Kennedy, one of the Receivers, referred to in another column, was born at Bradford, Ont., Feb. 11, 1871, and entered railway service, Sept. 1, 1886, since when he has been, to Sept. 1887, assistant to agent, Northern Ry., Newmarket, Ont.; Sept. 1887 to March 1889, agent, G.T.R., Powassan, Ont.; March 1889 to March 1890, freight clerk, C.P.R., North Bay, Ont.; March 1890 to June 1893, chief clerk, freight department, C.P.R., Sudbury, Ont.; June to Aug. 31, 1893, relieving agent, C.P.R., Lake Superior Division; Aug. 31, 1893 to June 1900, chief clerk to Superintendent, District 1, Lake Superior Division, C.P.R., North Bay, Ont.; June 1900 to Aug. 28, 1902, chief clerk to General Superintendent, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont.; Aug. 28, 1902 to Aug. 15, 1910, Superintendent, Algoma Eastern Ry., Sudbury, Ont.; Aug. 15, 1910 to Mar. 1, 1911, Superintendent, Algoma Central and Hudson Bay Ry., Michipicoten Harbor, Ont.; March 1, 1911 to Oct. 15, 1913, Superintendent, same road, Sault Ste. Marie, Ont.; Oct. 15, 1913, to the date of his present appointment, General Superintendent, same road and Algoma Eastern Ry., Sault Ste. Marie, Ont.

F. Walker, who was, until the early part of the present year, Superintendent, District 2, Alberta Division, Lethbridge, died at Tacoma, Wash., Sept. 7, after a long illness. He was born at Pontiac, Ill., Feb. 8, 1867, and entered railway service in 1883, as operator and served in that capacity until 1885, when he was appointed operator in the general offices, Oregon Rd. and Navigation Co., Portland, Ore., since when he had been, from 1888 to 1891, dispatcher, same company, Portland, Ore.; 1891 to 1893, chief

dispatcher, Union Pacific Rd., Butte, Mont.; from 1893 he was in private business for some years, and subsequently entered C.P.R. service as operator at Winnipeg, and acted as relieving dispatcher on the Western Division, being appointed dispatcher at Fort William, Ont., in 1900, and later, trainmaster at Rat Portage, Ont.; 1901 to April 1902, chief dispatcher and trainmaster, Cranbrook, B.C.; April 1902 to July 1908, chief dispatcher, North Bay, Ont., and at Nelson, B.C., consecutively; at various periods during 1908 and 1909 he was acting superintendent, District 3, Pacific Division, Nelson, B.C.; Sept. 1910 to June 1912, chief dispatcher, District 2, British Columbia Division, Vancouver; June 1912 to Sept. 1913, Car Service Agent, Manitoba Division, Winnipeg; Sept. to Nov. 1913, car service agent, Alberta Division, Calgary; Nov. 1913 he was appointed Superintendent, District 2, Alberta Division, Lethbridge, and towards the end of 1915, he was granted leave of absence on account of ill health, and finally relinquished the position in April 1916.

Sir Thomas Tait, who has been appointed Director General of National Service, in charge, under the Premier, of the adopted regulations recently for the co-ordination of the work of all agencies connected with recruiting, was born at Melbourne, Que., July 24, 1864, and entered railway service in September 1880. Since that date he has been, to July 1887, clerk in Audit Department, G.T.R.; July to Oct. 1881, clerk in office of Assistant to President, Chicago and Grand Trunk Ry.; Oct. 1881 to April 1882, clerk in Solicitor's office, G.T.R., Belleville, Ont.; April to Oct. 1882, clerk in General Manager's office, G.T.R.; Oct. 1882 to Sept. 1886, private secretary to Vice President and General Manager, C.P.R.; Sept. 1886 to May 23, 1887, clerk in General Traffic Manager's office, C.P.R.; May 23, 1887 to Feb. 1, 1889, Assistant Superintendent, Ontario and Quebec Division, C.P.R.; April C.P.R., Moose Jaw, Sask.; Feb. 1, 1889, to Mar. 12, 1890, Superintendent, Ontario Division, C.P.R., Toronto; Mar. 12, 1890, to Mar. 1, 1893, General Superintendent, Ontario and Quebec Division, C.P.R.; Mar. 1, 1893 to May 3, 1897, Assistant General Manager, C.P.R.; May 3, 1897, to April 1901, Manager, Eastern Lines, C.P.R.; April 1901 to Mar. 1903, Manager of Transportation, C.P.R.; April 1903 to Sept. 1910, Chairman of Victorian Railway Commissioners, Australia. On his resignation in 1910, he spent some time in travelling in India and Europe, and was knighted Jan. 1, 1911. On his return to Canada, he became interested in the Fredericton and Grand Lake Coal and Ry. Co., of which he is President.

Pacific Great Eastern Ry. Aid Bonds.—The British Columbia Minister of Finance was authorized at the B. C. Legislature's last session to raise \$10,000,000, and out of this to loan to the Pacific Great Eastern Ry. \$6,000,000 to aid in finishing its construction. \$2,000,000 of the Province's 4½% gold bonds, dated July 1, 1916, and due July 1, 1925, were sold through MacNeil & Young, Toronto, the issue price being 93½ and accrued interest, yielding practically 5.35%.

Elevator for Port Stanley.—The London Railway Commission, operating the London & Port Stanley Ry. has decided to secure data at once on the cost of a large grain elevator for Port Stanley, and if the reports are favorable the London ratepayers will be asked to vote \$100,000 for the purpose at the January elections.

Handrails Etc. for Locomotives and Fenders.

The following general order 171, passed by the Board of Railway Commissioners and dated Aug. 1, was issued Aug. 31: Re the question of hand rails and small foot rests on the outside of cabs of locomotives; and a railing on the tender to prevent men from slipping off when they are passing over the tender or when the locomotive is taking coal or water. Upon hearing the matter at Ottawa, May 4, 1915, in the presence of representatives of the Brotherhood of Locomotive Engineers, the Brotherhood of Firemen and Enginemen, the Grand Trunk, Canadian Pacific and Canadian Northern Railway Companies, and the New York Central, Rutland and Michigan Central Railroad Companies, and what was alleged, and reading the replies of the railway companies interested to supplement 1 to the Board's circular 142, July 6, 1915, and the report and recommendation of the Chief Operating Officer of the Board, it is ordered:

That the railway companies be directed to equip all locomotives of 100,000 lb. or over with handrails on the sides of cabs above the windows, near the top of the cab, and running the entire length of the same, the rails to have a clearance of 2 in. between the inner side of the rail and the outside wall of the cab, and to be securely fastened at each end, with a support in the centre; and that where the running boards do not project beyond the side of the cab an additional piece be added, to project not less than 1 in. from the side of the cab and running the full length of same.

That the tender of all such locomotives be equipped with a railing on both sides, on the top of the coping; such railing, if made of round bar iron or of iron pipe, to be not less than 1 in. in diameter, supported by three columns, one at each end and one in the centre, standing 8 in. from the top of the coping; the said rails to run the full length of the fuel storage well, or clear of the back coal wall on the tender; that on the space back of the coal wall, where the water man hole is located, the coping or railing project 8 in. above the top of the tank and run around both sides and back of the tank not less than 8 in. high, supported by columns to make it secure. That plans showing the proposed foot rests and the railing on tenders be filed for the Board's approval.

That the railway companies be permitted to operate locomotives used in international traffic, and merely passing through Canadian territory, equipped in accordance with the Interstate Commerce Commission's regulations. That this permission shall not extend to locomotives operated from or entirely within Canadian territory.

The English Channel Tunnel, which it is proposed to build between Dover, England, and Calais, France, is estimated to cost \$80,000,000. An estimated income shows, \$3,120,000 from passengers, \$4,000,000 from freight, \$325,000 for baggage and \$200,000 for postal service, annually, making a total revenue of \$7,645,000. Operating expenses are placed at \$2,000,000, the balance allowing over 7% on the estimated expenditure.

J. J. Hill's Fortune.—The state of Minnesota will receive approximately \$1,250,000 as an inheritance tax from the estate of the late J. J. Hill, railway builder and operator, whose Minnesota holdings were approximately \$40,000,000.

Royal Commission of Enquiry into Canadian Railway Situation.

Two of the commissioners, viz., A. H. Smith, President, New York Central Rd., and Sir Henry L. Drayton, Chief Railway Commissioner for Canada, have started work on their investigation, but the third commissioner, Sir George Paish, of London, Eng., will, we are officially advised, be prevented from acting owing to ill health. We are also advised that the appointment of a successor is under consideration by the Government and that pending the collection of a large amount of necessary information and statistics the successor will not be required to come to Canada. From this it would appear that the appointment is to be made outside Canada.

The commissioners have opened offices in the Royal Bank Building, Ottawa, where a staff is already at work. It has been impossible to obtain a list of appointments from the commissioners but it is said that most of the staff, at least the principal members have been brought in from the United States. G. F. Swain, Professor of Civil Engineering in Harvard University, and Chairman of the Boston Transit Commission, has been employed, and W. H. Chadbourne, also from the United States, and they are said to be engaged in valuation work. Archibald Buchanan, who is said to have been at one time in the New York Central Rd.'s motive power department and also on the Central Vermont Ry., is looking into the rolling stock and terminal facilities questions. He has already been over the Canadian Northern lines west to Edmonton, Alta., and will probably go over the Grand Trunk Pacific in the near future. A London press dispatch says that Chairman Smith has appointed George A. Assiter, son of Rev. G. F. Assiter, of that city, his personal representative in the matter and that Mr. Assiter has already undertaken "a nation-wide inspection trip." The employment of aliens has caused considerable criticism and the Canadian Society of Civil Engineers has issued the following circular to its members:

The council of the Canadian Society of Civil Engineers desires to call your attention to a matter of vital interest to the society, and requests your personal action in connection therewith for the benefit of the civil engineers of Canada. The Canadian Government appointed a Commission recently to advise upon certain phases of the railway situation of the country. It is understood that the government wishes to determine whether it should continue to assist private ownership as in the past by additional loans, or take over for itself the ownership and operation of certain railways, or allow them to go into receivership. The commission consists of A. H. Smith, President, New York Central Railroad; Sir Henry Drayton, Chairman of the Board of Railway Commissioners of Canada; and Sir George Paish, financier, London, England.

The above commission immediately appointed an American engineer as its advisor, and instructed him to organize a corps of engineers for valuation and advisory work. We wish to record our strong condemnation of the policy of placing in the hands of aliens the engineering work of a commission appointed by the Canadian Government to investigate Canadian railways for which the Canadian community has paid. The inferences to be drawn from the employ-

ment of aliens in the above connection are that the Federal Government considers: 1. That the Canadian engineers who built the railways are not competent to report upon them; 2, that the Canadian universities, in many cases enjoying government subsidies, are not producing competent engineers; and 3, that the Canadian Society of Civil Engineers, although embracing a membership of about 3,000, is not considered worthy of consultation on an important engineering question.

The above mentioned appointment of alien engineers is not by any means the first of its kind, as many similar but possibly less flagrant cases have preceded it, and it is not improbable that the recurrence of such appointments may be due to the fact that Canadian engineers neither assert themselves nor demand recognition. In order to impress upon the Federal Government the fact that one of its first duties is to encourage and develop the engineering profession in Canada in every possible way, the council has selected this gross violation of a vital principle to initiate a campaign and impress the fact that Canadian engineers must receive due consideration. The Canadian railways, canals, public works and other engineering attainments are a proof that Canadian engineers stand in the front rank, and it should be quite unnecessary for them to have to appeal to their own government for recognition.

It may be argued in support of the present alien appointment that Canadian engineers are not acceptable because many have been in the employ of the railway companies. To this we would reply that, as the commission itself is to advise the government, basing itself upon the engineering data given to it, any experienced engineers are competent to collect and submit the necessary information to the commission. It may also be argued that the government gave the commission a free hand in the appointment of an engineering staff, and, since this freedom of appointment is essential, our protest should be to the commission itself. To this we reply: 1, That when a particularly flagrant case arises such as this where competent constructing and operating engineers are passed over in favor of alien engineers, the question of the suitability of the commission appointed by the government for the work in hand comes into question; 2, A protest to the commission itself would probably prove futile, and, even if successful, would not in any way impress the government, the creator of commissions, in regard to future procedure in matters of this kind. The council of the Canadian Society of Civil Engineers, therefore, asks you to use your influence in every way to diffuse a knowledge of this matter throughout your community, and to place before those with whom you may come in contact the facts of the case and the position of engineers in relation thereto.

Sir Henry L. Drayton gave out the following reply in Ottawa, Sept. 12: "Professor Swain, of Harvard University, has had a varied experience in the valuation of railways, not only from the standpoint of the investor, but also from the standpoint of the government enquiry and valuation of the lines which have been followed for the past two years by the Interstate Commerce Commission in its task of making and fixing a valuation

of all the railways of the United States, a work as yet not undertaken in Canada. Prof. Swain's experience in this connection is unique. The instructions to the commission are that the investigation and report should be made at the earliest possible moment. In view of this it was essential that an engineer of the greatest experience in such matters should be employed. Prof. Swain has, therefore, been engaged, and with him W. H. Chadbourne, who has acted in past enquiries as office assistant for Prof. Swain, and who is familiar with the proper methods to be adopted and information to be obtained. He will, in this case, as in others, act as such office assistant, in so far as work in the field is concerned, and for all outside work or further assistance which may be required, the commission intends and always has intended, to employ Canadian engineers."

Chairman Smith went over a portion of the railways in the Maritime Provinces recently, and he and Sir Henry Drayton left Toronto Sept. 18, over the Canadian Northern Ry. by special train, which comprised their two official cars and two Canadian Northern official cars for Sir Donald Mann, Vice President, F. H. Phippen, K.C., General Counsel, and W. Phillips, formerly European Railway and Steamship Manager. M. H. MacLeod, General Manager and Chief Engineer, Western Lines, met them at Port Arthur. The intention when starting was to go over the Canadian Northern to Vancouver, by steamship to Prince Rupert, by Grand Trunk Pacific via Edmonton to Calgary, by Canadian Northern from Calgary to Camrose, by Grand Trunk Pacific to Winnipeg, by National Transcontinental to Quebec and by Canadian Northern from Quebec to Montreal, which it is expected will be reached about Oct. 8.

Subscriptions to Dominion War Loan.
—Among the largest subscribers to the Canadian War Loan issued recently are the following: Canadian Pacific Railway Co., \$2,500,000; The Mackay Companies, New York, \$2,000,000; Dominion Bridge Co., Montreal, \$1,000,000; Imperial Oil Co., Sarnia, Ont., \$1,000,000; J. K. L. Ross, director, C.P.R. Montreal, \$500,000; St. Lawrence Bridge Co., Montreal, \$500,000; Imperial Oil Co.'s Officials, \$485,000; Nova Scotia Steel & Coal Co., \$250,000; Sir Herbert Holt, director, C. P. R., Montreal, \$250,000; Canadian General Electric Co., Ltd., \$250,000; James Carruthers & Co., Limited, grain exporters, Montreal, \$100,000; James Carruthers, President, Canada Steamship Lines, Ltd., Montreal, \$100,000; J. W. Norcross, Vice President & Managing Director, Canada Steamship Lines, Montreal, \$100,000; Union Steamship Co., Vancouver, \$100,000; Dominion Steel Foundry Co., Hamilton, Ont., \$100,000; Montreal Warehousing Co., Ltd., Montreal, \$100,000; Elder Dempster & Co. Ltd., Montreal, \$100,000; Lord Shaughnessy, President, C.P.R., Montreal, \$100,000; Canadian Ingersoll-Rand Co., Montreal, \$100,000; Crossen Car Co., Cobourg, Ont., \$100,000; E. T. Galt, Montreal, formerly President, Alberta Ry. & Irrigation Co., \$50,000; W. G. Ross, President, Montreal Harbor Commission, and director Montreal Tramways Co., \$50,000; Structural Steel Co. Montreal, \$50,000; and Senator Curry, President, Canadian Car & Foundry Co. Montreal, \$25,000.

Grand Trunk Pacific Railway Annual Meeting.

At the G. T. P. R. Co.'s annual meeting in Montreal, Sept. 19, the President, E. J. Chamberlin presented the following statement: Construction work during the year consisted of ballasting, bridging and rip-rapping on existing lines, but no new work of any consequence was undertaken. To comply with the Board of Railway Commissioners' orders and to give access to industries, certain construction was necessary, and this, with the minimum maintenance required to keep the railway in good working condition, covers the construction work for the year. On the Prairie Section from Winnipeg to Wolf Creek, 916 miles, the work was almost entirely confined to maintenance and renewals, with the exception of a few sidings and spurs. On the Mountain Section, from Wolf Creek to Prince Rupert, 833 miles, there were a number of minor bridge renewals, some small bridges and culverts being constructed. Considerable ballasting was done on this section, as well as right of way fencing. One hundred thousand gallon steel water tanks and stand pipes were erected at Smithers and Endako, and the water supply in connection with them completed. Owing to amendments to the land titles acts in the western provinces it was found necessary to make re-surveys by provincial land surveyors of the right of way in Alberta and Saskatchewan. This has been in continuous progress during the past year and has been completed in Alberta.

The operation of the company's lines during the year showed substantial increase in both passenger and freight traffic. Prosperous conditions developed as a result of the enormous production in Western Canada, which were reflected in passenger receipts early in the present year, when business began to show substantial improvement. In connection with the company's steamships on the Pacific Coast, service was established between Prince Rupert and Alaska to meet the demand for transportation to that territory co-incident with the railway construction and development at present taking place there by the U. S. Government, the steamships being taxed, as a rule, to their carrying capacity. The increased business, however, was more marked with the freight traffic from the very large grain crop in the west last year. The preliminary reports of the present year's crop indicate that the grain traffic this year will exceed the volume from the next largest crop in 1913, and in view of the prosperous conditions of the agricultural communities and the towns dependent upon the prosperity of agriculture, making it possible for the people not only to provide for necessities but also luxuries to which they were not previously accustomed, the indications are that a good traffic in supplies, implements, vehicles, automobiles, etc., will continue for a number of months.

Owing to the establishment of the new service to Alaska, markets have been found for the sale of central British Columbia products along the company's line, including hay, potatoes and oats, and is encouraging increased production by the settlers in that section of the province. Agricultural settlement has not shown rapid progress in any part of Western Canada during the past two years. It has not been entirely arrested, however, as during the year a fair number of settlers from the U. S. have come

in, all of them, almost without exception, are well provided with money, implements and stock to ensure their success. Large settlement has taken place during the last two years in the Edson district and it is believed the company will receive a very considerable and constantly growing traffic from that section. During the year several hundred families have located in the Salmon River Valley and in the Nechaco Valley in the Prince George district. Fruit growing has been commenced in the Kitsumgallum and Lakelse valleys, tributary to the Skeena River, with very satisfactory results, and the development has been sufficient up to the present time to create substantial and prosperous towns. Mining is also going on in northern British Columbia, tributary to the company's line, and substantial traffic is being derived from this source, discoveries of new and valuable deposits being frequently made, many of which are being followed up with the necessary development.

The directors and officers elected for the current year are: President, E. J. Chamberlin; Vice President and General Manager, M. Donaldson; Vice President and General Counsel, W. H. Biggar; Vice Presidents, J. E. Dalrymple, Frank Scott; other directors, A. W. Smithers, Sir Henry M. Jackson, Sir Felix O. Schuster, Sir Arthur Yorke, London, Eng., W. Molson Macpherson, Quebec, J. B. Fraser, Ottawa, Hon. R. Dandurand, E. B. Green-shields, H. G. Kelley, W. H. Ardley, Montreal, Jules Hone, Quebec, Peter McAra, Regina, Sask., the three latter representing the Dominion Government. J. N. Booth, of Ottawa, declined re-election, owing to ill health. Secretary, H. Phillips; Comptroller, W. H. Ardley.

The annual meetings of the various G. T. P. R. subsidiary companies, including the Telegraph, Steamship and Branch Lines Companies were held on the same and following days. The directors and officers in these companies are composed of the directors and officers of the railway company.

Canadian Northern Railway Construction, Betterments, Etc.

A press report states that the company has ordered 15,000 tons of steel rails from the United States Steel Corporation.

Mount Royal Tunnel and Terminal Co.—There has been deposited with the Secretary of State at Ottawa copy of a trust deed dated July 16, made by this company to the British Empire Trust Co., securing an issue of debenture stock and bonds in respect of the company's tunnel and terminal at Montreal.

Before leaving for England recently Sir W. Mackenzie, President, arranged a \$1,750,000 loan in New York on C. N. R. terminal securities, to be used in completing the Mount Royal tunnel and building, a passenger station on Dorchester St., Montreal.

Canadian Northern Ontario Ry.—An order has been given Roberts & Schaefer Co., engineers and contractors, Chicago, to rebuild a frame constructed automatic coaling plant at Rideau Junction, Ont., which was destroyed by fire recently.

Canadian Northern Ry.—C. N. R. officials inspected the Rice Lake mineral district of Manitoba recently with, it is said, a view of ascertaining traffic possi-

bilities. The residents of the district suggested that the company build a branch from some convenient point on its Victoria Branch line to Fort Alexander, Man.

The section of the line from Warman to Humboldt, Sask., 65 miles, is reported as being relaid with heavier steel.

A press report credits the company with having laid track on 35 miles of lines west of Easton, Sask., graded 35 miles on the Duck Lake branch, south of Dumbane, Sask., graded 47 miles on the Thunderhill branch west of Preeceville, Sask., completed the grading of the Oliver-St. Metis line, Alta., to mileage 100, and laid 40 miles of track on the same.

The Saskatchewan Government has, it is reported, been informed by M. H. MacLeod, General Manager and Chief Engineer, that construction may be started this season on the projected line from Hanna, mileage 263 on the Saskatoon-Calgary line, southerly to Medicine Hat, Sask. The report adds that the contract for grading has been let to the Cowan Construction Co., Winnipeg. Another press report states that a contract is about to be let for the grading of a 60 mile line from Hanna, north westerly through Red Deer to connect with the Vegreville-Calgary line, and the line to the Brazeau River coal fields, Alta.

We are officially advised that it is the company's intention to build a bridge across the Red Deer River, so that its line from Warden to the Brazeau River district may be taken into the town of Red Deer, Alta. A large quantity of material for the bridge has already been delivered.

We are officially advised that the store building now being erected at Edmonton, Alta., is 86 ft. long, 48 ft. wide, and 27 ft. high from base of rail to eaves, and 2 stories high. It is being built on concrete foundations, the superstructure being of brick.

A press report states that the company has completed and will open for traffic during October, a branch line of 2.5 miles from Brule, mileage 2345 on the Transcontinental line, to the Brule Lake coal field, Alta.

Canadian Northern Pacific Ry.—We are officially advised that a start has been made on the construction of the Kamloops-Okanagan branch, by the putting on of some gangs on the rockwork at Vernon, B.C. A bridge across the North Thompson River to connect the main line with the town of Kamloops is reported to be under construction.

Tenders will be received up to Oct. 2, for the erection of freight offices and freight sheds at False Creek, Vancouver.

Press reports state that track laying on the line from Victoria to Patricia Bay, on Vancouver Island, is nearly completed, and that the line is expected to be put in operation within a short time. (Sept. pg. 361.)

Canadian Northern Equipment Trust Bonds.—The C.N.R. has placed in New York recently \$1,250,000 of equipment trust bonds the proceeds of which have been used in paying for rolling stock for the Duluth, Winnipeg & Pacific and other lines.

T. H. Holmes, heretofore agent, C.P.R. Telegraphs, Brandon, Man., has been appointed agent at Ottawa, Ont., vice O. A. Jorgenson, retired.

Agitations are being worked up in Toronto and London, Ont., for extensions of the free delivery limits for express companies in those cities.

The Canadian Pacific Railway's Roll of Honor.

C. H. Buell, Staff Registrar and Secretary Passenger Department, C.P.R., has issued list 11, which is prefaced as follows: "Several thousand officers and employes of this company enlisted for active military duty with the Canadian Expeditionary Forces, and the majority of them are now in Europe bravely battling for Canada and the Empire. As particulars of army reservists are not available, these lists of those who have given up their lives for their country or been wounded in action are necessarily incomplete, and do not therefore indicate fully the extent to which the company's officers and employes have participated in the great struggle." The list follows:—

The following casualty to a member of the company's European staff, on active service, has been reported: P. T. Roberts, clerk, London, Eng., wounded.

Bear, C. S.	Baggage porter	Medicine Hat	Wounded
Carden, C. C.	Apprentice	Angus	Wounded
Clandillon, Wm. P.	Clerk	Calgary	Wounded
Dargavel, Peter	Wiper	Fort William	Wounded
Davidson, C. H.	Car heater and iceman	St. John, N.B.	Killed in action
Delemont, Leonard	Car repairer	Winnipeg	Wounded
Frizzelle, R. K.	Operator	Lake Louise	Killed in action
Gilchrist, Charles	Night cleaner	Winnipeg	Suffering from shock
Hansen, A. C.	Clerk	Calgary	Wounded
Hume, H. T.	Trainman	B. C. Div'n	Killed in action
Johnson, Harry	Private car porter	North Bay	Wounded
MacAskill, P. M.	Trainman	Cranbrook	Suffering from shock
Malcolm, Sydney	Wiper	Macleod	Wounded (2nd time)
Parsisson, Harry	Storeman	Angus	Killed in action
Piton, H. H.	Brakeman	Lethbridge	Wounded
Porter, P. R.	Clerk	Guelph	Killed in action
Reynolds, E. C.	Freight porter	Carleton Place	Suffering from shock
Salway, H. H. R.	Sectionman	Neelby	Wounded
Sharp, E. J.	Inspector	Calgary	Wounded
Shufelt, C. R.	Loco. fireman	Farnham	Wounded
Sinclair, J. C.	Material man	West Toronto	Killed in action
Smith, G. F.	Loco. fireman	North Bay	Wounded
Smith, H. E.	Clerk	Vancouver	Wounded
Smith, L. C.	Transitman	Nelson	Previously reported missing, now officially declared dead
Tate, R. W.	Machinist	Ogden	Wounded
Vidal, Cyril	Clerk	North Bay	Wounded
Voyce, J. W.	Hostler	Lambton	Killed in action
Walsh, G. V.	Stenographer	Montreal	Wounded
Walsh, Mathew	Checker	Winnipeg	Wounded
Williams, H. J.	Fitter's helper	West Toronto	Killed in action
Woodworth, Frederick	Electrician's helper	Calgary	Killed in action
Young, Norris	Pumpman	Moose Jaw	Suffering from shock

List 12.

Ascott, Thos. H.	Car cleaner	Place Viger	Wounded
Barnett, John A.	Yard clerk	Fort William	Wounded
Barr, James	Record clerk	Montreal	Wounded
Barrowman, Robert	Wiper	Wynyard	Wounded
Biggs, Ralph P.	Wiper	Swift Current	Wounded
Blair, Frank A.	Clerk	Angus	Wounded
Condon, James F. B.	Clerk	Calgary	Killed in action
Craig, Robert A.	Apprentice	Angus	Suffering from shock
Cushing, Geo. B.	Brakeman	St. John, N.B.	Wounded
Davies, Allan B.	Brakeman	Lethbridge	Wounded
Doughty, Edward S.	Land Agent	Calgary	Suffering from shock
Ferguson, James	Blacksmith's helper	Angus	Wounded
Ferguson, John	Loco. fireman	Fort William	Wounded
Fitzgerald, John E.	Brakeman	B. C. Div.	Wounded
Forster, Gordon	Assistant agent	Stonewall	Wounded
Hallett, Clarence B.	Loco. fireman	Brandon	Wounded
Hamilton, John	Labourer	McAdam Jct.	Suffering from shock
Harrison, Roy S.	Loco. fireman	West Toronto	Wounded
Hopwood, Charles	Loco. fireman	Sutherland	Killed in action
Jones, W. Leslie	Wiper	Wynyard	Killed in action
Jones, W. Sydney	Trainman	Sherbrooke	Wounded
Kennedy, Thomas	Checker	Calgary	Wounded
Kerr, Geo. Donald	Brakeman	Cranbrook	Previously reported missing, now officially declared dead
Laing, W. Reid	Crew clerk	Moose Jaw	Wounded
Legg, Percy B.	Messenger	Winnipeg	Wounded
Leonard, Charles	Yardman	Ottawa	Wounded
McDonald, A. D.	Waiter	Montreal	Wounded
McKenzie, James	Porter	Fernie	Wounded
McSwan, Donald	Waiter	Fort William	Suffering from shock
Matthews, Ray	Car checker	Calgary	Died of wounds
Miedema, Peter	Waiter	Quebec	Wounded
Moran, Richard	General helper	Angus	Wounded
Mundy, Reginald E.	Drill boy	Angus	Suffering from shock
Nimmo, Robt. C.	Constable	Montreal	Killed in action
Nisbett, John	Stationary fireman	S. Ste. Marie	Wounded
Orr, Arthur C.	Register clerk	Calgary	Wounded
Oxborough, William	Draftsman	Calgary	Wounded
Parrott, Cecil L.	Clerk	Kenora	Wounded
Patience, George	Loco. fireman	Fort William	Suffering from shock
Payce, George	Painter	North Bay	Wounded

Proposed Joint Terminals Scheme for Fort William.

The Fort William, Ont., Board of Trade sent a communication to the Board of Grain Commissioners recently, asking for the establishment at the head of the lakes of adequate terminal facilities for handling grain. The matter was taken up by the Board July 17, when representatives of Fort William and Port Arthur were present and gave their views. In reply to the views expressed at the meeting, Grant Hall, Vice President and General Manager, Western Lines, C.P.R., has written the Board of Grain Commissioners, reviewing the whole situation and presenting the C.P.R.'s views in opposition to the suggestion for joint terminals to provide for the whole grain traffic at the head of the lakes. Mr. Hall says in part:—

"It must be self evident to the Board that the railway performing the road haul can give a much cheaper terminal service than an independent company whose operations are confined to this one movement. The terminal costs to the road haul railway are only an incident in its haul. To a terminal railway it is not only its whole office, but its whole source of revenue. The separate overhead expenses, separate and distinct expenses of organization, would necessarily enhance the terminal cost of the service. The suggestion is entirely impracticable. It is impossible to segregate grain traffic from the company's other activities, and turn over to a separate company working in the same terminals, the operation of the terminals for grain only. Therefore, the joint terminal company would have to perform all the terminal service on all the traffic, whether grain or otherwise. No railway would consent to an additional and separate assessment by another company in handling its terminals, or would consent to hand over its property for this purpose."

The question of the formation of a big terminal company separate from the railways is declared to be impracticable; and the formation of a joint terminal company by the different railway companies doing business at the two points is said not to be feasible, and in summing up Mr. Hall says:—"The C.P.R. has been at a large expenditure to create its extensive terminal tracks at the lake front on plans suited to the demands of its own traffic and the interests of its patrons. Its plans for the enlargement of the same are necessarily subject to its own interests. It cannot possibly consent to have its expenditures curtailed or enhanced, as the case might be, or its plans interfered with by the necessities of the traffic of other lines or the dictation of officers of the same. . . . The company finds no reason in the representations to your Board, either in its own interests or the interest of its patrons, for making any change in the manner in which its terminal facilities are now being operated."

The Shipping Federation of British Columbia has been incorporated under the Benevolent Societies Act, with office at Vancouver, generally to look after the interests of shippers and shipping companies in the province. The incorporators are: J. R. Stuart, Secretary-Treasurer, Marine Association of British Columbia; D. Baird, Local Manager, Victoria & Vancouver Stevedoring Co.; W. M. Crawford, Manager, Empire Stevedoring & Contracting Co., and T. W. B. Loudon, Manager, Balfour, Guthrie & Co.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Central & Hudson Bay Ry., Algoma Eastern Ry. G. A. MONTGOMERY, General Superintendent, who has been acting as General Manager for several months since the commencement of the illness of the late T. J. Kennedy, who was one of the receivers of the A. C. & H. B. R. and President of the A. E. R., is continuing in the same position pending a permanent appointment.

Canada Steamship Lines, Ltd.—J. A. GREINER has been appointed Mechanical Superintendent, vice R. Duguid resigned. Office, Montreal.

N. A. RULE, Assistant to Operating Manager, having left the service, the position has been temporarily abolished, and A. E. STINSON has been appointed dispatcher, Toronto.

Canadian Government Railways.—J. A. EVERELL has been appointed District Passenger Agent, Montreal, vice D. McDonald deceased. He will also retain his position as Superintendent, Montmorency Division, Quebec Ry. Light and Power Co., which division is to be taken over by the Dominion Government. (See also Intercolonial Ry.)

Canadian Northern Ry.—E. LABRECQUE, Soliciting Freight Agent, Quebec, Que., is reported to have been appointed City Freight Agent there, vice S. E. Leger, transferred.

S. E. LEGER, heretofore City Freight Agent, Quebec, Que., has been appointed City Freight Agent, Montreal, vice W. F. Barry, whose appointment as Commercial Agent, San Francisco, Cal., was announced in our last issue.

G. F. FOWLER, heretofore in the General Passenger Office, Toronto, has been appointed City Passenger Agent, Hamilton, Ont. This is a new position.

A. L. JOHNSTON, heretofore Travelling Passenger Agent, Winnipeg, has been appointed City Passenger Agent there, vice R. C. Curley transferred.

BARTLEY BROWN, heretofore chief rate clerk, Winnipeg, has been appointed Travelling Passenger Agent there, vice A. L. Johnston transferred.

M. J. DUPUIS has been appointed chief rate clerk, Winnipeg, vice Bartley Brown promoted.

R. F. McNAUGHTON, heretofore Travelling Passenger Agent, Edmonton, Alta., has been appointed City Ticket Agent, Regina, Sask., vice E. R. Cunningham, resigned.

R. C. CURLEY, heretofore City Passenger Agent, Winnipeg, has been appointed Travelling Passenger Agent, Edmonton, Alta., vice R. F. McNaughton, transferred.

J. S. PECK has been appointed City Ticket Agent, Edmonton, Alta., vice J. Madill, whose appointment as District Passenger Agent there, was announced in our last issue.

J. S. PECK, heretofore assistant ticket agent, has been appointed City Ticket Agent, Edmonton, Alta.

Canadian Pacific Ry.—R. A. PYNE, heretofore Superintendent of Shops, Winnipeg, has been appointed Superintendent Motive Power and Car Department, Eastern Lines, vice D. T. Main transferred. Office, Montreal.

N. R. DesBRISAY, heretofore chief clerk, Passenger Department, New York,

has been appointed District Passenger Agent, St. John, N.B., vice M. G. Murphy transferred.

C. J. KAVANAGH, heretofore Superintendent, District 4, Ontario Division,

W. R. Devenish
Superintendent, District 3, Intercolonial Railway.

A. H. Kendall
Master Mechanic, Ontario Division, Canadian Pacific Railway.

Toronto, has been appointed Superintendent, District 2 (Montreal Terminals), Eastern Division, vice J. M. Barrett resigned. Office, Montreal.

J. S. BYROM, heretofore Superinten-

dent, Great Lakes Steamers, C. P. R., Port McNicholl, Ont., has been appointed General Superintendent, Sleeping, Dining and Parlor Cars and News Service, Eastern Lines, vice A. Rutledge resigned. Office, Montreal.

THOMAS BATE, formerly at Calgary, Alta., has been appointed Assistant Works Manager, Angus Locomotive Shops, Montreal, vice A. H. Kendall, transferred.

E. A. NIX has been appointed acting Assistant Works Manager, Angus Car Shops, Montreal, vice T. C. Chown, assigned to other duties.

T. C. CHOWN, who has been acting as Assistant Works Manager, Angus Car Shops, Montreal, since the departure of L. C. ORD on active service overseas, has been appointed leading draughtsman, Mechanical Department, Montreal.

W. J. PICKRELL, heretofore Master Mechanic, Ontario Division, Toronto, has been appointed Assistant Superintendent, District 1, Eastern Division. Office, Farnham, Que.

M. G. MURPHY, heretofore District Passenger Agent, St. John, N.B., has been appointed General Agent, Passenger Department, Detroit, Mich., vice A. E. Edmonds, who is reported to have been appointed City Passenger Agent, or City Ticket Agent, there.

T. COLLINS, heretofore Superintendent, District 2, Ontario Division, London, has been appointed Superintendent, District 4, Ontario Division, vice C. J. Kavanagh, transferred to Montreal. Office, Toronto.

A. H. KENDALL, heretofore Assistant Works Manager, Angus Locomotive Shops, Montreal, has been appointed Master Mechanic, Ontario Division, vice W. J. Pickrell, transferred. Office, Toronto.

A. L. SMITH, heretofore Superintendent, District 1, Lake Superior Division, Sudbury, Ont., has been appointed Superintendent, District 2, Ontario Division, vice T. Collins transferred. Office, London.

D. T. MAIN, heretofore Superintendent of Motive Power and Car Department, Eastern Lines, Montreal, has been appointed Works Manager, Winnipeg, vice R. A. Pyne, Superintendent of Shops, transferred to Eastern Lines.

W. R. BOUCHER, heretofore Trainmaster, Assiniboia, Sask., has been appointed Superintendent, District 1, Lake Superior Division, vice A. L. Smith, transferred. Office, Sudbury, Ont.

W. M. ANSLEY, heretofore Trainmaster, Macleod, Alta., has been appointed Trainmaster, District 1, Saskatchewan Division, vice W. R. Boucher, promoted. Office, Assiniboia.

Grand Trunk Ry.—W. KEW, heretofore chief clerk, local freight department, Niagara Falls, Ont., has been appointed Freight and Customs Agent there, vice D. Morice, retired after 52 years service with the company.

J. C. L. NEWBY has been appointed chief clerk, Local Freight Department, Niagara Falls, Ont., vice W. Kew, promoted.

The following station agents have been appointed: St. Gregoire, Que., J. A. Landry; Vars, Que., J. Armstrong; Point Edward, Ont., A. Lickorish; Simcoe, Ont., E. G. Phillips; Algonquin Park, Ont., A. E. Needham.

Grand Trunk Pacific Ry.—The following station agents have been appointed: Lebret, Sask., L. Connolly; Mawer, Sask.,

F. X. Landry; Holden, Alta., T. F. Constantine; Mount Park, Alta., G. McMann.

Intercolonial Ry.—In consequence of the resignation of JAMES MacGREGOR, Superintending Engineer, Halifax Ocean Terminals, for military duties, A. C. BROWN, Resident Engineer in charge of the harbor works, will report to W. A. DUFF, Engineer of Bridges, Canadian Government Railways, Moncton, N.B., and H. H. SMITH, Resident Engineer in charge of railway construction, will report to C. B. BROWN, Chief Engineer, Canadian Government Railways, Moncton, N.B.

Districts 2 and 3 have been re-arranged, and District 6 has been created, as follows:

District 2, Mount Joli to Campbellton, Campbellton to Pacific Jct., not including Pacific Jct., Dalhousie Jct. to Dalhousie, Derby Jct. to Fredericton, Nelson Jct. to Loggieville, Campbellton to St. Leonards, and Gagetown to Centreville, 641.67 miles. W. R. FITZMAURICE, heretofore Assistant Superintendent, Moncton-St. Flavie District, Newcastle, N.B., has been appointed Superintendent, District 2, vice W. R. Devenish transferred. Office, Campbellton, N.B.

C. D. BOVARD, heretofore station agent, Moncton, N.B., has been appointed Assistant Superintendent, District 2, Campbellton, N.B. District 3, St. John to Moncton, Pacific Jct. to Truro, Pains Jct. to Point du Chene, and Sackville to Cape Tormentine, 271.17 miles.

W. R. DEVENISH, A.M.Can.Soc.C.E., heretofore Superintendent, District 2, Campbellton, N.B., has been appointed Superintendent, District 3, vice J. T. Hallisey, transferred. The office has been transferred from Truro, N.S., to Moncton, N.B.

District 6, Truro to Halifax, and Windsor Jct. to Stewart. J. T. HALLISEY, heretofore Superintendent, District 3, Truro, N.S., has been appointed Superintendent, District 6, and has been granted a short leave of absence, during which the jurisdiction of L. S. Brown, Superintendent, New Glasgow, N.S., is extended to include District 6. Office, Truro, N.S.

S. ALLANACH, heretofore Roadmaster, Fredericton Subdivision, Fredericton, N.B., has been appointed Roadmaster, Campbellton Subdivision. Office, Campbellton, N.B.

H. MORTON, heretofore chief clerk, General Manager's office, Canadian Government Railways, has been appointed Car Service Agent, I. R. C. Office, Moncton, N.B.

J. UNDERHILL, heretofore section foreman, Fredericton Subdivision, has been appointed acting Roadmaster, Fredericton Subdivision, vice S. Allanach, transferred. Office, Fredericton, N.B.

Michigan Central Rd.—H. SHEARER, heretofore Assistant General Superintendent, has been appointed General Superintendent, vice S. W. Brown. Office, Detroit, Mich.

W. H. O'KEEFE, heretofore Superintendent, Detroit Terminal and Toledo Division, Detroit, Mich., has been appointed Assistant General Superintendent, vice H. Shearer, promoted. Office, Detroit, Mich.

J. L. McKEE, heretofore Superintendent, Canada, St. Clair and Michigan Middle Divisions, St. Thomas, Ont., has been appointed Superintendent Terminals, Detroit, Mich., vice W. H. O'Keefe, promoted.

JAMES BALKWILL, heretofore Trainmaster, St. Thomas, Ont., has been appointed Division Superintendent there, vice J. L. McKee, promoted.

H. L. MARGETTS, heretofore Assistant Trainmaster, Niagara Falls, Ont., has been appointed Trainmaster with direct supervision over territory, Welland and east thereof. Office, Niagara Falls.

F. McELROY, heretofore General Yardmaster, Windsor, Ont., has been appointed Trainmaster with direct supervision over territory west of Welland, and also in charge of train crew assignments. Office, St. Thomas, Ont.

Office, St. Thomas, Ont.

New York Central Rd.—N. MOONEY, heretofore General Agent, Passenger Department, Montreal, has been appointed Assistant General Passenger Agent, New York. Office, 1216 Broadway.

A. L. MILLER has been appointed General Agent, Passenger Department, Montreal, vice Neil Mooney promoted.

Canadian Northern Railway System Annual Report.

The following report was issued recently over the signature of Sir Wm. Mackenzie, President:

Your directors in submitting the first report of The Canadian Northern Ry. System (and what otherwise would have been the 13th annual report of the Canadian Northern Ry.) for the year ended June 30, 1915, regret exceedingly having to do so at such a late date. There were, however, various reasons for the delay. A large number of head office and other employees have from time to time joined the Canadian Expeditionary Forces doing service for the Empire, and a great deal of the detail work incidental to the consolidation of the accounts of the various parts of the system had to be done by a limited staff. At present over 1,700 of your employees are attached to the service, and unhappily a number have already fallen on the several fields of battle. To the families of such employees your directors extend the sincerest sympathy, in the belief that in offering up their lives for their country's honor they have performed the highest service possible for men to do.

Another reason is that in carrying into effect the statute under which the consolidation of the companies forming part of the C. N. R. System was provided, reference to which was made in the previous annual report, an immense amount of preliminary work was necessary to co-ordinate the services and accounts of the different companies so that the best results might be attained. This statute required the preparation of a consolidated balance sheet, showing the financial position of all the companies comprised in the C. N. R. System. The financial statements submitted with the previous annual reports of the C. N. R. Co. itself, but in the financial statements submitted herewith are included the operations and accounts of the system as a whole covering the fiscal year ended June 30, 1915. In this connection your directors felt that this was an opportune time to introduce the practice of having the accounts audited by representative public chartered accountants. They, therefore, appointed Webb, Read, Hegan, Callingham & Co. to perform this service, and their certificate is attached to the consolidated balance sheet. The results of the operations of the system for the fiscal year, June 30, 1915, are as follows:

GROSS EARNINGS.	
Passenger traffic	\$5,41,224.37
Freight traffic	18,207,800.51
Express, mail, telegraph, interest and profits from elevators and other subsidiary companies, investments, etc.	2,293,081.41
	\$25,912,106.30
WORKING EXPENSES.	
Including taxes, etc.	\$19,288,814.42
Net earnings	\$6,623,291.88
Deduct:—	
Fixed charges	8,263,574.99
Net loss or deficit	\$1,640,283.11

The gross earnings of the system show a decrease of \$5,544,362.89, or 17.63%,

compared with the previous year's figures. The working expenses were 76.66% of the gross earnings of the system proper, and including taxes, 74.44% of the gross earnings from all sources, compared with 76.74% and 76.60% respectively last year.

As indicated in the report for the previous year Canada had commenced to feel the effect of a contraction in business. Real estate values and the building trades, were, as usual, the first to suffer, and carried in their wake subsidiary and dependent industries. In the throes of the trade depression came the war, the immediate effects of which were disastrous to the industrial life of the country. For weeks after the declaration of war business was practically at a standstill and the uncertainty of the future threatened to bring about a collapse of credit conditions. Faith in British power, supported by timely and generous encouragement from financial circles in London, averted disaster, and restored the country to a more normal condition, in which it regained confidence in its own inherent resources. To these troubles had been added a limited grain crop in the Western Provinces, and the C. N. R. with a large proportion of its mileage in the grain growing districts, suffered accordingly in the loss of such traffic.

It is a matter for sincere regret that notwithstanding the most rigid economy exercised in the operation of the companies' lines, the net earnings for the past year were insufficient to meet the fixed charges for the same period. It is perhaps unnecessary to say that this is the first occasion of its kind. Your directors feel, however, that having regard to the abnormal conditions which prevailed added to the fact that they exercised the closest supervision of the companies' revenues, they were able to avert even greater losses than those shown in the report.

Land sales during the year were 9,866 acres for \$158,272.40, an average of \$15.53 an acre, compared with \$15.23 for the preceding year. Land grant bonds of the issue of 1909, amounting to £122,700, or \$597,140, were retired, leaving in respect of this issue outstanding \$2,490,273.

Car trust obligations were created to the extent of \$2,000,000 for the purchase of cars of different kinds. During the year \$3,533,000.00 was repaid in respect of previous obligations, thus making a net decrease on this account for the year of \$1,533,000.00. The amount outstanding is now \$20,490,500.00, but inasmuch as the aggregate purchases of equipment amounted to \$56,761,448, it will be seen that very substantial repayments have been made on that account.

It has not been the practice in previous annual reports of the C. N. R. to incorporate in its accounts by way of an asset the value of unsold lands owned by the company. In view of the fact, however, that other subsidiary companies of our

The C.P.R. has been awarded a special gold medal for a display of toys suitable for home manufacture, and a special diploma for the excellence of its agricultural exhibit at the Quebec Provincial Exhibition, held recently.

The railways operating in Ontario complied with the Ontario License Board's request and discontinued selling intoxicating liquors on their trains after Sept. 16, when the Ontario Temperance Act went into force.

system had also unsold lands amongst their assets, your directors decided to place a valuation on such lands and to include the amount in the assets of the consolidated Balance Sheet. The amount therein shown is \$20,074,380.00, represented by the following acreage in the different provinces: Manitoba and Saskatchewan, 857,720 acres; Ontario, 2,000,000 acres; Quebec, 402,860 acres. The valuation is a most conservative one, and whilst producing the amount mentioned, the sales to settlers will materially add to the traffic returns of your system in due course.

Various short term issues of secured notes and temporary loans were made during the year, the proceeds of which have been or will be applied to construction work and for the general purposes of the company.

Prior to the opening of the Transcontinental line for public service it was felt by your directors that the time was opportune to extend an invitation to the members of the Senate and House of Commons of the Dominion and representatives of leading newspapers of Eastern Canada, Chicago and New York to be the company's guests on a trip across the continent. Seventy-eight members of the Senate and House of Commons and 34 journalists accepted the invitation. The trip occupied ten days, and both from members of parliament and journalists the company received congratulations. The members presented to the executive officials an address from which is submitted the following extract: "We had not conceived it possible that a railway, possessing the standard of alignment and gradient of your road could have been constructed across Canada within so short a period. The evenness of the roadbed and the facility with which one locomotive has hauled across the continent a train near one-quarter of a mile in length (consisting of 15 heavy coaches) fully demonstrates the high standard of construction obtaining throughout the line of travel."

The main line traverses the continent from tidewater on the Atlantic at Quebec, through the provinces of Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia, to tidewater on the Pacific at Vancouver and Victoria by car ferry, with branches gridironing the grain-growing prairie provinces of the west, and with trunk lines and branches serving the main industrial centres of the east. We have the advantage of access to ocean ports on the Atlantic and Pacific, as well as to the principal ports of the Great Lakes. Our future prosperity should be assured in proportion to the prosperity of the country. We will not realize our full earning power this year, or next year, but with continued improvement in the agrarian and industrial movements of the country we should continue to show steady increases in the traffic carried and revenues earned.

There has in the past been a real need for the company's lines in the economic development of Canada. There will be the same need in the future. These lines have been located with careful regard to the development of the maximum amount of traffic. With an efficient modern equipment and a roadbed of the highest physical standard it would appear that the success of the C. N. R. as a Canadian transcontinental system is assured.

Since the close of the fiscal year business conditions have substantially improved. The placing of large orders for munitions served to revive the industrial centres of Eastern Canada, and the ris-

ing prices of cereals, beef, pork products and cheese—Canada's principal export commodities—materially increased the purchasing powers of the farming communities of the nine provinces of the Dominion. The grain crop, too, of 1915, was the best in the history of the country, the value of farm products of all Canada exceeding that of any previous year by at least \$300,000,000.

With the completion of our transcontinental line from Quebec to Vancouver towards the end of 1915, a service was established which now gives to your company the advantage of the long haul on all traffic which had heretofore been enjoyed by other intermediate carriers. As indicating the cumulative effect of better trade conditions and the operation of your company's transcontinental service, the following comparative traffic figures for the last few months will perhaps more effectively show the situation:

	1916.	1915.	Increase.	Per cent. of increase.
March	\$2,607,000	\$1,898,500	\$ 708,500	38%
April	2,824,300	1,948,900	875,400	44%
May	3,088,900	1,721,400	1,367,500	79%
June	3,377,200	1,779,600	1,697,600	90%

Port Arthur's Connection With National Transcontinental Ry.

Port Arthur, Ont., people are looking forward to the time when National Transcontinental Ry. trains will be passing through their city, and be given a connection with the main line east. A correspondent of one of the local papers wrote recently as follows:—"In order to reach the east from Fort William over its present lines, government railway trains have to travel back to Superior Jct., which is half way to Winnipeg. Then they have to travel as far east again by the main line before they are as near the east as when they started from Fort William. That is, they have travelled more than 350 miles before making any progress. It costs money to move trains too. The solution is to connect the Canadian Northern with the government railway at Long Lake, northeast of Nipigon, where the two roads are only 35 miles apart. Then, by running over the Canadian Northern to Long Lake the government road could save the 350 miles of useless and expensive haul from Fort William to Superior Jct. and back east to a point opposite Fort William."

Grain Inspection at Western Points.

The following figures compiled by the Department of Trade and Commerce, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division for August, and for 11 months ended August 31, with a comparison of the number of cars inspected for 11 months ended August 31, 1915.

The Timiskaming & Northern Ontario Ry. Commission has removed its head office to the Imperial Oil Building, 56 Church St., Toronto, from 25 Toronto St.

The British Government is reported to have ordered 45 narrow gauge locomotives, from the Baldwin Locomotive Works, Philadelphia, Pa.

The Falling of the Suspended Span of the Quebec Bridge.

The regrettable accident by which the suspended span of the Quebec bridge fell and was lost in the St. Lawrence River on Sept 11 has been so fully described in general terms by the daily press that it would be superfluous for us to devote space to the general details and incidents. We shall therefore confine ourselves to its technical features. Before doing so, however, we wish to emphasize the one great outstanding feature of the calamity—the admirable pluck of the contractors

lies a wreck on the bed of the St. Lawrence. Until the instant of failure the remarkably worked out programme was successful in every particular. The floating out from the erection site, the placement ready for hoisting, the connection of the truss to its lifting mechanism, the releasing from the scows, seven or eight cycles in the jacking operations—all had been performed in accordance with schedule. Then when the hosts of spectators were congratulating the engineers over

north half of the west truss robbed the mass of its diagonal support of the instant previous and allowed the north shoe of the east truss to drop back with considerable impact upon its stirrup, causing the north half of this truss, doubtless already weakened, to crumple. An instant later the southeast lifting girder tore its way free from the structure, already turning upstream, or west, and partly in the water. At this moment, apparently, both north corners still rested

Designs for Quebec Bridge, for the first one which failed in 1907, and for the second one now being built.

whose monetary loss has been so great. Instead of there being any quibbling or attempt to avoid responsibility, as occurred some years ago when one of the cantilever arms of the first bridge collapsed, the contractors at once assumed the whole responsibility and declared their intention to build another span and complete the bridge. As is generally known, the contracting company, the St. Lawrence Bridge Co., is a combination of the Dominion Bridge Co. and the Canadian

success of their work, when most of the responsible men, confident of the overcoming of all difficulties, were relaxing from the strain which so serious an operation imposed, the huge structure, without warning, slipped from its supports and in a flash disappeared in the river. The failure occurred at 10.50 a.m., 89 minutes after the barges had floated free and lifting had begun.

The sequence of failure was probably as follows: The southwest corner of the

in their stirrups. Which of these left its seat first the evidence does not yet clearly indicate, but whichever did, snapped first the mooring lines (none of which had been cast off) exerting the greatest pull on the east corner of the mooring truss, breaking in the instant previous the east set of heavy falls attached to the lower corner of the mooring truss and to the lower chord of the cantilever. This movement severely stressed this truss, warping it permanently while it

Quebec Bridge—Anchor and cantilever arms ready to receive suspended span and as they now are.

Bridge Co., the chief officials being Phelps Johnson, M.Can.Soc.C.E., President, and G. H. Duggan, M.Can.Soc.C.E., Chief Engineer. Their pluck and courage have been magnificent all through. They have the warm sympathy of the Canadian people as a whole and their best wishes for a successful consummation of the colossal work.

The suspended span of the Quebec Bridge while being hoisted to position on Sept. 11 fell from its hangers and now

span slipped out of its supporting stirrup, throwing the weight of the structure on the southeast and northwest corners. The lateral system and sway bracing developed sufficient resistance under shear to crumple the west truss in the centre of its north half. At the same time, or just previous, the top chord of the south half of this west truss pulled apart from its own weight. Simultaneously, probably, the unsupported north half of the east truss also pulled apart, or began to do so. The failure of the

was still held by the west set of falls. By this time the north pair of hangers had undoubtedly been kicked far back, so that when the last corner of the suspended span let go it was under or even north of the mooring truss. The two lines from this corner must have swung the mooring truss north, letting it go as they snapped, so that it fell back and broke its west set of falls by its own weight. Some 12 lives, all those of workmen, were lost in the failure.

This account of what happened after

everything in the unprecedented operation of raising this 5,100-ton span of nickel had gone so smoothly that most of the distinguished engineers present had left for lunch, is based on testimony of eyewitnesses, photographs and conditions after the accident, the information hav-

tion with remarkable precision and in very short time. The hanging links of the lifting mechanism had been completely attached by 8.35, and in about 40 minutes jacking operations were started, which raised the span sufficiently for the last group of barges to float clear by

blocking on the outer end of the top chord rested a universal rocker bearing composed of a base casting bearing a pin parallel to the axis of the bridge, an intermediate casting resting on the first pin and bearing a pin at right angles to it, and a top casting resting upon the

Quebec Bridge—Suspended span erected on shore at Sillery Cove, prior to placing on scows for floating into position.

ing been gathered by two representatives of the Engineering Record, who were at the site. This evidence will be presented in detail below, but for its understanding a brief review of the method employed and of the operations under way at the time is necessary. This method, which was most unusually successful in every detail up to the moment of the collapse, is fully described further on in this issue.

The span in lifting condition was completely erected at Sillery Cove, 3 miles below the site, except the floor system, of which only the floor beams and such of the centre and end panel stringers as were needed to support the hoists and platforms required during erection were in place. Beneath each end, securely fastened together, was placed a group of three specially built steel frame barges, which were blocked from the span with the remaining floor steel. Valves in these scows were closed on the rising tide at midnight between Sept. 10 and 11, and

Centre Span, Quebec Bridge, in process of being hoisted, after the withdrawal of the scows on which it was floated into position.

Falling of Centre Span, Quebec Bridge.

(Copyrighted in Canada and Great Britain by Chesterfield & McLaren.)

the span floated at 3.53 a.m., the barges drawing 8 ft. 2 in. of water. The span started to swing out into the river at 4.40 a.m., and by 5.12 a.m., when the last line to shore was cut, was in complete control of the tugs. It reached the bridge site at 6.55 a.m. and was moored in posi-

9.30 a.m. At this point breakfast was served to the men, and jacking operations were not resumed until a few minutes before the accident.

Taking one corner of one cantilever arm as a unit, the lifting mechanism may be briefly described as follows: First, on

second pin and directly supporting a short, heavy box girder. From this girder on each side of the chord hung heavy steel plate links supporting a second girder at approximately the level of the track. Both of these girders were fixed with reference to the raising of the span,

and did not change relative position during lifting operations. On the lower girder rested a pair of hydraulic jacks tested to a capacity of 1,250 tons apiece. Upon these jacks was carried a third and movable box girder similar to the first pair. Passing through diaphragms in the movable and in the lower fixed girder on each side of the truss were suspender links in 30-ft. lengths having pin holes on 6-ft. centres and extending down to the level at which the centre span was floated in. After this span was moored in place, the lower ends of these suspender chains were pinned to stub links at the corners of the suspended span. Each pair of these stub links in turn supported a fourth box girder similar to the other three upon which rested a corner of the span. The support at this point was identical with that above the top chord of the cantilever arm, and provided, by means of three castings and two pins at right angles to each other, for movement of the suspended span in any direction, due to wind pressure, without putting any bending stresses on the hangers and their connections.

At the time the span came to a bearing on these hangers, pins were inserted through the diaphragm holes of the movable girders resting on the jacks and through holes at the top of the suspender links. The jacks were at the bottom of their stroke. To raise the span, two hydraulic pumps on each cantilever arm were started, supplying pressure at 4,000 lb. per square inch to the jacks through a system of control valves which made it possible to regulate the relative movement of the corners and ends of the span very accurately. When the jacks had reached the top of their 2 ft. stroke, pins were inserted through the diaphragms of the lower fixed girders and through a lower hole in the links, thus releasing the jacks, permitting the withdrawal of the upper pins and the lowering of the movable girder for the next stroke. During the upward stroke, the movement of the hydraulic jacks was closely followed by two counterweighted screw jacks at each corner, to provide against dropping the load through any accident to the hydraulic piping. Three complete jacking cycles, the first requiring 15, the second 12, and the third 10 minutes, were completed to release the scows before work was stopped for breakfast. After work was resumed, three or four more cycles were completed and the span was held by pins in the fixed lower girders while the jacks and the upper movable girders, when, without warning, the span slid out of the hangers and plunged into the river.

That the southwest corner left its hanger first is indicated by the testimony of eyewitnesses, one of whom went down with the span, several of whom were in boats in the vicinity and looking at the span at the time and several of whom were on the banks of the river observing the span through field glasses. The testimony is confirmed by the fact that the southwest hanger remained comparatively still, while the other three hangers were violently agitated, and swung back and forth, with a movement having components transverse to and longitudinal with the bridge, for some time. This would indicate that the southwest hanger was not affected by the subsequent movements of the span before it plunged into the river, while the other three were. It is further confirmed by the positive evidence from the very remarkable photograph which shows this corner beneath the water at a time when the other three corners were still above the level of

the supports. This photograph also confirms the testimony of eyewitnesses that the span turned over toward the west in disappearing.

That the span broke up in the manner indicated by reason of the fact that it was supported for a short space of time on the southeast and the northwest corners is evidenced by eyewitnesses who saw: 1. A parting of the top chord of the west truss at the second panel from the south end. 2. A crumpling of the top chord of the west truss at the north end. 3. A pulling apart of the eye-bars in the bottom chord of the east truss at the north end.

All of these statements are confirmed by the photograph of the plunging span published herewith. They are further confirmed by the fact that the southeast and the northwest hangers sustained more damage than the other two, and that the platforms on the jacks at the top of these hangers were more completely broken up by swinging than those around the other two. The violence with which the southeast hanger tore loose from the southeast corner of the truss is evidenced by the fact that its westerly suspender bar was considerably stretched and that this is the only hanger in which the girders were thrown to any extent out of level. Also the lower pin, half of which remained in place on this hanger, was broken in two. The hanger diagonally opposite also showed some inclination, though slight, with the horizontal.

The remaining deductions, regarding the manner in which the east lower corner of the north mooring truss became warped and the blocks by which this truss was pulled out of the way while the span was being placed were broken loose, are borne out by the testimony of eyewitnesses to the fact that the truss swung violently to and fro, as did the hangers on this arm, and by the warping of the truss and the breaking loose of the falls.

So far as could be observed, without going minutely over the main trusses, no damage of any sort was sustained by them. The normal camber of the cantilever and anchor arms before taking the weight of the suspended span was visible to the eye at certain points on the structure and appeared to be unchanged after the accident from the condition obtaining on the Sunday previous. There is no testimony of any pieces of steel or rivet heads having sheared off and fallen. Locomotive cranes were operated on the structure out to the end of the cantilever arms on the afternoon of the accident without producing any motion or vibration not discernible during the preceding week—all this, in spite of the fact that for a short time during the collapse of the centre span the west truss of the north cantilever and the east truss of the south cantilever must have been under at least 100% greater load from the span than they were designed to carry. The strength of the hanger mechanism is fully attested by the fact that all four hangers are intact, as may be seen in the photographs. The fact that the inner suspender bars of each hanger are bent near the bottom is accounted for by the detail of the lower connection. A heavy box girder connected the lower ends of the inclined posts of the trusses of the suspended span, and the inner links of the suspender chains came up through the inside of this girder. It was necessary for them to tear it apart before the span could break free from the hangers. The fact that at least the calculated friction was developed by the longitudinal

pins in the shoes under the corners of the span is well attested by the manner in which the last three corners hung on until the span had broken apart.

It is not possible to suppose that the southwest stirrup could have been pulled out from under the span in any manner, both because of the fact that such a great friction was developed on the other pins because a close inspection of the mooring lines had been made a few minutes prior to the accident and because the upward motion of the span was at the time loosening instead of tightening these lines. The photographs also prove conclusively that the members of the truss itself could not have failed and thus caused the slipping out of this shoe, as the truss continued to hang on at both ends after its members had actually come apart. For these reasons the Engineering Record is led to suspect the failure of the intermediate cast steel supporting shoe as the primary cause of the loss of the span.

Burrard Inlet Tunnel & Bridge Co.

The annual meeting of the shareholders of the Burrard Inlet Tunnel and Bridge Co., consisting of representatives of the various municipalities surrounding the Inlet, was held at North Vancouver, B.C., Sept. 13. The retiring President, F. L. Carter-Cotton, was not present, and had not sent in a report. The shareholders decided to ask for one, and arranged to hold an adjourned meeting to receive it on Nov. 8.

A report of the Auditors on the company's financial standing at June 30, showed a balance on hand of \$3,062.25. The expenditure for surveys, organization, engineering, borings at site of proposed bridge, etc., to June 30, included \$3,478.27, which was expended during the year 1915-16. The company is capitalized at \$3,000,000 of which shares to the value of \$764,500 have been issued, and on which \$118,000 has been paid up.

Following are the officers, etc., for the current year: President, Mayor McBeath, Vancouver; Vice President, Reeve Bridgeman, North Vancouver; Finance Committee: Alderman Foreman, Reeve Hay, with the President and Vice President; Construction Committee: Alderman Woodside, Mayor Haynes (North Vancouver), Councillors Loutet and McClurg, acting Secretary, J. F. Collings.

Canadian Freight Association, Western Lines.

At the annual meeting in Winnipeg, recently, the following officers and standing committees were elected for the current year:—

President, W. C. Bowles, G.F.A., C.P.R., Winnipeg; Vice President, W. G. Manders, G.F.A., Canadian Northern Ry., Winnipeg.

Executive Committee: W. C. Bowles, A. E. Rosevear and W. G. Manders.

Inspection Committee: G. H. Smith, F. R. Porter, P. H. Burnham and J. M. Horn.

Car Service Committee: J. P. Driscoll, E. D. Cotterell, T. P. White, W. B. Harris, and G. P. Clarke.

Weighing Committee: W. C. Bowles, O. C. Walker, W. G. Manders, J. P. Driscoll, A. E. Rosevear and F. R. Porter.

Classification Committee: W. B. Lanigan, W. P. Hinton, G. Stephen, A. E. Rosevear, W. C. Bowles, W. G. Manders and F. R. Porter.

The Method Adopted for Hoisting the Centre Span, Quebec Bridge.

In view of the failure to hoist the centre or suspended span of the Quebec Bridge, the method adopted is of the greatest interest. The following description of it was written shortly before the attempted hoisting, by A. J. Meyers, Chief Draughtsman of the Board of Engineers in charge of construction.

The span is 640 ft. long, 88 ft. wide and weighs, in floating in condition, about

sequent stresses in the sway and lateral bracing. The inequality of pressure is proportional to the horizontal cross section of the loaded scows near the surface of the water. To reduce wave effect as much as possible, long, narrow scows with a deep draft would preferably be used. With the design of scow adopted the oscillation of the span from wave action produces only stresses in the sway

the transverse and longitudinal centre lines of the scows, or a load of 1,075 tons uniformly distributed over a length of 50 ft. at each end of the scow and symmetrically placed about its centre lines. These two conditions of loading give the largest stresses in the web members of the three longitudinal trusses. The largest stresses in the chords of these trusses are caused by a loading of 280 tons uni-

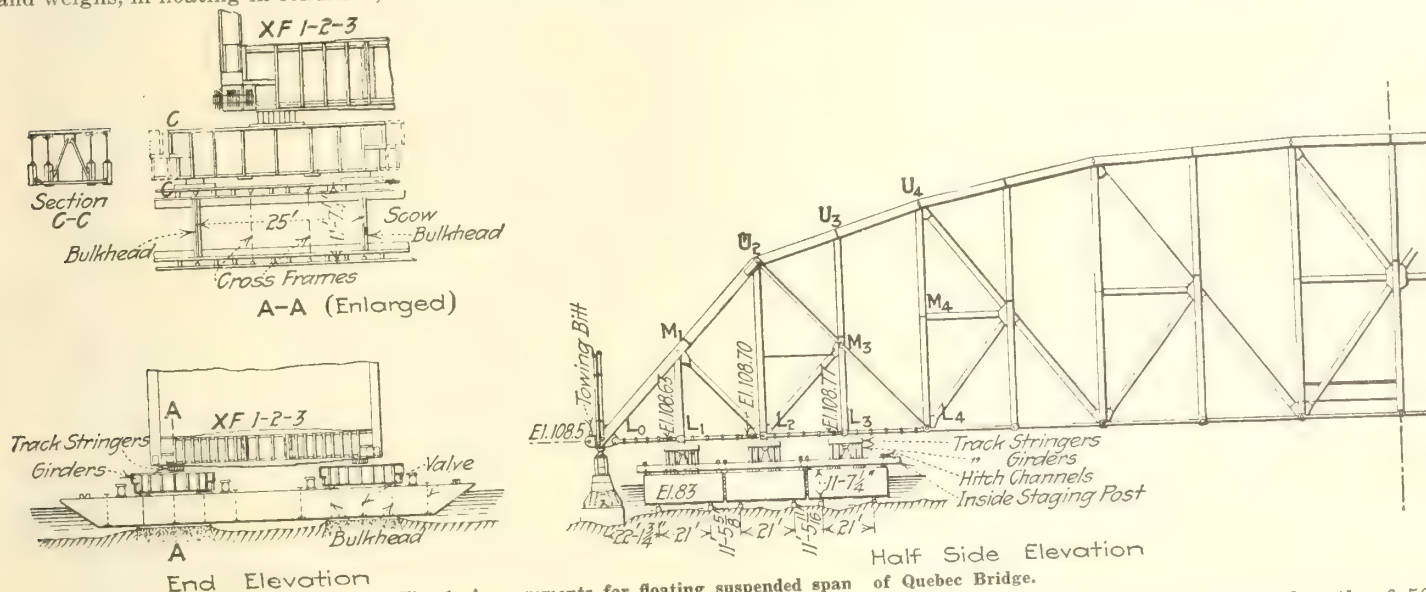

Fig. 1. Arrangements for floating suspended span of Quebec Bridge.

5,000 tons. It was erected at Sillery, about 3 miles below the bridge site, over the shallow waters of Victoria Cove. During erection it was supported on staging under each panel point; afterward the intermediate supports were removed. As shown in fig. 1, the suspended span, after it had been completely assembled and riveted up, rested on the end staging bents at L0 and L18. The scows for floating the span to the main bridge site, about 3 miles up the river, were floated into the positions shown in the diagram under panel points L1, L2, L3, L15, L16 and L17, and as the tide lowered they came to a bearing on their concrete and

and lateral bracing, which these systems are well able to resist. The scows as built are 32 ft. 5½ in. wide, 164½ ft. long and 11 ft. 7½ in. draft over bilge timbers. Each has a steel frame made up of three longitudinal trusses, spaced 10½ ft. c. to c. and braced transversely by 4 watertight steel bulkheads with intermediate crossframes between the bulkheads, spaced 8 ft. 4 in. c. to c. No special longitudinal bracing in the horizontal planes is provided, as the 11½ x 5½ in. cross timbers, spaced 2 ft. 9 in. c. to c., are bolted directly to the steel framework of the scow; and the 4-in. timber covering is spiked to these cross-

formly distributed over a length of 50 ft. on either side of, but immediately adjacent to, the transverse centre line of

Fig. 3. Lines from centre span to mooring trusses.

the scow, or a load of 180 tons uniformly distributed over a length of 50 ft. at the centre of the scow and symmetrically

Fig. 2. General scheme for hoisting suspended span, Quebec Bridge.

timber beds. In the bottom of these scows valves are provided which were opened and will be left open until the span is to be floated, so that the scows and the span will not be disturbed by the daily rise and fall of the tide.

The design of the scows was governed by the arrangement and requirements of loading and the possible condition of the surface of the river during floating-in operations; also so that they might have some commercial value after their work of floating in the suspended span was completed. The average length from crest to crest of wave at the bridge site is about 40 ft.; the wave height is 4 ft. This unevenness of the surface of the river produces unequal upward pressures at the four corners of the span and con-

timbers with 8 x 7/16 in. boat spikes, three at each intersection, providing an efficient resistance to any transverse or longitudinal horizontal shearing and bending forces that may arise.

The load of the suspended span is transferred to the bulkheads by means of the cross-girders and I-beams shown in fig. 1. The bulkheads transfer this load to the longitudinal trusses, which distribute it over the length of the scows. In addition to the scows being designed to carry the load of the suspended span, in order that they may be used for freight carrying purposes after their work of floating in the span is completed, they are built to carry a load of 1,400 tons uniformly distributed over a length of 123 ft. and systematically placed about

placed about its centre lines.

It was assumed that the weight of the scow itself produced no stresses in the longitudinal scow trusses and that the total superimposed load was carried equally by these three trusses. In calculating the maximum bending stresses in the chords of these trusses a co-efficient of 0.75 was used to allow for continuity over the panel points. The allowable unit stresses provided for a safe unit stress in these trusses with the suspended span carried on four instead of six scows. The scows are placed under the suspended span and shimmed against the bottom flanges of the floor beams. To make sure of favorable weather conditions while the span is floating, it should be lifted from its supports at L0 and L18

only immediately before its journey to the bridge site. In order to prevent the lifting of the span by the scows when the weather conditions are not favorable, there are a number of 8-in. disc bottom valves in each scow, and these are left open. The elevations of the beds of the scows were so chosen that the scows will be emptied through these bottom valves during the last low tide before the beginning the journey to the site of the main span. The valves have a total area of one five-thousandth the clear area of the scows. All interior areas of the scows are given unobstructed access to some one of the valves, and it is esti-

cars.) The total load carried by one scow under these conditions is 970 tons, distributed over four bulkheads. The draft of the unloaded scow is $1\frac{1}{2}$ ft. and when carrying the load of 970 tons the draft is 8 ft. 2 in. The stresses in the truss members of the span while it is being supported entirely by the scows are such that a tension connection had to be provided at the joint U2; and the bottom-chord eye-bars between the panel points L0-L4 and L14-L18 had to be stiffened temporarily, as indicated in fig. 1, with longitudinal timbers and transverse blocking and bolts. The sub-tension verticals and the sub-compression diagonals

stresses arising from the action of a 4 ft. wave.

Just before the span is lifted off the supports at L0 and L18 the load is nearly all taken by the scows, and the span could be easily displaced from its position by the current and wind, unless it is anchored against their combined effect. It is desirable to prevent this shifting off before the actual moment of starting arrives, inasmuch as it may happen that after deciding to raise the span preparatory to moving out, a change in the weather conditions may make it desirable not to proceed on the journey and the span would have to be returned again to

Fig. 4. Detail of arrangements for mooring and hoisting suspended span, Quebec Bridge.

ated that the water will drain out practically as fast as the tide falls.

As illustrated in fig. 1, the load of the suspended span is transferred from the floor-beams at each of the panel points L1, L2, L3, L15, L16 and L17 to the bulkheads of the scows by means of eight 24-in. 80-lb. I-beam track stringers, with their end-connection angles interlocked at the ends, and four track girders braced together by swaying frames and top laterals. These I-beam stringers and track girders are part of the permanent floor material of the span—all the floor steel and the railway track floor, except the main floor beams, being left off the span during the operation of floating-in and hoisting. (This floor material will be placed afterward by means of derrick

directly over the scows had also to be specially designed and stiffened to take reversal of stress while floating the span.

The three scows at each end of the span are braced and connected together as shown in fig. 1, by using the inside staging posts from the framework of the anchor arm as continuous connecting girders. Four of these posts are used for each set of three scows and are spaced 42 ft. c. to c. These posts were connected to the scows by means of a pair of cross channels, pin connected to vertical angles which were in turn bolted to the transverse bracing frames of the scows. Wedges were driven between the posts and the scow decks. These connections and the connecting girders were calculated to resist the bending and shearing

its bearings on the staging bents, to await the next favorable opportunity for making a trial. To keep the span in its position until the final decision to float away has been made, timber bents will be placed between the points L0 and L18 and the adjacent scows and also bents on the shore side of the span, against which the scows will guide themselves as the span is raised or lowered on its supports.

The bottoms of the scows are placed at El. 83, where they rest on bearing timbers. The bed of the river over which the scows must pass will be cleared off to El. 82. The draft of the loaded scows will be 8 ft. 2 in. In order to float the span, a high tide elevation of at least 92 ft. will be required, and in order to

drain the scows at the previous low tide an elevation of low tide of not more than 82 ft. would be expected. Inasmuch as elevations of high and low tide, as calculated from the tide tables, may vary at the erection site of the span plus or minus $2\frac{1}{2}$ ft., in order to be sure of floating off, a tide must be chosen whose elevation, as given by the tide tables, will correspond to a high-tide elevation of 94.5 ft. and a low-tide elevation of 79.5 ft., giving a range of tide of 15 ft.

Four or five days in succession, when the elevations and range of tide would be

Service at Toronto. These statements will be telephoned at about 11 a.m. and 11 p.m. respectively, with a prediction of the possible wind velocity. By barometric observations at the bridge site it can be estimated whether any threatening centres of low pressure, indicating string winds, at a great distance on the previous day, have moved more quickly or slowly than was expected. The appearance of the sky, the velocity and direction of the wind just before starting and the indications on an electric storm detector will also be well considered be-

The span on its journey to the bridge site will be towed and controlled by tugs, assisted by the westward current and influenced by the coexisting wind of unknown direction, but exerting a force of not more than 2 lb. per sq. ft. With tugs having a pulling capacity of 100,000 lb. in a 4-mile current, a velocity of the span of 4 miles per hr. can be produced relative to the water, and at the same time overcome the effect of a 2 lb. wind on the span. About 50 min. before high tide the span will be floated away from its erection site, with a westward current having

Fig. 5. Jacking equipment for hoisting suspended span, Quebec Bridge.

suitable for draining the scows and floating the span, occur at intervals of about two weeks time. The first favorable tide period, after the preparations for floating the span are complete, is about Sept. 12. If the weather conditions are not favorable during this period, it will be necessary to await the next favorable height and range of tide, and so on until suitable tide and weather conditions co-exist. A full daily statement of the meteorological conditions throughout the country giving the position of high and low pressure centres at 8 a.m. and 8 p.m. will be received from the Meteorological

fore deciding whether or not to start. It is estimated that any winds which will exert a greater pressure than 2 lb. per sq. ft. can be foreseen, and in that event no start will be made. The current velocity at the bridge site is a maximum, one hour before high tide, and is flowing westward at a rate of 6.3 to 7.3 miles per hr. in a direction which will carry the span toward the main bridge site. At high tide the current velocity is less by about 1 mile per hr. The change of current from a westward to an eastward direction, when the velocity is zero, occurs about 1 hr. after high tide.

a velocity of about 6 miles per hr. At first the tugs will be used mainly for guiding the span. While on its journey to the bridge site the rate of progress will be used mainly for guiding the span. While on its journey to the bridge site the rate of progress will be observed by means of a series of ranges placed 0.2 miles apart within 1 mile of the bridge and $\frac{1}{2}$ mile apart from 1 to 3 miles distant from the bridge. The span should arrive at the bridge with a velocity of current of about 4 miles an hr. With such a current and a wind velocity of not more than 2 miles an hr. the tugs will have

no difficulty in stopping the span before coupling up to the mooring trusses.

The time of arrival will be controlled by the tugs so that the span will be in position about half an hour after high tide, when, for a period of 1 hr., the current does not exceed 3 miles per hr. and during which it changes direction. The tugs will hold the span against the wind and current while the 1½-in. steel mooring lines are being connected, as shown in figs 3 and 4. The span will then be pulled directly under its final position in the bridge by means of these 1½-in. mooring ropes, eight in number, two connecting at each corner of the span. At the end of each rope is a loop which, as soon as the span has come within reach and the speed is controlled, will be thrown over a double-headed cast-steel snubbing block or towing bitt, bolted to a seat provided at the joint XLO of the suspended span. Each 1½-in. rope is calculated to take a pull of 75,000 lb. The ropes pass through sheaves at the lower corners of the mooring trusses and from there run vertically to the trusses, where they connect to a nine-part ¾-in. wire rope tackle, which leads back to the drums of the derrick hoists, situated on the floor at the ends of each cantilever arms.

With one line out on each end, the load for a 7-mile current and 1-lb. wind (77,500) would be carried. With two lines cut (second position, fig. 3) the upstream pull of 145,000 lb. would provide for a 7-mile current and 6-lb. wind (145,000 lb.). With all four out at each end, a 220,000-lb. force could be exerted to overcome a 7-mile current plus an 11½-mile wind (219,000 lb.). In final hoisting position the upstream force becomes 121,000 lb., which is good for a 7-mile current and a 4-lb. wind. By transferring line 1 to bitt 2 in the third position a 7-mile current and a 17-lb. wind (293,000 lb.) would be overcome; by transferring line 4 to bitt 2 in the final position a 7-mile current and a 9-lb. wind (186,000 lb.) could be provided for.

The mooring frames, as shown in figs. 2 and 4, are made of two steel trusses with bracing and are suspended from the cantilever arm floor beams at panel point CF1. They are hung at the upper ends so that they can be swung back, in order not to obstruct the channel unnecessarily, practically up against the plane of the bottom chords of the cantilever arms, by means of a nine-part ¾-in. wire-rope tackle leading from the lower corners of the trusses to the connection to the floor between panel points CF5 and CF6 of the cantilever arms and from there to the main hoists, situated at the floor level of the cantilever arms and on the centre line of the bridge. These trusses and their connections throughout were designed to take a transverse pull from the suspended span of 300,000 lb.

As soon as the span is pulled into position, before being lifted from the scows, the hanger chains will be swung down and connected through the slotted holes at the lower end to the pins at the top of the short hanger link, shown in fig 5, connecting to the supporting girders under the joint XLO. These hanger chains at each corner of the span are made up of 4 strings of slabs to each chain. Each slab is built up of two 30 x 1½-in. carbon steel plates. The allowable working erection unit stress through the pin holes was 20,000 lb. per sq. in., which included the stress from 20% of the lifted load as impact. No reinforcing pin plates were used around the pin holes, and special tests made showed that this apparently

high working stress through the pin holes was perfectly safe for this type of connection. The slabs were manufactured and shipped in lengths of about 30 ft. c. to c. of end pin holes. They were controlled after being suspended from the jacking girders by means of a two-part tackle connecting to the cantilever arm trusses at panel point CL2. The hanger chains connect at the lower end to supporting girders, shown in fig. 5. These supporting girders are 6 ft. 11½ in. back to back of angles and 25 ft. long. They are built up of two plate girders, connected together by bearing stiffening and pin connection diaphragms and also by cover plates. The load of the suspended span is transmitted to the girders by means of a cast steel rocker joint, designed to allow turning about the transverse and longitudinal axes of the bearing.

The upper supporting girders at the CUO joint of the cantilever arm are designed in a similar manner to the lower supporting girders, the rocker bearing for the girders and the pin connection for the vertical hangers allowing turning about both the transverse and longitudinal axes of the supporting girders. With bearings of this design the suspended span may move in any direction under the influence of whatever external forces from wind or current may act on it during the hoisting of the span. The total load carried by the hanger chains while lifting the span is 5,147 tons. The supporting girders, hanger chains, jacks and jacking girders and all their connections are designed throughout to carry this lifted load plus 20% impact.

As shown in fig 5 the jacking girders are located at the same elevation as the floor of the cantilever arm. They are hung from the upper supporting girders by stiff hangers that are pin connected at the upper and lower ends. At the lower ends these stiff hangers are attached to guides built of plates and angles that pass through the upper jacking girders and are riveted into the lower jacking girders. The position of the lower girders is therefore fixed, and their distance from the panel point CUO does not change during the jacking operation. The upper girders are the movable girders, and they slide up and down the guides as the 1,000-ton jacks are operated. These jacks are placed between the upper and lower jacking girders 2 at each corner of the span, and do the work of lifting the span. In order to avoid binding of the jacks, due to the deflection of the jacking girders under load, the jacks are provided with rocker seats at their upper and lower bearings. They are located at the extreme ends of the jacking girders, where they bear against transverse diaphragms riveted into the jacking girders.

In addition to the hydraulic jacks, following up screw jacks are provided as a safety device in case anything should go wrong with the pumping system for the hydraulic jacks or the jacks themselves, if they should fail to maintain the pressure of about 4,500 lb. per sq. in. necessary to hold the weight of the suspended span while being lifted. These screw jacks also react against cross girder diaphragms in the jacking girders. The screw itself is counterweighted so that practically all the friction due to its own weight is eliminated, and the operator of the screw jacks will be able to turn the screw without difficulty and follow the operations of the hydraulic jacks with equal speed and very little exertion.

The hanger lifting chains are guided between cross pin bearing diaphragms

riveted into the jacking girders. These chains are bored every 6 ft. c. to c. to receive a 12-in. pin while the cross diaphragms have holes for the same diameter of pin bored at 2 ft. centres. The clearance provided in the pin holes of the hanger chains is ½ in. transversely and ⅞ in. longitudinally, and in the pin holes of the cross-diaphragms 1 in. transversely and 1¼ in. longitudinally. This clearance is considered ample to allow the pins to be driven, no matter what position the span may take while hoisting, due to the action of current and wind. Having the pin holes in the cross diaphragms at 2-ft. centres enabled the pin holes in the hangers to be bored at 6 ft. centres and at the same time accommodated the 2 ft. stroke of the jacks.

Each operation of the jacks will lift the span 2 ft. During the lifting or upward stroke, the 12-in. pins engage the hanger chains through the diaphragms in the upper jacking girders. At the finish of the stroke the pins are entered in the diaphragms of the lower jacking girders to engage the hanger chains. The upper pins are then removed, the jacks and upper girders lowered, the upper pins again entered, the lower pins removed and jacks again operated. As each 30 ft. length of hanger chain passes up through the upper jacking girders it is disconnected and removed. The jacking pins are counter-weighted and balanced to enable them to be handled with facility by the men on the operating platform.

The jacks are supplied with water under pressure of about 4,500 lb. per sq. in. by a pair of direct acting double-plunger pumps, operated by compressed air and located on the centre line of the bridge floor at the ends of the cantilever arm. By means of a pair of control valves installed in front of the pumps the supply of water sent to each corner of the span can be regulated, and in this manner with the aid of a simple counterweighted line indicator in front of the valve operator, which will show any difference in level between the lifting girders on each side of the bridge, the two corners of each end of the span can be kept at the same elevation. Another set of valves with a similar indicator is placed on the operating platform in front of each set of jacking girders to control the water supply to each separate jack, so that the ends of the jacking girders, during jacking operations, can be kept level. The feed-pipe line is connected to the jacks by means of two ¾-in. copper pipes which are sufficiently flexible to allow for any swaying motion of the span while being hoisted.

Tests of the complete water feed pipe lines and hydraulic jacks were made under a pressure of 6,000 lb. per sq. in. The jacking girders were tested with a load on the jacks equal to 5,000 lb. per sq. in. pressure. The working load on these jacks would be about 4,500 lb. per sq. in. Each individual scow was tested for leakage after the scows were in place.

The vertical distance through which the span will be hoisted depends upon the varying elevation of the water level, but will be approximately 145 ft. Each operation of the jacks hoists the span 2 ft., and a cycle will take about 15 min. to complete. Altogether there will be approximately 73 separate lifting operations, and the time consumed from the moment of coupling up to the hanger lifting chains to the moment of driving the last pins connecting the two portions of the permanent eye-bar suspenders will be approximately 20 hrs., provided no delays occur.—Engineering News.

Electric Railway Department

Ontario's Jurisdiction Over Hamilton, Grimsby and Beamsville Electric Railway Confirmed.

The Ontario Railway and Municipal Board, on May 10, 1915, ordered the Hamilton, Grimsby & Beamsville Electric Ry. to file within 30 days complete plans and specifications for sanitary conveniences on its passenger cars and in its passenger station at Grimsby. The company appealed against the order, its principal contention being that the Ontario Board had no jurisdiction over it, but that it was under Dominion jurisdiction. On Nov. 9, 1915, the Appellate Division of the Ontario Supreme Court gave unanimous judgment dismissing the company's appeal with costs and confirming the board's order. The company then appealed to the Judicial Committee of the British Privy Council, and on July 18, 1916, the following judgment was delivered by the Lord Chancellor:—

This is an appeal of the Hamilton, Grimsby and Beamsville Ry. Co. against a judgment of the Appellate Division of the Supreme Court of Ontario, affirming an order of the Ontario Railway and Municipal Board, dated May 10, 1915. The board's order directed that the appellants should construct certain sanitary conveniences on their railway, and the appeal against that order was brought, not because the appellants objected to the construction of the sanitary conveniences, but because they asserted that the Ontario Railway and Municipal Board had no jurisdiction whatever to make the order, inasmuch as their railway was really a Dominion railway, and not in any way under the control of the Provincial Board. The facts of the case are these. The appellant company was incorporated by the Province of Ontario in 1892. The extent of the railway it was formed to construct and work is some 23 miles or thereabouts. It is worked by electric power, and it is wholly situate within the Province of Ontario. In 1895 the appellants proposed to carry their railway across the track of the Grand Trunk Ry. track, and an order was made on Jan. 28, 1895, permitting such crossing. The appellants assert that, by virtue of the British North America Act of 1867 and the Railway Act of Canada of 1888, the effect of that order was to take their railway out of the jurisdiction of the Province of Ontario and place it within the category of a Dominion railway.

The British North America Act of 1867, by sec. 92, provides that in each province the legislature may exclusively make laws in relation to matters coming within the classes of subjects that are there enumerated, and among the classes that are enumerated are local works and undertakings, other than "such works as, although wholly situate within the province, are before or after their execution declared by the Parliament of Canada to be for the general advantage of Canada or for the advantage of two or more of the provinces."

In 1888 the Railway Act of Canada was passed, and this contained certain provisions with regard to railways crossing other railways that were within the legislative authority of the Parliament of Canada. There are many sections in that statute to which reference would be

needed if it were necessary to consider exactly the terms of sec. 306 upon which the appellants rely, for it is quite true that if a comparison be made between sec. 306 and some of the other sections, a contrast will be found between the specific railways which are the subject of sec. 306 and the general terms in which all railways are referred to in the other sections. This would become a very important matter if their Lordships thought it was essential to construe sec. 306. But they do not think it is essential, for this reason, that even assuming in favor of the appellants that sec. 306 did effect a declaration within the meaning of sec. 92, sub-sec. 10 (c) of the British North America Act, and thus place the railway within the authority of the Dominion and outside the authority of the province, yet none the less that statute has been in terms repealed, and if that repeal is effectual to change the status of the appellant company, then their railway is a Dominion railway no longer, and the Ontario Railway and Municipal Board had full jurisdiction to make the order which is the subject of the appeal.

The statute which effected this repeal was passed in 1903. The repealing section is sec. 310, and that repealed in toto the previous statute, and by sec. 7 a special declaration is made with regard to railways crossing other railways that were subject to the legislative authority of the Parliament of Canada. That section runs in these terms: "Every railway, steam or electric street railway or tramway, the construction or operation of which is authorized by a special act passed by the legislature of any province now or hereafter connecting with or crossing a railway, which, at the time of such connection or crossing, is subject to the legislative authority of the Parliament of Canada, is hereby declared to be a work for the general advantage of Canada, in respect only to such connection or crossing, or to through traffic thereon, or anything appertaining thereto....."

This railway in question answers every one of the necessary conditions prescribed in the earlier part of sec. 7. If, therefore, there was power left in the legislative authority of the Dominion of Canada to pass this act, then it is obvious that, even assuming the railway had been placed within that authority by sec. 306, it is there no longer, and there is no power within the Dominion to control its affairs. Their Lordships are clearly of opinion that sec. 92, sub-sec. 10, never intended that a declaration once made by the Parliament of Canada should be incapable of modification or repeal. To come to such a conclusion would result in the impossibility of the Dominion ever being able to repair an oversight by which, even with the greatest care, mistakes frequently creep into the clauses of acts of Parliament. The declaration under sec. 92, sub-sec. 10 (c), is a declaration which can be varied by the same authority as that by which it is made. In the present case their Lordships see no reason to doubt that if the statute of 1888 effected such a declaration to place the whole rail-

way under Dominion control, that declaration has been properly and effectually varied, and the appellant company has ceased to be, even if it ever once was, under the control of the Dominion Board.

Other questions have been raised in the course of the argument, and notably one of great importance, with regard to the power of the Dominion Parliament to pass such a statute as that of 1888, on the hypothesis that sec. 306 bore the meaning for which the appellants contend. This question is of great importance, but, for the reasons that have been given, its decision is unnecessary. Their Lordships think that this appeal should be dismissed on the simple question which has already been stated. Their Lordships will therefore humbly advise His Majesty that this appeal should be dismissed with costs.

Montreal Tramways Co's Conduits.

The Montreal Tramways Co. is about to construct conduits to connect its power house, sub-stations, etc. Contracts have been let as follows: To Quinlan & Robertson Co., from Cote and Lagachetiere, along Lagachetiere to Inspector, along Inspector to St. James, along St. James to St. Remi to Notre Dame, along Notre Dame to Fourth Avenue, along Fourth Avenue to Canadian Light and Power Co. terminal, with branches on Aqueduct St. to the William St. power house, and on Glen Ave., to the St. Henry sub-station;

To G. M. Gest Co., from Cote and Lagachetiere, along Lagachetiere to Dorion, along Dorion to Notre Dame, along Notre Dame to Hochelaga power house, with branches on Sanguinet and Henri Julien Sts., to St. Denis sub-station, and on Cote St. to the proposed Cote St. sub-station.

The conduit will be 4 in. round bore, vitrified clay, with brick manholes, concrete floor and roof, cast iron frames and covers. The total trench length of the installation will be approximately nine miles. The methods of construction will be the ordinary ones on work of a similar nature.

The Peterborough Radial Ry. Co.'s corporate existence is ended, the property having been owned since Mar. 1 by the Province of Ontario and having been operated since June 1 by the Hydro Electric Power Commission of Ontario as trustee. The line will continue to be known as the Peterborough Radial Railway.

Hamilton, Ont., jitney owners have discovered that the city bylaw under which they operate does not provide for the fare to be charged for the service given. As a result there is no uniformity of charge, and drivers ask whatever fare suits them. The traffic, particularly at night, is reported to be getting into the hands of foreigners.

Brandon Municipal Ry. The Brandon, Man., City Council has under consideration a proposal to take up with the Dominion Government the question of the extension of the electric railway.

The Montreal Tramways Co's Franchise.

The Montreal Board of Control is giving a general consideration to the Montreal Tramway Co.'s franchise in the city. The matter came before the board, in its present form in a letter from E. A. Robert, President of the company, dated July 14. A report on the position of affairs, and dealing with the letter was prepared in the City Engineer's Department, and is the basis of the board's deliberations. The terms of the new franchise which Mr. Robert suggests should be given the company, are: The present franchise to be extended for 30 years, and privileges granted to carry freight, and to construct and operate an underground electric railway system. In exchange for these privileges the company will agree: To make the extensions to be presently agreed upon between the city and company. The future extensions to be made by the company as agreed upon from time to time, or in event of a disagreement between the city and the company as to the extensions asked being justified, the question to be decided by the Quebec Public Utilities Commission. The necessary right of way in all cases to be provided by the company.

The company will agree to surrender all its franchises affecting the territory now forming part of the city, and its franchises in the territory now outside of the city limits, when such territory shall form part of the city of Montreal.

The company will agree to give a uniform rate of fare of 5c on its surface line in the territory now forming part of the city of Montreal and such territory as becomes part of the city of Montreal comprised within the eastern limits of the city of Lachine, the eastern limits of Mercier Ward, the River St. Lawrence on the south and the Riviere des Prairies on the north. The company will also agree to sell on its surface lines, good for all days except Sundays and holidays, 8 tickets for 25c between 6.00 and 8.00 a.m. and between 5.00 and 7.00 p.m. and 10 tickets for 25c for school children. The fare on the underground system shall be 5c straight.

In consideration of above being accepted, the company will pay the city annually \$200,000 for the first five years, \$300,000 annually for the next five years and \$500,000 annually afterward while the contract remains in force. The exemption of taxes, enjoyed by the company in all the territory wherein it may operate to remain during the life of the contract.

A press report states that a syndicate is being formed in New York to submit a proposal for building a system of elevated railways in Montreal. Duncan McDonald, formerly General Manager Montreal Tramways Co., is said to be identified with the syndicate.

Calgary Municipal Railway Earnings.

Following are the earnings, expenses, etc., for August, and for eight months ended Aug. 31:—

	August.	8 months to Aug. 31.
Car earnings	\$57,242.58	\$390,653.55
Miscellaneous earnings ..	870.93	7,186.09
Total earnings	58,113.51	397,839.64
Operating expenses	31,242.96	237,406.51
Overhead and fixed charges	16,583.01	131,952.71
Construction and maintenance, Sarcee line	594.45	14,504.31
Total expenses	48,420.42	383,863.53
Surplus	9,693.09	13,976.11

Quebec Railway, Light, Heat and Power Co's Report and Meeting.

Following are extracts from the report for the year ended June 30, presented at the annual meeting in Montreal, Sept. 12: The gross earnings from operation for the year were \$1,731,732.49, compared with \$1,548,096.35 in 1915, an increase of \$183,636.14. Adding miscellaneous income \$236,868.93, makes a total revenue from all sources of \$1,968,601.42, an increase of \$184,527.10. The operating and maintenance expenses were \$1,029,750.96 against \$924,817.22, an increase of \$104,933.74. The fixed charges and taxes of all kinds were \$723,447.26, leaving a net surplus of \$215,403.20, which, added to the previous surplus, leaves a total surplus to date of \$562,902.65. The properties and plants of the company and its various subsidiary companies have been maintained in the same high state of efficiency as heretofore, as evidence of which there was expended during the year on maintenance accounts \$220,602.51.

Assets.	
Investments—stocks, bonds and interests in other corporations.....	\$19,181,389.43
Treasury bonds	1,742,700.00
Advanced to controlled companies for construction, etc.	1,165,251.48
General construction, etc.	528,413.29
Cash on hand and in banks	167,456.55
Accounts and bills receivable	297,637.89
Stores and supplies on hand	155,319.33
Prepaid expenses	12,089.21
	\$23,250,257.18

Liabilities.	
Capital stock	\$10,000,000
Less: Unissued	500
	\$9,999,500.00
Bonds ..	\$14,600,000
Less: In escrow to redeem bonds of subsidiary companies ..	\$3,659,000
Less cancelled ..	144,000
	3,803,000

	10,797,000.00
Bills payable	175,492.59
Accounts payable, etc.	412,222.01
Sundry loans	495,293.51
Accrued interest	129,638.87
Deferred and unclaimed interest....	548,818.21
Accrued charges, etc.	47,373.30
General suspense and reserves	82,016.04
Surplus ..	562,902.65
	\$23,250,257.18

The directors for the current year are: Sir Rodolphe Forget, President; L. C. Webster, Vice President; J. N. Green-shields, K.C., Hon. R. Mackay, L. J. Tarte, L. G. Morin, D. O. L'Esperance, Paul Galibert, C. A. Lavigne and C. Donohue. The number of directors has been reduced by one, A. Berthiaume, T. Bastien and A. Ecrement retiring, and C. A. Lavigne and C. Donohue being added.

Jitney Competition with Winnipeg Electric Railway.

During the hearing by the Manitoba Public Utilities Commission on Sept. 12 of the Winnipeg City Council's application to compel the Winnipeg Electric Ry. to build and operate an electric car line on Sargent St. from Arlington St. to Wall St., evidence was given as to the effect of jitney competition on the electric railway earnings. Wilford Phillips, General Manager and Chief Engineer, said: "We haven't the money and material to do it. The jitney business has cut the earnings of the Sargent Ave. line by nearly 40%. I would like to see the jitney business done away with altogether. It is an unfair competition to the street railway. Our franchise does not anticipate such a competition. It would cost \$10,000 to build the extension the city is asking, and we can't afford it."

R. R. Knox, Traffic Superintendent, presented a statement showing a decrease of \$550.93 in the earnings of the Sargent Ave. line during the first week in Sept., 1915, compared with the same period of the previous year. This he attributed to the activities of the jitneys. On Sept. 6, last, 46 different jitneys were in operation on this line, between 5 p.m. and 6.30 p.m. These made 188 trips and carried 474 passengers. "We have tried to combat the jitneys," said Mr. Knox, "by increasing the number of our cars, but without success. Very few of our car lines are paying."

The Commissioner reserved his decision.

A press report says that the Winnipeg Electric Ry Co. is preparing to institute suit against the city for damages, alleging that failure of the municipality to stop jitney traffic has deprived the company of half of the normal annual income. The company claims to operate under an exclusive transportation franchise.

Mainly About Electric Railway People.

Jas. Anderson, General Manager, Sand-wich, Windsor and Amherstburg Ry., is convalescent after a short illness.

Lieutenant Colonel G. C. Royce, General Manager, Toronto Suburban Ry., has been appointed Brigadier of the 9th Infantry Brigade, at present at Camp Borden, Ont.

E. S. Hughes, Traffic Manager, Windsor, Essex and Lake Shore Rapid Ry., returned to his office at Kingsville, Ont., Sept. 18, after two weeks absence through illness.

Sir Max Aitken, M.P., associated with several Canadian enterprises, and formerly living in Canada, but latterly in England, has been elected a director of the British Columbia Electric Ry. Co.

A. E. Pickering, heretofore Manager, Sault Ste. Marie, Ont., Water and Light Department, has been appointed Manager Great Lakes Power Co. and International Transit Co., Sault Ste Marie, Ont., succeeding F. E. Kruesi.

C. P. Van Norman, formerly Resident Engineer, Toronto & York Radial Ry., who enlisted for overseas service last autumn, is now a lieutenant in the 127th Battalion, York Rangers, and is stationed at Camp Borden, Ont.

Miss A. M. Grace, only daughter of J. C. Grace, Secretary, Toronto Ry., was married at Sturgeon Point, Ont., Aug. 30, to Lieut. C. J. Mitchell, of the 170th Battalion, C.E.F., of Kirkfield, Ont., and nephew of Sir Wm. Mackenzie.

G. R. G. Conway, M.I.C.E., M.Can.Soc. C.E., formerly Chief Engineer and Assistant General Manager, and now Consulting Engineer, British Columbia Electric Ry., who has been living in Toronto for the past year or two, left there Sept. 21 for Mexico City, to represent the bond holders' committees of Mexican Light and Power Co. and Mexico Tramways Co. Mrs. Conway and her family are remaining in Toronto for the present.

J. A. Everell, Superintendent, Montmorency Division, Quebec Ry. Light & Power Co., which division is to be taken over by the Dominion Government, has been appointed District Passenger Agent, Canadian Government Railways, Montreal, vice D. McDonald, deceased. The circular issued by the Canadian Government Railways' General Passenger Agent, announcing his appointment says: "Mr. Everell will also retain his position as

Superintendent of the Quebec Railway Light & Power Co."

Charles Lewis Wilson, who was elected Vice President, Canadian Electric Railway Association, for the current year, at the recent annual meeting, was born at Boston, Mass., May 23, 1871, and from 1888 to 1891, was Master Mechanic, Eureka Milling Co., Toronto; 1891 to 1892, in Freight Department, G.T.R., Montreal; 1892 to 1904, in different positions on Toronto Ry.; 1904 to 1907, Traffic Manager, Toronto and York Radial Ry., Toronto, and since 1907, Assistant General Manager, same company.

Electric Railway Notes.

The Winnipeg Electric Ry. has informed the Winnipeg Trades and Labor Council, in reply to a request to run excursion trains to the Lake Winnipeg beaches on Sundays, that it would be a direct violation of the law.

An arbitration board is being formed to settle differences between the Moose Jaw Electric Ry and its employees. Jas. Summerville was nominated Sept. 16 to represent the men. The other members of the board had not then been named.

The London & Port Stanley Ry. will almost certainly have to purchase additional rolling stock, whether the second tracking of a portion of the line is carried out or not, as it was impossible during the past summer to handle the traffic without renting a number of steam railway passenger cars.

A contemporary states that the Montreal and Southern Counties Ry. intends to construct a number of new terminals along the route between Montreal and Granby. A line usually has two terminals, one at either end, and the business of a terminal is to terminate. Our contemporary should revise its terminology.

The International Ry. which operates the Niagara Falls Park and River Ry., on Canadian territory, has granted an additional stopover privilege at the Whirlpool Rapids, to enable visitors taking the belt line route, to take advantage of the recently constructed aerial railway over the whirlpool. The only other railway of this kind is at San Sebastian, Spain.

A deputation from the Montreal building trades waited on the Board of Control, Sept. 1, to ask that the city arrange with the Montreal Tramways Co. for the transportation of freight over its lines. The want of cheap and expeditious handling of building material, and excavated material is, the deputation pointed out, interfering with the city's improvement.

The bylaw to raise \$15,000 by debentures for purchasing motor busses to be operated by the Walkerville, Ont., Town Council, was defeated by the ratepayers by a large majority, Sept. 2. The proposal was made by the council in connection with the discussion of differences with the Sandwich, Windsor & Amherstburg Ry., which operates its electric railway in the town.

British Columbia Electric Ry. employees are discussing the wages question. They allege that the general reduction made in 1915 was not warranted by conditions, and the recent difference with the electrical workers has precipitated matters. All steps taken to arrive at a settlement had failed up to Sept. 16 when the men held a mass meeting and subsequently an agreement was reached.

The Manitoba Court of Appeal has granted the Winnipeg Electric Ry. leave

to appeal the recent decision as to the electrolysis of city water pipes, which was to the effect that the Public Utilities Act was intra vires, and that the Public Utilities Commissioner had power to order the company to instal such appliances as would prevent electrolysis or materially lessen it.

There has been some difficulty between the British Columbia Electric Ry. and its linemen lately, and on Sept. 4, some of the company's officials repaired some sections of trolley wire which had become a menace to the safety of travel. As a result the difficulty has been increased. The general working conditions of the linemen are under review, and it is expected that the difficulty will be amicably settled.

M. G. Cameron, Goderich, Ont., suing for himself and other shareholders of the defunct Ontario West Shore Ry. Co. and as judgment creditor for \$128,816.66, is asking an Ontario court for a garnishee order against the City of Toronto for a balance of \$850 alleged to be due J. W. Moyes, who controlled the O. W. S. Ry., for a report on the Toronto Ry. The city denies that any balance is owing Moyes.

The Walkerville, Ont., Town Council is protesting to the Sandwich, Windsor and Amherstburg Ry., as to the service being given in the town, contending that recent records of the traffic to show that the service given does not comply with the terms of the franchise. The company was notified Sept. 12, that if the service was not improved steps would be taken to attempt to enforce the penalty clause of \$10 a day.

A deputation from the West Kildonan, Man., municipal council waited on the General Manager of the Winnipeg Electric Ry., Sept. 14, to ask for an improvement of the electric car service and a reduction of fares on the lines in the municipality. It was agreed that a 10 minute service between 9 a.m. and midnight be given in place of the present hourly service, but it was pointed out that there could be no reduction of fares at present.

A strike of union employees of the Quebec Ry. Light and Power Co. occurred, Aug. 30, during the Provincial Exhibition and traffic was disorganized for the greater part of that day. A temporary settlement was arrived at, and the service was resumed, pending the appointment of a board under the Labor Disputes Act, to enquire into the complaints. The company withdrew warrants issued against the men for breach of contract, and agreed to pay 50 per cent. of the wages for the time they were off duty. The Sillery line and the upper town line, which are operated by non-union men were not affected.

Fort William Electric Ry. Wages.

The wages of the Fort William Electric Railway employees have been advanced recently as shown below, the rates paid previously per hour being also given.

Conductors and motormen.	Old rate.	New rate.
1st 6 months	24c	26c
2nd 6 months	24c	26c
3rd 6 months	24c	26c
4th 6 months	24c	26c
5th 6 months	24c	26c
Car barns.	Old rate.	New rate.
Engineer	24c	26c
General repairer	24c	26c
Painter	24c	26c
Arm winder	30c	\$90 a month

Electric Railway Finance, Meetings, Etc.

Brandon Municipal Ry.—It is estimated that the operating loss for the current year will be \$50,000.

British Columbia Electric Ry., and allied companies:—

	July 1916	July 1915
Gross earnings	\$538,293	\$510,723
Expenses	475,093	483,881

Montreal Tramways Co.—The Montreal City Council claims that the Montreal Tramways Co. owes it \$194,944, and the company claims that the city owes it \$119,604.29. E. A. Robert, President of the Company, suggested to the Board of Control, Sept. 6, that the council should accept a cheque for the difference between these two amounts, and submit the other claims to a "friendly action."

Sherbrooke Ry. & Power Co.—Gross earnings for year ended June 30, issue of \$75,000 6% debentures of the \$136,178.65; operating expenses \$70,249.55; net earnings \$65,929.10, against operating expenses; \$55,643.63 net earnings for the year ended June 30, 1915.

Sudbury-Copper Cliff Suburban Electric Ry.—Brokers are offering for sale an Town of Sudbury, Ont., due Jan. 10, 1936, guaranteeing the Sudbury-Copper Cliff Suburban Electric Ry. The price is 101.46 and interest yielding 5%. The prospectus states that the railway's net earnings for the first six months of operation were \$12,000, which taken on an annual basis is enough to pay the bond interest practically six times over. A sinking fund provides for the redemption of the entire issue at maturity.

C.P.R. Electric Railways.—The C.P.R. annual report for the year ended June 30 shows the following receipts from subsidiary electric railway companies:—Interest on bonds, Berlin, Waterloo, Wellesley & Lake Huron Ry. (Galt, Preston & Hespeler Ry.) \$17,040; dividend on Berlin, Waterloo, Wellesley & Lake Huron Ry. stock, \$12,500; interest from Hull Electric Ry., \$60,000.

Niagara Falls Park & River Railway Safety Betterments.

J. C. Royce and H. W. Middlemist, engineers for the Ontario Railway and Municipal Board, have presented the following report on the improvements which have been made on the Niagara Falls Park & River Railway recently:—On Aug. 19, accompanied by the Chairman of the Board, we conducted a test on the Queenston hill, in order to ascertain the efficiency of the new safety switch and the effect on the speed of the car produced by the change of grade and radius of curve. A car was provided by the company, whose officials were present and witnessed the test.

A test was first made of the safety switch by starting the car freely without trolley connection from the curve at Dumfries St., 200 ft. up the grade, and allowing it to accelerate to the end of the switch. The car was then taken to Dumfries St., to a point about half way between the two curves there, and started freely and allowed to attain a speed it would likely do in case of accident, and was brought to a stop at the end of the safety switch. A test was then conducted in order to ascertain the acceleration of the car from the safety switch to the end of the lower curve near the river, the radius of which had been increased to 145°, and the grade reduced to 4.2%. The car started by gravity from the switch and passed satisfactorily around the curve without the application of the brakes.

A further test was made of the braking power of the four motors which are now installed in the cars, in accordance with the Board's order. The trolley was taken off the wire and the car allowed to run free, and when it attained considerable speed, the lever on the controller was thrown into reverse position and the car was brought successfully to a standstill by the resistance of the motors only. Another test was made to ascertain the acceleration which the car would attain on the curve itself and this was found to be comparatively small on account of the curve resistance.

We consider these tests satisfactory, in so far as they show the efficiency of the safety switch, and that if a car should run freely down the grade from the safety switch it should pass around the curve at the river at a safe speed, unless power is applied by the motorman voluntarily, in which case, no precautions taken by the Board will avail. We have taken into consideration the use of a dead trolley wire between the switch and the end of the curve, as a precaution against the motorman using current and thereby attaining speed beyond the safety limit on the curve. We have decided, however, not to recommend this, as it is advantageous to have current available at all times while passing down grade, not only for operating the air brake and lighting system, but to enable the motorman to reverse his car, which would be advantageous in case of emergency.

We also called the superintendent's attention to an irregularity in the curve on the safety switch and he promised to rectify this. We would recommend that the spring frog at the safety switch be kept greased and have pointed this out to the Superintendent, who has promised to see to it.

In reference to the improvements which have been made on the N. F. P. & R. Ry. to secure greater safety it may be stated that the original construction of the portion of the line from Queenston wharf to Brock's monument required

similar methods to those used by steam railways in mountainous countries. The distance on a straight line from the top of the hill to the wharf is 2,650 ft. The difference in elevation is 293.8 ft. To descend this hill, without an excessive gradient, the line had to be lengthened. This was accomplished by constructing along its face for 2,100 ft. westerly, where it turned in an easterly direction, still on a descending grade. The length of track actually constructed between the named points was 7,500 ft. A section of track where the gradient was 5.7% at the foot of which was a curve having a radius of 115 ft., has been raised several feet at the low place recently, and the alignment has been changed so that the curve radius is now 145 ft. A new safety switch has also been installed.

Hydro Electric Radial Railways for the Niagara Peninsula.

A meeting of delegates of the Ontario Hydro Electric Railway Association was held at Hamilton, Sept. 1, when plans of the proposed railway to be built by the Ontario Hydro Electric Power Commission, between Toronto and Niagara Falls, were explained and discussed. The portion of this line between Toronto and Port Credit has already been dealt with by the various municipalities concerned, the second section, that between Port Credit and St. Catharines being one chiefly under discussion.

F. A. Gaby, Chief Engineer of the Commission, in explaining, stated that the route it was proposed to follow through Hamilton was that adopted by the Canadian Northern Ry., and it was probable that the C. N. R. right of way would be taken over and the Hamilton station located on James St., near Murray St. The line, when completed, would be available for other railway companies on terms being arranged. It was estimated that the right of way would cost \$2,000,000 and the construction, so far as Hamilton was concerned, \$2,250,000, and stations and terminals about \$500,000. The line would run from Port Credit, where a junction would be made with the proposed Toronto-London line, thence to Clarkson, through the centre of Oakville, then south of the G.T.R. and parallel with the Hamilton Radial Ry., through Burlington. From the last mentioned point two surveys had been made, one on the north and one on the south of the Plains Road. The line would cross the G.T.R. overhead and proceed along the proposed Canadian Northern Ry. route and thence to Stoney Creek, Winona, Vineland, Grimsby, Beamsville, and St. Catharines. It was intended to use 80 lb. steel, and the whole equipment would be of the highest class, with rolling stock similar to that used on the London and Port Stanley Ry. Mr. Gaby also stated that four lines had been surveyed from St. Catharines to Niagara Falls, and the Commission was of opinion that two lines would be required, one to go via Port Robinson, and one by a more direct route.

The Hamilton Board of Control had a conference with J. N. Stanley, Assistant Engineer of the Commission, and subsequently a report was made to the City Council, showing that the estimated cost of building the line from Port Credit to St. Catharines was \$8,935,363, including stations and terminals. Car shops and rolling stock were estimated at \$425,000, the gross total cost being \$11,360,363. It was also stated that a subsidy of \$6,400 a mile on the 59.57 miles would produce

\$381,248, and reduce the cost to \$10,979,115.

On Sept. 18, the councils of St. Catharines City, Lincoln County, and Louth and Grantham Tps. passed resolutions endorsing the proposal. J. N. Stanley, Assistant Engineer, informed the St. Catharines Council, that the Commission intended to reach Niagara Falls, but as there was already a line between St. Catharines and Niagara Falls, it was considered that the line to Port Credit would be sufficiently large for a separate undertaking. He stated that the cost of construction would be divided between the municipalities concerned according to assessment.

At a special meeting of the Hamilton City Council, Sept. 19, a resolution was passed endorsing the scheme, but the council declined to approve of any definite route through the city until route plans had been considered by it.

Toronto Suburban Railway Deviation at Lambton.

The Ontario Railway and Municipal Board has issued its order authorizing the Toronto Suburban Ry. to deviate its Dundas St. line at Lambton Mills, to a private right of way owned by the company. The order is as follows: Upon the application of the Toronto Suburban Ry. Co. and upon hearing counsel for the applicant and for York Tp. and the City of Toronto having, at the hearing, applied to be made parties thereto, the Board was pleased to direct that counsel for the City of Toronto should also be heard, but that the said city shall not be made parties hereto, and the said application having come on for judgment, the Board orders that the plans, profiles and book of reference filed with the Board showing the proposed deviation, be approved, and the company is directed to make the deviation, subject to the conditions of, and in accordance with the agreements between the parties and the statutes relating thereto.

The City of Toronto strongly objected to the connection proposed to be made, but as it had no locus standi, it endeavored to prevail upon the York Tp. council to appeal against the Board's order, the city to pay all costs. The council, however, after consulting its solicitor, decided that nothing could be gained by an appeal, as he expressed the opinion that it could not be successful. The council also stated its belief that the interests of Toronto would not be affected seriously by the connection.

Jitney Traffic Notes.

The Vancouver, B.C., City Council has in course of arrangement the difficulty with the jitney owners as to the bonds which will be accepted under the bylaw.

A large number of car owners in the City of Quebec operated them as jitneys, during the day on which the Quebec Ry. Light and Power Co.'s conductors and motormen went on strike, Aug. 30.

R. Robson, a jitney owner, was fined \$200 at the Provincial Police Court, Winnipeg, Sept. 5, for using his jitney as a "blind pig." Some other jitney operators are suspected of being guilty of similar practices.

During the Toronto Exhibition recently practically the whole of the licensed jitneys in the city were operating on east and west routes. Scarcely any accommodation was given north and south on Yonge St.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—A deputation of residents of Terrace Hill waited upon the Brantford Railway Commission, Sept. 20, to urge the extension of the electric railway into that section of the city. The route suggested by the deputation is as follows: Branching off at Market St. at Grey, along Grey to Clarence, under the Clarence St. subway to Dundas St. to the hill. This would give a direct line to the hill without change, and would also serve a section of the city below the hill which it is claimed would be a good revenue producer. The rails and other material taken up from the section of the old Grand Valley Ry. sold to the Lake Erie & Northern Ry. could be utilized. The commissioners assured the deputation that they would do the best possible to provide the accommodation required. The matter of the route would have to be given careful consideration. (Sept., pg. 378.)

British Columbia Electric Ry.—The Victoria, B.C., City Council, in connection with the resurfacing of Oak Bay Ave., has invited the cooperation of the company to have the entire avenue resurfaced at the same time. (Sept., pg. 378.)

Calgary Municipal Ry.—We are officially advised that it is proposed to connect the tracks over the west Centre St. bridge, Calgary, Alta., now under construction. This will involve about half a mile of construction, the material for which is on hand. T. H. McCauley is Superintendent, Calgary, Alta. (Sept., pg. 378.)

Dominion Power and Transmission Co.—We are officially advised that there is being completed about a mile of track, paving, etc., on Wentworth Ave., between Barton and Burlington Sts., on the company's Hamilton St. Ry. line.

Construction is progressing on the new steam power plant in Hamilton. (See Hamilton St. Ry., July, pg. 295.)

Guelph Radial Ry.—We are officially advised that it is expected to lay about 3,000 ft. of track on Ogilvie St., Guelph, next spring, to replace existing track. A. H. Foster is Manager; Guelph, Ont. (Nov. 1915, pg. 444.)

Hull Electric Co.—We are officially advised that the company contemplates paving its portion of Lorimer Ave., Bridge St., Montcalm St., and the Chelsea Road, in all about 10,000 ft. G. G. Gale is General Manager, Hull, Quebec. (April, pg. 156.)

Lake Erie and Northern Ry.—The Board of Railway Commissioners was reported Sept. 12, to have decided in favor of the contention of the Brantford, Ont., City Council, in respect of certain matters in dispute. The most important of these matters was the company's refusal to acquire an additional 7 ft. of available ground for the widening of Water St., adjacent to its building. (Sept., pg. 378.)

London and Port Stanley Ry.—In reference to the reported building of a second track on this line between London and Port Stanley, Ont., we are officially advised that it is not thought this work will be gone on with for some little time at least, although, from the amount of traffic the work is a necessary one. Under any circumstances it will be necessary to purchase additional rolling stock in order to handle the traffic offering, a number of steam railway passenger cars having had to be rented during the past summer. (Sept., pg. 378.)

Moncton Tramway, Electricity and Gas Co.—Negotiations are reported to be in progress between the company and the city council, for the extension of the line from the present terminus on John St., Moncton, N.B., to the corner of Wilbur and Union St. (Aug., pg. 338.)

Oshawa Ry.—Tenders are under consideration for the work and material required in the construction of a heating chamber, and for the installation of a complete steamheating system in the car barn and works shops at Oshawa, Ont. H. W. Cooper is Manager, Gananoque, Ont. (Nov. 1915, pg. 441.)

Sandwich, Windsor and Amherstburg Ry.—We are officially advised that the company has under construction 2,200 ft. of double track line on London St., west, Windsor, Ont. (July, pg. 295.)

Saskatoon Municipal Ry.—It was reported Sept. 15 that tracks for the electric railway was being laid on the new 25th St. bridge, and that the work was expected to be completed by Sept. 30. About 1,200 ft. of double track is being laid. The bridge is being built and it is expected to be opened for traffic by the end of October. (Sept., pg. 378.)

Sudbury-Copper Cliff Suburban Electric Ry.—We are officially advised that nothing definite has been decided upon as to the Murray Mine and Coniston extensions. The company is building a one mile extension in Sudbury, Ont. (Sept. pg. 378.)

Three Rivers Traction Co.—We are officially advised that the company is completing the building of an extension of its line from Three Rivers, Que., to Cap de la Madeleine. The new track is being laid with 75 lb. rail, and is expected to be ready for operation early in October. An 85 ft. extension has been completed to the car barn and shop building, doubling its car capacity.

The total length of the Cap de la Madeleine division, from the starting point at the intersection of St. Maurice and St. Cecile Sts. to Cap de la Madeleine will be 19,500 ft. The line is already built across St. Christopher Island, and the projected extension is from that point to Cap de la Madeleine. (Mar., pg. 378.)

Toronto Civic Ry.—We are officially advised that work on the Lansdowne Ave. line was completed July 20, except the diamond and interlocking installation with the Toronto Suburban Ry. at Davenport Road. Now that the change in gauge of the T. S. R. has been approved of the diamond will be put in when the latter work is undertaken.

The construction of a 9-car addition to the civic car barn, St. Clair Ave., is being built, Chalkley & Sons being the contractors. (Aug., pg. 338.)

Toronto Suburban Ry.—A Toronto press report stated recently that the company had decided, owing to the difficulty in obtaining copper for overhead work, to operate the extension from Lambton to Guelph, by steam, commencing Oct. 1. We are officially advised that nothing of the kind is contemplated. The company has not the power to operate its railway by steam, but when the right of way was purchased, a clause was inserted in the various agreements, to the effect that those selling the land would raise no objection should it be deemed desirable to operate by steam. The line between Toronto and Lambton is on the public highway and is 4 ft. 10 in. gauge, while the extension from Lambton to Guelph is on

private right of way, and is standard gauge. The Ontario Railway and Municipal Board has authorized the change of gauge to standard, on the city end, but it is not conceivable that steam operation on the public highway would be permitted.

The Western Canada Power Co., which owns the charter of the New Westminster and Boundary Ry., completed arrangements for a reorganization of its finances Sept. 1. Under the new arrangements the security of the bondholders is unimpaired, and the noteholders have provided \$100,000 of capital. Practically all of the noteholders have agreed to allow their notes to remain on deposit with the reorganization committee.

The Windsor, Essex & Lake Shore Rapid Ry. has been authorized by the Board of Railway Commissioners to build a spur for Champion Brick & Tile Co. in Gosfield North Township, Ont.

Some paving is being done by the company in Leamington and Windsor, Ont. (July, pg. 295.)

Winnipeg Electric Ry.—The Manitoba Public Utilities Commission has refused to grant a hearing to the Winnipeg City Council's application for an order to compel the company to build a temporary car line on Sargent Ave. from Arlington St. to Wall St.

We are officially advised that there is under construction by its subsidiary, the Winnipeg, Selkirk and Lake Winnipeg Ry., 1.5 miles of single track line with gravel ballast, from the city limits of Winnipeg to Kildonan Park, which will make the line a double track line. (Sept., pg. 378.)

Guelph Radial Ry., which is owned by the city of Guelph, Ont., has advanced its conductors' and motormen's wages to the following rates, per hour: 1st year, 21c; 2nd year, 22c; 3rd year, 23c. This is practically an increase of 1c an hour, except for the first three months service, which was formerly 19c and the remainder of the year 20c, the second year having been 21c and the third year 22c. The men are working 68 hours a week, six days to the week. The company supplies one new uniform a year, together with buttons and caps.

Niagara River Bridge.—A bill has been introduced in the U. S. Congress to authorize the building of a second bridge across the Niagara River at Buffalo, N.Y., to take care of pedestrian, vehicular and street railway traffic. E. C. Connette, President International Ry., Buffalo, N.Y., is interested. The bill has been introduced, it is said, following the failure of negotiations with the G.T.R. for the widening of the present International Bridge so as to take care of the general traffic.

Pennsylvania Rd.'s Detroit Extension.—President Rea of the Pennsylvania Rd., states that the announcement of the proposed extension of the Pennsylvania into Detroit, Mich., had brought out misleading conjectures as to the plans and cost. A direct connection with that city had been under consideration for some years, but the recent industrial development there has been such as to make this extension of the company's service necessary. This does not, however, mean the construction of 80 miles of new line, as has been said, nor the expenditure of \$40,000,000. The capital outlay will not exceed \$10,000,000.

Marine Department

The Dominion Government Asked to Start Ocean Steamship Building.

J. G. Scott, President, Quebec Board of Trade, and formerly General Manager, Great Northern Ry. of Canada and Quebec and Lake St. John Ry. has sent us copies of correspondence between himself and the Minister of Trade and Commerce. The first letter was written by Mr. Scott on behalf of the Board on May 17, as follows:

The Council of the Quebec Board of Trade have followed with much interest the recent debate in Parliament on the question of ship building in Canada, in which you outlined an approximate idea of a method of encouraging the building of steel ocean going steamships in Canadian shipyards and their operation by Canadian owners. We understand that your plan would be for the Government to pay as a bonus the difference between the cost of building such vessels in Canada and that of building them in shipyards in the United Kingdom, and also a guarantee of subsidy to represent the difference between the cost of navigating vessels as built by Canadian owners, as compared with the cost of navigating under British ownership. We do not know if we have correctly understood the meaning of your speech, but it would seem to us that the question is so urgent that some such policy is necessary in the interest of the country; because, at present our export trade is simply prohibited by the high rates of ocean freights. For instance, in the deal trade, which interests equally Quebec and St. John, N.B., the present rate of freight is six times what it is under normal conditions, and the freight is thus far greater than the value of the lumber.

We presume that if such a policy were to be determined upon, it could not be put into force until after next session of Parliament. And in any case, if the cost of building ocean steamers in England now is so much greater than before, as the recent debate in Ottawa would indicate, might it not be difficult to induce Canadian builders to build until the termination of the war will have given them some idea as to what conditions will prevail for the future? In the meantime, the great and rapidly increasing export trade of Canada is almost at a standstill for want of ocean tonnage. The Northwest raised last year 700,000,000 bush. of grain, Montreal exported less than 40,000,000, no less than 105,000,000 went to Buffalo and thence to United States seaports, and many million bushels of grain in the Northwest are exposed to loss or injury for want of storage. Is it not therefore most urgent that the Government should take some decided steps to remedy this alarming condition of affairs?

The Quebec Board of Trade has urged for the last three years that grain storage should be built at Quebec, Halifax and St. John for at least 10,000,000 bush. at each place, so as to fully utilize the new means of transporting western grain to the seaboard offered by the National Transcontinental Ry., and thus give constant grain traffic to the railway, which the recent declaration of the Minister of Railways proves that it can profitably carry at 3c a bush. cheaper than the rates in force on the lake and rail route.

The question of ocean tonnage seems

to be equally important. Why should we not build and own and operate our own ships, as we did 40 years ago, when Canada stood fourth on the list of ship owning nations? Today, we are nowhere. Then, the ships of Quebec, St. John, Yarmouth, Charlottetown and Halifax, manned by Canadian captains and crews, were well known in every port in the world. Our merchants were ship owners and our people were mariners, and both were drawing revenue from the greatest source of revenue, which does not appear in the Government statistics, viz., ocean freights. One firm in Quebec had, at that time, nearly 100 ships in service. All that has gone. Why should it not be revived, and why should we not build steel vessels, as we formerly built wooden ones? We are able to build costly railways, great bridges, and railway cars and to make steel rails. Why not ships?

The Government is just completing, in the port of Quebec, the largest dry dock in the world, capable of docking the greatest steamship afloat, and therefore more than large enough to secure safety and repair to the largest steamships now using the St. Lawrence, some 20 of which are now without the means of repair in case of accident, being too large for existing docks. When this dock is finished, in six months from now, it will be necessary to keep a staff of experienced shipwrights and riveters there, so as to repair vessels in case of mishap. These men must have constant employment, or they will not remain. Between this dock and the smaller Government dry dock, adjacent, there is a ship building yard, where the Davie Ship Building and Repairing Co. have in the last few years built a number of steel river steamships. The workmanship on which has been declared by experts to be as good as any done on the Clyde. They are now building a large steel train ferry steamship for British Columbia, and a fleet of launches and small craft. Some 1,800 men are thus employed, who, when the war is over, will be out of work, unless, in the meantime, some arrangements can be made for building ocean steamships.

So as to give work to these men, as well as to the steel working staff who will have to be kept at the new dock, we would respectfully suggest that the Government take the initiative in building ocean steamships in Canada, by building say six or more freight steamships of 8,000 to 10,000 tons register, of which 2 might be built at Montreal, 2 at Quebec and 2 in the Maritime Provinces, and, if thought proper, some seagoing vessels on the upper lakes, whose tonnage would of course be much smaller on account of the St. Lawrence Canal locks. An arrangement could no doubt be made with the ship building yards at these points to build these vessels at the actual cost of labor and material, plus say 10%, or any other profit that might be thought equitable. In this way, the Government would establish the cost on which to frame future legislation; would start the movement of building ocean steamships in Canada; would provide a small fleet to help out the transportation problem, which is very acute, would prevent a lot

of men being thrown out of employment when the war is over, would increase the business of our steel works, and would create a valuable industry, which could then be left to private enterprise, aided possibly by some encouragement from Parliament.

Sir George E. Foster's Reply.

The Minister of Trade and Commerce wrote Mr. Scott on May 19 as follows:

In my speech in Parliament I discussed the various methods which had been proposed or might be put forward to mitigate the present difficult conditions of ocean transport, with an endeavor to draw out from the House an expression of opinion as to the best policy to be pursued. After thoroughly considering the matter, the Government came to the conclusion that it was impossible, under present circumstances, to lay down a well considered line of policy for consideration during the session just closed. The matter has been referred to a committee of council who, during the interim, will give it more extended consideration, and, if possible, be prepared at the next session of Parliament to state their intention.

Your Board is well within the mark when they recount the present conditions and urge the necessity for supplying a remedy. The nature of the remedy that could be applied, however, is a difficult matter to decide. Granted a worldwide and increasing lack of tonnage, with almost an unprecedented quantity of products to be transported, and the consequent lack of space and advancing rates, now far away beyond the normal, the question as to how to remedy this state of affairs is not solved in any way by the statement of conditions. To cite the situation years ago when Canada stood fourth in the list of shipowning nations and the situation today, does not bring very much relief. Those were the days of wooden shipbuilding, when Canada had the advantage of most countries of the world in procuring the best of lumber and of easy access to the seaboard, where inexpensive yards and plenty of material and cheap labor created an ideal situation for shipbuilding. But of course the wooden vessel has gone and its place is now taken by steel vessels and, in the main, by steel vessels of very large carrying capacity.

If shipbuilding is to be revived, it must be in the form of steel ships and for the building of these, very expensive yards are required, skilled labor to a large extent and accessible material. At present our steel shipbuilding yards are few in number and, in the main, congested with work, whilst on the other hand, labor is scarce and the skilled portion of it largely diverted to war purposes. The steel material is at peak prices and under the present conditions requires months, if not years, before an order presently given can be filled. On the other hand, whilst at this present moment tonnage is scarce and freights are high, no one knows how soon peace may come, and when it does come no one knows just what will be the effect upon tonnage and rates.

Anyone can guess, and some people may give a studied opinion, but all are liable to contingencies. So far as en-

quiries have gone, we could not get a contract for steel ships very much less than from \$125 to \$135 a ton and nowhere in Canada could we get the steel for the building and no place in the United States, under eight or ten or more months for delivery. This brings it about that the delivery of ships built under these conditions could not be guaranteed, if orders were given at once and construction gone on with as rapidly as possible, until the middle of 1917 or later. What conditions would be met with in the ocean carrying world at that time nobody knows. If peace were to ensue the interned tonnage turned loose and the necessities of army convoys and munition and supply carrying were done away with, the builder of these ships, be it Government or individual, would find himself with the most costly construction thrown into competition with the released tonnage of the world, and a corporation, and still less a Government, does not wish to face that contingency.

These are some few of the considerations hurriedly thrown together which have to be taken into account in framing a policy for shipbuilding. Coincident with that is one of the most pressing of all conditions, the exceedingly large contributions that must be taken from the country in capital and taxes to sustain the burdens of the war, which are now costing us nearly \$20,000,000 per month. There is a limit to the provision of funds by the methods of taxation; there is also a limit to the borrowing possibilities even of Canada, shut out as it now is practically from every European market.

Please do not consider that, although sending this, I do not sympathise, and very strongly sympathise, with the considerations you have put forth. It is a difficult matter for a Government, as you will quite see, and the best I can say is that they are now giving and will continue to give it their very best consideration.

The Quebec Board of Trade's Answer.

Sir George Foster's letter having been considered by the Quebec Board of Trade, Mr. Scott wrote Sir George Foster on June 19, to London, England, as follows: We still think that it would be wise for the Government to take the initiative and build six or more commercial steamships of 8,000 to 10,000 tons each, say, two at Montreal, two at Quebec, and two in the Maritime Provinces, on the basis of the cost of labor and material plus a reasonable percentage for the builder. By doing this, they would introduce an element of competition and at same time establish a basis of cost to guide them in the legislation necessary to establish this most important industry.

We respectfully suggest that it is the government which should incur the risk of building at the present moment, when, as you say, there is uncertainty as to the conditions which will prevail after the war is over. Private capital, as you know, is proverbially timid, and will not take risks until things have settled down. In the meantime, the country is crying out for relief in the way of shipping. Three-fourths of our western grain—the beneficial result of our enormous sacrifices in building three trans-continental railways—was diverted last year to Buffalo and New York because we had insufficient grain storage and ocean tonnage at our seaports. This must be remedied, or the commercial interests which hold together our disjoint-

ed provinces will soon cease to exist.

From a local point of view, what are we going to do after the war is over, with the 6,000 men who are now employed in Quebec in building small war vessels and in making rifles and ammunition, unless some such employment is available?

Building these vessels would not be money thrown away. The government would soon have good value for it, in the ships themselves, which should not cost dearer than those now building in the United States, and probably very little dearer than those building in Great Britain. And in doing this, they would give employment to our own people at a critical time, and help to provide tonnage to stop the alarming diversion of our trade from our seaports.

I enclose a clipping from the New York Herald which shows that the United States shipyards have now on the stocks 368 steel steamships, aggregating more than one million tons, and that there are more than twice the number of ships carrying the Stars and Stripes than there were before the war. If they can do this, with wages for shipwrights in their yards as high as 75c an hour, surely we can do much better, with more moderate scale of wages prevailing in Canada.

In my previous letter I omitted to point out that if building commercial steamers would lead to the building of war vessels, as it probably would, even though we are and hope always to be a peaceful people, there could be no better or safer place for a naval construction yard than the port of Quebec—because it is remote from the frontier, and not exposed to raids or incursions which might destroy vessels building in Montreal, only an hour's run from the border. It is also safe from attack by sea, being nearly 800 miles from the Atlantic, and only accessible through a channel which for many miles is narrow and could be commanded by artillery from both shores of the St. Lawrence, and is, therefore, not so liable to attack by sea as Halifax, St. John, or Sydney would be. Ships under construction in the yards here would be under the protection of the guns of the Citadel. Ships built in the yards adjoining the new graving dock here could be launched or docked in winter, almost as well as in summer, as the river at this point is always open and free from floating ice.

The transportation of steel and coal for these shipyards, from Sydney or New Glasgow, to Quebec, Montreal, Halifax or St. John, need not be considered an obstacle, because it would not cost more than the freight on similar articles from Glasgow to Belfast where the largest shipyards in the world are in successful operation and not much more than the cost of moving these materials from the steel works to the shipyards at Sydney, itself.

For all these reasons, I do hope you will advise the government to respond to the wish of the people and take immediate action in the direction of building ocean steamers in Canada.

The Nova Scotia Steel Co.'s President's Views.

Thos. Cantley, President, Nova Scotia Steel and Coal Co., wrote Mr. Scott recently, as follows:—The completion of the new Quebec graving dock, and the natural and other facilities already existing at your port, would certainly warrant you in assuming that steel shipbuilding, whether mercantile or naval, could be carried out as well at Quebec as

at probably any other port in Canada. Not only, as you point out, would the cost of transporting material from New Glasgow or Sydney to Quebec, be as cheap or from Glasgow or Middlesbrough to Belfast, but as a matter of fact, experience in years past has proved that iron and steel products such as angles, plates, etc., have, and can again be delivered from Glasgow or Middlesbrough to Belfast. This, of course, is due to the fact that domestic railway and coasting rates in the United Kingdom are exceedingly high, while ocean freights to Canadian Atlantic ports are practically on a ballast basis.

Norwegian Vessels to Be Built in Toronto.—An order has been placed with Polson Iron Works Ltd., Toronto, by Hannevig and Johnsen, New York, on behalf of Norwegian parties, for the construction of two steel cargo single screw steamships, for early delivery. They will be of the Frederickstadt type to Bureau Veritas classification, common to the Norwegian trade, with propelling machinery placed amidships. The dimensions will be, length between perpendiculars 251 ft., length over all 261 ft., breadth moulded 43½ ft., depth moulded 22 ft. 11½ ins., and they will be equipped with triple expansion engines with cylinders 20½, 33 and 54 ins. diam., by 36 ins. stroke, 1,300 i.h.p. at 80 r.p.m., and supplied with steam by boilers 14 ft. diam. by 12 ft. long, at 180 lbs. They will also be equipped with 6 cargo winches and the usual pumps and auxiliary apparatus, as well as complete electric lighting plant. The deadweight capacity of each will be about 3,500 tons on 19½ ft. draught.

The Canadian Northern Ry. is building 2 car floats at Port Mann, B.C., for conveying freight cars across Patricia Bay, until the large car ferry which it has decided to build, is ready for service. They were designed by A. Angstrom, Naval Architect, C.N.R., Toronto, and will be 158 ft. long over all, 46 ft. beam over plating, and 48 ft. over wales, and 11½ ft. deep. They will each take 8 large size freight cars. The first one was launched in July. The C.N.R. has bought two whaling steamships, the s.s. Germania and a sister vessel, formerly owned by Canadian Northern Pacific Fisheries, Ltd., which are being changed to make them suitable for towing purposes, and which are to be renamed Chilliwack and Sumas.

Caution to Navigators near Pierre, Miquelon.—The Marine Department has been notified that during August, five vessels were wrecked near Plate Point, Little Miquelon, all during foggy weather. As all of these vessels went ashore at practically the same point, and as others have been wrecked there in the past, it seems probable that there is a definite cause, possibly a current, to which these accidents can be attributed. Until further information is available, mariners should be extremely cautious in this vicinity, especially during foggy weather.

The World's Increased Vessel Tonnage. A press dispatch of Aug. 28, purports to give the decreases and increases of vessel tonnage of the various belligerent and neutral countries for the previous 12 months, and shows a net decrease in tonnage of 1,084,749 tons. Increases shown by Russia, Italy and Norway totalled 223,885 tons, while the other countries showed decreases, the greatest decrease being Germany, 326,946 tons. Great Britain's tonnage decreased 367,037 tons.

Atlantic and Pacific Ocean Marine.

The Harrison Line s.s. Counsellor, bound from Vancouver, B.C., for Liverpool, Eng., is reported to have been sunk, the crew being saved.

Furness Withy and Co. are reported to have placed orders for the building of an additional four steamships. The British Government has also arranged for this company to operate the interned German steamships which Portugal has handed over to the British Government.

The Belgian s.s. Indutimare, which was wrecked on Magdalen Island, Aug. 21, and abandoned, has been salvaged and taken to Port Mulgrave, N.S., with comparatively little damage. She was picked up by the tug Amelia, after having drifted clear of the rocks. She sailed from Newcastle, N.B., Aug. 18, for Calais, France, with lumber. This vessel was listed in England as a total loss.

Maritime Provinces and Newfoundland.

The Public Works Department will receive tenders to Oct. 10 for the construction of a wharf, warehouse and shed, at Gagetown, N.B.

A press report states that the car ferry service between Carleton Point, P.E.I., and Cape Tormentine, N.B., will be put in operation Nov. 1.

A four masted schooner, named Ada Tower, was launched at Port Grenville, N.B., Sept. 2. She is 150 ft. long and 528 register tons, and is to be used in the coast lumber trade.

The s.s. White Sea, outward bound from Three Rivers, Que., with a cargo of lumber, went ashore near St. Peters River, Nfld., towards the end of August, and became a total loss.

The Reid Newfoundland Co.'s s.s. Argyle collided with and sank the s.s. Hump off the entrance to St. Lawrence harbor, Nfld., towards the end of August. The Hump's crew were saved. She was operated on the Fortune Bay service, and had just been overhauled at St. John's.

The Department of Naval Service received recently bids for the purchase of the three masted schooner Burleigh, but as none of them approximated a fair value for the vessel, all were rejected. Halifax interests urged on the Department that in view of the shortage of tonnage at present, she be offered for sale, with the foregoing result.

A Government wharf has been completed at Shelburne, N.S., with 30 ft. of water at its outer end. The wharf extends from the south extremity of the point south of the town, as an earth embankment, for 425 ft., beyond which it is pile work 500 ft. long. The outermost 100 ft. is 80 ft. wide, and the remainder 40 ft. wide. There are two lines of railway track and a freight shed on the outer block, and the whole is lighted by electricity.

A motor vessel is reported to be under construction in Great Britain for use in the Newfoundland fisheries trade. It is of composite construction, 160 ft. long, and equipped with two engines of the 2 cycle polar type, each developing about 350 b.h.p., and a speed of over 13 knots an hour. It is stated that if this vessel is successful, a number will be built and equipped with engines developing about 1,000 h.p. and a speed of 15 knots an hour.

The St. Peters canal, connecting Bras d'Or Lakes with the Strait of Canso, has been reopened after having been closed for over a year pending enlargement and general improvement. It was first opened in 1865, and has been in operation since then without changes. The lock has been lengthened about 250 ft. and a curve has been practically eliminated. The entrance at the south end has been enlarged, and the canal is now available for vessels drawing 17 ft.

A press report states that the Dominion Government has purchased two steamships, the Manhattan and Narragansett, from the Central Vermont Transportation Co., for \$1,000,000. There is no confirmation of this, and the report should not be taken seriously. These vessels were built for operation between New York and Providence, on the completion of the Southern New England Ry. line from Palmer, Mass., to Providence, R.I., which has been delayed. The question of the operation of these vessels with others of the same company was before the Interstate Commerce Commission recently, under the Panama Canal Act, and the permission to operate was granted. All the companies named are subsidiary to the G.T.R.

Province of Quebec Marine.

The J. G. Rene Transportation Co. Ltd. has been incorporated under the Quebec Companies Act, with authorized capital of \$20,000 and office at Montreal, to carry goods by all means of transportation, and

in connection therewith to own and operate all kinds of boats and vehicles, with or without motive power, on land or sea. J. G. Rene, Y. Dupre, L. Gelinas, H. Bourassa and L. Gauvin, Montreal, are the incorporators.

Ontario and the Great Lakes.

Northern Navigation Co. employees have contributed \$50 to the Port Arthur Red Cross Fund.

The Department of Public Works received tenders to Sept. 22 for the construction of an extension to the west breakwater at Port Stanley.

The Farrar Transportation Co. Ltd., Toronto, has been authorized to increase its capital stock from \$250,000 to \$1,000,000, by the creation of 7,500 shares of new stock of \$100 each.

The Canada Shipping Co.'s s.s. John B. Ketchum 2d, was damaged, Sept. 12, in collision with Wilson Paterson Co.'s s.s. Senator Derbyshire, while entering the harbor at Port Colborne.

A vessel has been completed at East Trenton, for navigation on the Trent Valley canal. The propelling power consists of two 20 h.p. gasoline engines driving twin propellers.

The Dominion Government dock at Windsor is reported to have been leased to the Detroit and Cleveland Navigation Co., for the winter, for the berthing of a number of the company's vessels.

The steam tug Thomas Freel Battle, owned by J. Battle, St. Catharines, which was sunk in the Detroit River, near Walkerville, some time ago, has been raised and taken to Sarnia for repairs.

The Mathews Steamship Co.'s s.s. Masaba grounded on Grassy Shoal, Lake Superior, Sept. 3, and was floated Sept. 6 and taken to Port Arthur for repairs. It is stated that 28 plates in the bottom of the hull were damaged.

The steamboats Agwinde and Keenora, formerly owned by the Rainy River Navigation Co., Fort William, are now owned by the Rat Portage Lumber Co., and are lying at Kenora on Lake of the Woods. They have not been operated this year.

The Northern Navigation Co.'s s.s. Saronic, which was burnt at Cockburn Island, Georgian Bay, Aug. 21, is reported to have been sold to W. Schlosser, Milwaukee, Wis., and it is said that the wreck will be towed there and rebuilt.

The Imperial Oil Co.'s s.s. Iocolite, which has been built at Collingwood,

*Formerly a steamer.

sailed from there, Sept. 16, for Sarnia, on her maiden trip. This is the second of three vessels being built at Collingwood for the company. The third will be launched shortly.

The Marine Department is building a new lighthouse on Burnt Island in the Thousand Island district of the St. Lawrence River. It replaces a former gas beacon on the east side of the island, and consists of a rectangular wooden building, with a light of the dioptric type at an elevation of 64 ft., visible for five miles.

The Keystone Transportation Co.'s s.s. Keybell, which ran aground at Mrgan's Point, near Port Colborne, during a heavy fog, Sept. 7, while bound to Montreal with coal, was released Sept. 10 after having had her cargo lightered. Practically no damage was sustained, and after reloading her cargo she proceeded to her destination.

The Dominion Government has awarded contracts for harbor improvements at Port Stanley, which will cost in excess of \$100,000. As the present west pier protecting the ferry slip docks threatens to collapse, and the need is very urgent, work will be undertaken at once, and will be carried on through the winter as far as weather conditions permit.

The United States Lake Survey reports the levels on the Great Lakes in feet above mean sea level, for August, as follows: Superior 603.73; Michigan and Huron 581.04; Erie 572.80, Ontario 247.36. Compared with the average August levels for the past ten years, Superior was 1.16 above, Michigan and Huron 0.21 ft. above, Erie 0.20 ft. above, and Ontario 0.87 ft. above.

The s.s. Topeka, which was sunk by the s.s. Christopher, Aug. 15, in the Detroit River, near Sandwich, lies in about 30 ft. of water about 800 ft. from, and abreast of the lower end of the Mullen coal dock at Sandwich. The spars and cabin of the wreck are showing above water, and it is lighted at night by two white lanterns. It constitutes a menace to navigation, but there is ample room for passing vessels.

The Dominion Government hydrographic survey steamship, La Canadienne, was driven ashore at Dorion, Lake Superior, Sept. 17. Considerable bottom damage was sustained, but it is anticipated that she will be salvaged. She was built at Glasgow, Scotland in 1880, and was screw driven by engine of 60 n.h.p. Her dimensions are, length 154.3 ft., breadth 22.7 ft., depth 10.9 ft., tonnage 372 gross, 227 register.

The U. S. Federal Court at Chicago, Ill., which issued a temporary restraining order to prevent the contemplated sale of nine steamships owned by the Great Lakes and St. Lawrence Transportation Co., to the French Government, has permanently enjoined the company from so selling its vessels. The Scranton Coal Co. stated that it had a three year contract with the company for the transportation of coal from Oswego, N.Y., to Milwaukee and Chicago, and that the company had not only stopped taking the coal, but had sent its vessels to Montreal preparatory to completing the sale to the French Government. It was held that the company is bound by the contract to carry the coal regularly for three years.

The ice breaking ferry steamboat, St. Ignace, owned by James Whalen, Port Arthur, and registered in the U. S., was destroyed by fire, Aug. 30, while in the dry dock for repairs. She was built at Detroit, Mich., in 1888, and was of oak with diagonal strapping on the frames,

and with bottom sheathed with iron for winter service. Her dimensions were, length 215 ft., breadth 52 ft., depth 16 ft., tonnage 1,199 gross, 600 register, and she was equipped with fore and aft compound engine with cylinders 28½ and 53 ins. diam., by 48 ins. stroke, 855 i.h.p. at 85 r.p.m., and supplied with steam by 3 Scotch boilers 11½ by 18 ft. at 127 lbs. She was run for many years in the Straits of Mackinac, and was occasionally used in opening the St. Marys River above Sault Ste. Marie.

The Davidson and Smith Elevator Co., Fort William, is arranging to purchase the s.s. Caledonia from the Massey Steamship Co., Duluth, Minn., to replace the s.s. Panther, recently purchased from the same company, and which was lost in collision with the Pittsburg Steamship Co.'s s.s. James J. Hill a few weeks ago. The Caledonia was built at Marine City, Mich., in 1888, and originally named W. B. Morley. She is of oak with diagonal strapping on frames, and wooden boiler house, and is equipped with fore and aft compound engines with cylinders 24 and 44 ins. diam., by 42 ins. stroke, supplied with steam by two Scotch boilers 10 by 11 ft., under induced draught, at 180 lbs. Her dimensions are, length 277 ft., breadth 42 ft., depth 21 ft.; tonnage, 2,197 gross, 1,509 register.

Manitoba, Saskatchewan and Alberta.

The s.s. Goldfield, registered as owned by the Phoenix Brick, Tile and Lumber Co., Ltd., Winnipeg, was offered for sale by public auction at Winnipeg, Sept. 16, under a mortgage deed, subject to a reserve. She was built at Selkirk, Man., in 1912, and was screw driven by engine of 13 n.h.p. Her dimensions are, length 75.4 ft., breadth 15.9 ft., depth 6 ft., tonnage, 56 gross, 38 register.

British Columbia and Pacific Coast.

The Western Shipping Co., Vancouver, is reported to have purchased the s.s. British Columbia from H. F. Bullen, Victoria, for \$95,000, for operation to Vladivostok, Russia.

The Border Line Transportation Co. has increased its service to British Columbia ports, the vessels Edith, Fulton, and Wakena, calling at Victoria, Vancouver and Powell River, as well as other ports, every three days.

Navigation on the upper Yukon River is practically closed for the year. The last steamboat left Dawson for Fairbanks Sept. 24, and the last boat from Dawson for White Horse is scheduled to sail Oct. 10.

The Canadian Fishing Co., Vancouver, has purchased the steamships Canada and Imbricaria from the liquidator of the British Columbian Fisheries, Ltd., for the halibut fishery trade. They have been removed from Skidegate Inlet to Vancouver, where they are to be overhauled and remodelled.

The C.P.R. s.s. Princess Maquinna, was hauled out at Victoria, early in September for survey, after touching bottom on an outlying reef off Bowen Island. While she is laid up, a number of minor repairs will be carried out. The s.s. Princess May has taken her place on the Vancouver-Granby run temporarily.

The s.s. Queen City, formerly owned by the C.P.R., which was burned recently at Victoria, is in the hands of the underwriters for disposal. She was built at

Vancouver in 1894, and was screw driven by engine of 34 n.h.p. Her dimensions were, length 116 ft., breadth 27 ft., depth 10 ft., tonnage 391 gross, 244 register.

The Marine Department's buildings on the Songhees Indian Reserve at Victoria have been completed, and the department was expected to take them over from the contractors, Parfitt Bros., during September. The wharf and store shed were completed and taken over some time ago, and the finishing of the buoy and carpenter shops completes the contract.

The Ship Drummur Co., Ltd., is being voluntarily wound up. The Drummur was one of the best known sailing vessels on the coast, and was of the four masted type with iron hull, and 1,844 register tons. She was built at Liverpool, Eng., in 1882. Soon after the declaration of war in 1914, when a number of German vessels were running riot in the Pacific Ocean, she was sunk by the cruiser Leipzig.

The Grand Trunk Pacific Coast Steamship Co.'s schedule from Oct. 16 to Dec. 21 covers the operation of the steamships Prince George and Prince Rupert on the Seattle, Victoria, Vancouver, Ocean Falls, Prince Rupert, Anyox and Alaska route, and the Prince John on the Vancouver, Surf Inlet, Prince Rupert, Queen Charlotte Islands, Anyox, Alice Arm and Stewart service. On the arrival of the Prince John at Prince Rupert, Dec. 29, she will remain at that port to take up the Alaska route from Jan. 3, 1917. The service first mentioned above will be taken from Dec. 25 to March 28, 1917, by the steamships Prince George and Chelohsin or Venture, and the Prince John fortnightly from Jan. 3. The s.s. Prince Rupert will be berthed for the remainder of the winter on the completion of the trip from Vancouver, Dec. 21. The s.s. Prince John will also perform the service from Prince Rupert to Queen Charlotte Islands, Anyox, Alice Arm and Stewart, alternately with the Alaska service, from Jan. 10.

Canadian Vickers, Ltd., placed on the market recently at par, an issue of £1,000,000 6% first mortgage registered debentures, redeemable at 103 in 25 years by means of a half yearly cumulative sinking fund of 2% per annum, all unconditionally guaranteed as to principal, interest, sinking fund and premium, by Vickers, Ltd. The sinking fund will be applied half yearly in redeeming debentures in the market at not more than 103, or by drawings at 103, the first redemption to take place by Aug. 1, 1917. The company may redeem at 103 on any interest date after Feb. 1, 1921, in whole or in part, on six months notice. Any debentures not redeemed by Aug. 1, 1941, will be payable at 103, or on the security becoming enforceable. The issue was considerably oversubscribed.

Failure to Sound Fog Horns.—Masters of vessels have made complaint through the Dominion Marine Association, as to the failure on the part of certain light keepers at the east end of Lake Ontario, to sound their horns. The Marine Department has taken the matter up and has notified the light keepers that further default will be considered serious.

Furness, Withy & Co., by the acquirement of the Prince Line, Ltd., and its 42 steamships, are now said to control the largest cargo and cargo liner fleet in the world, the dead weight capacity being estimated at from 1,250,000 to 1,500,000 tons.

Mainly About Marine People.

N. A. Rule, heretofore Assistant to Operating Manager, Canada Steamship Lines, Ltd., Toronto, has been appointed Secretary, Standard Shipping Co., Winnipeg.

P. S. Laing, heretofore agent, F. Waterhouse & Co., steamship managers, at Vancouver, B.C., has been appointed General Freight Agent, same company, at Seattle, Wash.

R. M. Pedgen, of Toronto, who was second officer on the Canada Steamship Lines s.s. Chippewa, prior to enlisting in 1914, is in a hospital in France suffering from a fracture. He was previously wounded in April by shrapnel.

Col. G. P. Murphy, Vice President, Ottawa Transportation Co., who is in the Canadian Army Service Corps, and who has been in England for some time, has been appointed Quartermaster General and graded as a General Staff Officer, First Grade.

Capt. F. L. Davison, formerly master of the C.P.R. Company's s.s. Monteaule, and latterly master of the s.s. Empress of Japan, has been appointed Assistant Marine Superintendent, Canadian Pacific Ocean Services, Ltd., Vancouver.

J. B. Morris, heretofore chief engineer, Great Northern Pacific Steamship Co.'s s.s. Great Northern, has been appointed Marine Superintendent for the company at Portland, Ore., vice C. W. Wiley. He has specialized in the operation of the steam turbine.

W. S. Baker, who died in August as the result of wounds received in France, was the second son of W. Baker, Travelling Representative of the White Star-Dominion, and American Lines, and was himself, about four years ago, acting as Canadian conductor to parties travelling

in the Dominion, on behalf of the White Star-Dominion Line.

Capt Gow, heretofore Marine Superintendent, Dollar Steamship Co., has not, we are officially advised, been appointed Superintendent of Loading, Canadian Pacific Ocean Services, Ltd., Vancouver, B.C., as reported. He is now reported to have been appointed Marine Superintendent, Canada West Coast Navigation Co., which is having a number of auxiliary power sailing vessels built for the coast lumber trade.

Stranding of the s.s. Fernfield.

An investigation into the stranding of the British s.s. Fernfield, on Battery Point, Louisburg, N.S., July 4, was held at Halifax, recently, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander E. Wyatt, R.N.R., and Capt. A. Cuthbert, as nautical assessors. From the evidence adduced the court found that from the time the vessel left St. John, N.B., on July 1, until it reached Louisburg light, the master exercised all the necessary and proper precautions in navigating, but in that neighborhood, under the weather conditions existing, he omitted to include in his calculations the possible influence of wind on his starboard, in heading for the light on the wharf, and also that in turning around close to the buoy, a mistake was made. It therefore found that he erred in judgment, but not in a culpable manner, and therefore did not deal with his certificate, nor reprimand him, but cautioned him to be more careful in the future, in entering harbors with which he is not well acquainted. The logs were examined and found properly kept and supervised.

Canada Steamship Lines Notes.

J. A. Greiner has been appointed Mechanical Superintendent, vice R. Duguid resigned. Office, Montreal.

The Northern Navigation Co. during the past navigation season provided a hostess on each of its five principal passenger steamships to receive passengers and to help in making the trips enjoyable.

N. A. Rule, Assistant to the Operating Manager, having resigned to become secretary of the Standard Supply Co., Winnipeg, his former position has been temporarily abolished, and A. E. Stinson has been appointed acting dispatcher, Toronto. He was entertained to lunch at Toronto, Sept. 9, by his associates, and presented with a gold fountain pen.

In our last issue a paragraph relating to the sinking of the s.s. Topeka by the s.s. Christopher in the Detroit River, near Sandwich, Ont., was placed among other paragraphs under this heading, owing to a mistake in "making up." Neither of the vessels mentioned is owned by Canada Steamship Lines, Ltd.

A dividend of 1 3/4% has been declared on the preferred stock, payable Nov. 1 to holders of record on Oct. 2. There are still some arrears of dividend due, approximating 10 1/2%, and press reports state that it is probable that early in the new year a payment of about 7% will be made on this account.

The s.s. W. C. Moreland, which is being rebuilt at Superior, Wis., will, when completed, be renamed Sir Trevor Dawson, and operated by the American Interlake Line, a subsidiary of Canada Steamship Lines Ltd. She will be retained on the U. S. register. A preliminary description of the rebuilding work was given in our last issue, page 384.

It is announced that the voting trust which was organized on the consolidation of the various companies forming Canada Steamship Lines Ltd., and which was to expire in 1919, has been extended for a further 10 years. It has been thought prudent by the British and Canadian interests at present in control to ensure the perpetuation of the present management for that time.

The Hamilton Shipbuilding and Ferry Co., a subsidiary of Canada Steamship Lines, operating the ferry service out of Hamilton, has applied to the Hamilton City Council, for an extension of its lease of Wabasso Park, where it proposes undertaking a number of improvements to the amusement section, as well as to the general ferry service. It is stated that the company may also build a dry dock at Hamilton. The company was incorporated under the Ontario Companies Act in May, with an authorized capital of \$100,000, and office at Hamilton, and J. G. Gauld as President.

The American Association of Port Authorities held its annual meeting at Montreal, Sept. 15, when papers were read and other matters concerning the administration of ports were discussed. W. G. Ross, Chairman, Montreal Harbor Commissioners, was re-elected President for the current year. The delegates attending the meetings were entertained by the Shipping Federation of Canada, and the Montreal Harbor Commissioners.

A concrete ship has been built at Christianiafjord, Norway, recently. Apart from the ribs, the hull is entirely of concrete. This combination will, it is said, resist damage better than steel or wood.

Canadian Lake Protective Association.

Casualties to vessels enrolled in the Canadian Lake Protective Association, during 1915, all more or less of a minor nature, have been dealt with at various meetings of the committee this year. One of the casualties dealt with, revived the discussion of the danger arising when a signal from the bridge to the engine room is misunderstood and simply repeated. The second and subsequent signals are often interpreted in the engine room as a demand for the same action the engineer has taken after the first signal. It is urged by experienced masters that in every case where it is apparent that a signal has been misunderstood, the officer on the bridge should at once signal an alarm by a rapid movement and ringing of the Chadburn apparatus, and then repeat the correct signal. The mistake will then be noticed and corrected promptly, and when the vessel is in close quarters, much damage may be avoided.

In one of the cases of grounding, it was made clear that no vessel under the conditions then existing should attempt to enter Harbor Beach, Lake Huron, if drawing more than 16 or 17 ft. The Lake Carriers Association has been asked to make some effort with a view to having the U.S. authorities improve the harbor so that it may be available as a refuge at all times. The association's committee decided to take no further action for the time being with reference to the proposed double courses, east and west of Caribou Island in Lake Superior, as opinion generally was against the proposal.

In view of the risk of damage and delay from fire as exemplified in one of the casualties, the committee resolved that smoking be prohibited in the sleeping quarters of all vessels, and instructions were given accordingly to all members to instruct masters to see that the rule is strictly observed.

The recommendation of the Great Lakes Protective Association that no vessel should attempt to pass another in the shallow and narrow channels between the lower end of Port Huron middle ground and the Corisca Shoals lightship, and between the upper end of Russell Island

and the lower end of St. Clair Flats canal, was adopted.

Attention may be called to the very good record of the vessels enrolled in the association. In a total of 116 accidents for the first half of this year, only 6 affected vessels in the association.

The Quebec Shipbuilding and Repair Co. Ltd., which was incorporated recently with office at Montreal, has an authorized capital of \$40,000. It has leased the dock at the Island of Orleans from Le Chantier Maritime de St. Laurent Ltee., with the intention of building wooden schooners there. The company's officers are, James Playfair, Midland, Ont., President; R. A. Carter, Montreal, Vice President and Managing Director; M. P. Connolly, Quebec, Que., Second Vice President; and G. A. Wood, Montreal, Secretary-Treasurer; James Playfair is President and Managing Director, Great Lakes Transportation Co., and was formerly connected with a number of navigation companies, now concentrated in Canada Steamship Lines Ltd.; R. A. Carter and G. A. Wood are insurance brokers in Montreal, the former having been at one time in the Richelieu and Ontario Navigation Co.'s service; and M. P. Connolly is Canada Steamship Lines' agent at Quebec. In addition to these, E. S. Farley, a yacht broker, Chicago, Ill., is a director.

Suggested Car Ferry Service for the North Sea.—The Swedish State Railways management is making enquiries regarding the possibility of establishing a daily ferry service across the North Sea, between Gothenburg, Sweden, and some port in England. Ferries with a displacement of about 11,000 tons are suggested, of which four would be required for service and an additional one for reserve. The distance would approximate 500 miles. It is highly improbable that any negotiations will be carried on seriously while the war continues.

The International Joint Waterways Commission held a meeting at Ogdensburg, N.Y., at the end of August for further discussing the pollution of boundary waters, evidence being taken with special reference to the pollution in the Thousand Island district.

Quebec Transportation and Forwarding Co. Changes Ownership.

The Quebec Transportation and Forwarding Co. has passed from the control of the original directorate to one representing United States interests, and is being managed by the Canada Shipping Co., Ltd., Montreal. The Quebec Company was originally incorporated under the Dominion Companies Act, April 2, 1906, with an authorized capital of \$145,000, and office at Quebec, Que. The company was practically a close corporation, the directorate being J. S. Thom, President; M. J. Hackett, Vice President; W. J. Hackett, Manager, and L. Thom. The company owns three steam tugs, Florence, J. H. Hackett and Margaret Hackett, and five barges, A. D., F. D. Ewen, Gladys H., Katie H., and Zapotec. The new officers of the company are: T. Dougherty, New York, President; F. A. Augsbury, Pyrites, N.Y., Vice President, and G. J. Madden, Montreal, Secretary and Manager.

The Canada Shipping Co., Ltd., was incorporated under the Dominion Companies Act Feb. 24, 1910, with an authorized capital of \$20,000 and office at Montreal. H. Munderloh, Montreal was chiefly concerned in the business, which was chiefly a commission and chartering one. He sold his interests in 1915 to T. Dougherty & Co., New York, who operate in conjunction with Duthie and Madden, Montreal. The company owns the s.s. John B. Ketchum 2nd, originally owned by the Spokane Steamship Co., Port Huron, Mich., and during this year also operated the steamships Cabotia, Comp-ton and Robert R. Rhodes. The officials are, T. Dougherty, President; W. N. Duthie, Vice President, and G. J. Madden, Manager.

Suggested Suspension of Coasting Laws.—An application was made recently by parties interested in the lumber business, to obtain a suspension of the coasting laws on the ground that Canadian vessels were not available for freighting from north shore ports in Lake Huron to the south end of Georgian Bay. The Government consulted the Dominion Marine Association on the matter. Few vessels belonging to the association are of a class which could engage in this traffic and the vessels in this trade in former years are still on the lakes and available at present going rates. The lumber trade is of a special nature and the route mentioned is well served by railways, but the association relied on its repeated protests against interference with the coasting laws, and apparently the Government decided that no sufficient reason had been shown for interference.

Merchant Service Certificates and Aliens.—It is announced that the British Board of Trade has decided that during the war every applicant for masters' and mates' certificates must be a British subject, and also that at the time of his birth, both of his parents must have been British subjects. The Dominion Government has not adopted this regulation, but is following its usual practice and admitting British subjects to its examinations.

The Pacific Port Authorities held their third annual convention at Vancouver, B.C., Sept. 4, when a number of papers and matters generally affecting shipping on the Pacific coast and ocean were discussed. During the visit, the harbor was inspected, together with the various improvement works in progress in the vicinity.

Canadian Pacific Ocean Services Ltd., and the Allan Line.

The C.P.R. report for the year ended June 30, contains the following paragraph: "In consequence of the extraordinary conditions created by the present war your directors considered it advisable to postpone the effective date of the agreement entered into between your company and the Allan Line Steamship Co. and the Canadian Pacific Ocean Services, Ltd., authorized by resolution passed at the last annual meeting, for the acquisition by the last named company of the capital stock of the Allan Line now held by your company and of the vessels of your company named in the resolution. Your directors have, however, thought it desirable to enter into an agreement with the Canadian Pacific Ocean Services, Ltd., under which the vessels of both fleets are operated by that company as managers and agents. In view of possible changes in the conditions pertaining to ocean traffic, your directors consider it may be advisable, in your company's interests, that in giving effect to the proposals previously approved a somewhat different plan should be adopted, and a resolution will be submitted granting authority to your directors to carry out the transaction with the C. P. Ocean Services or some other company created for that purpose, of which company your company will have full ownership and control in such manner and on such terms as seem to them proper. The revenue from your steamships given in the statement of special income is exclusive of an amount transferred to the reserve account to cover the cost of replacing ships sold or destroyed, and of a sum sufficient to meet any tax on excess profits that may be ultimately payable."

Summer Deck Loads of Wood Goods.—The Marine Department has notified the Dominion Marine Association that the British Board of Trade has decided that it will not institute proceedings under sec. 10 of the Merchants Shipping Act, 1906, against masters or owners of vessels arriving in United Kingdom ports between Oct. 31 and Nov. 15, or between Mar. 30 and Apr. 16, with deck cargoes of light or heavy wood goods under other conditions than those allowed by that section, it being understood that the responsibility of masters and owners for ensuring safe and proper loading remains unaffected by the concession. This is an extension of the period for summer deck loads of wood goods, and collectors of customs in Quebec and the Maritime Provinces have been instructed to clear vessels with summer deck loads, for the United Kingdom, up to Nov. 7, and also on and after Mar. 1, 1917, if sailing vessels, and on and after Mar. 12, 1917, if steamships.

The Dominion Government Dredge for St. Lawrence Ship Channel, described in Canadian Railway and Marine World for September, was designed by William Simons & Co., of Renfrew, Scot'and, and not by Charles Duguid, Naval Architect, Marine and Fisheries Department, as stated, owing to an error in this office. The construction of the dredge has, however, been supervised by Mr. Duguid.

The recommended draught for vessels for Lake St. Clair and Lake Erie ports, was reduced 2 in. by the Lake Carriers' Association, Sept. 15, the draught now being 20 ft. 3 ins. The recommended draught for the Sault canals, is 20 ft. 4 ins.

Stranding of the s.s. Fremona Investigated.

Judgment was rendered at Quebec, Aug. 30, re the stranding of the British s.s. Fremona on Anticosti Island, in the St. Lawrence, on July 31. The enquiry was conducted by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander Elliott, R.N.R. and Capt. J. Murray. The court's finding is summarized as follows: The court again faces a situation which seems to predominate lately, viz., an attempt to navigate the St. Lawrence on pure assumption. The master acknowledged that he had read the sailing directions and expected to meet currents flowing in a different direction to what was shown on the chart, yet with that knowledge and information he kept his vessel at a speed which cannot be considered as moderate within the meaning of the rule formulated by the Board of Trade regulating the speed of vessels in thick, foggy weather. He has navigated these waters numerous times and is aware of the peculiarities obtaining in other parts of the world as well as here. The court is of opinion that owing to the various warnings given in the sailing directions of the vagaries of currents which may be encountered in the St. Lawrence, the master did not exercise proper prudence, or precautions, so far as speed, compass courses and soundings were concerned. After carefully reviewing all the evidence, the court is of opinion that the master, Arthur Melling, was derelict in carrying out the responsibilities of a master, and greatly erred in judgment in failing to adopt the measures of prudence and caution called for in a forcible manner by the sailing directions which indicate the various elements which tend to throw vessels off their courses in the St. Lawrence. Following the policy which has been followed hitherto, owing to conditions which the war has brought about, occasioning a dearth of masters, the court will not deal with his certificate but reprimands him severely for his lack of caution, prudence and seamanlike carefulness. The court cannot censure the officers then on watch as the master is held responsible, he being on the bridge at the time of the disaster.

British Criticism of the Wreck Commissioner's Judgments.

Reports from England state that the Mercantile Service Association is interesting itself in the case of the stranding of the British steamship Middleham Castle on Matane Reef, Que., July 27, and which was enquired into by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. F. Nash and J. O. Grey as nautical assessors, Aug. 3, at Montreal. It is stated that the association has communicated with the Marine Department at Ottawa with the object of having the case reviewed and the judgment modified, which it considers is an undeserved reflection on the competency of the master of the vessel.

It would appear from the number and the nature of the criticisms of the Wreck Commissioners' judgments, mostly emanating from the Liverpool Journal of Commerce, which is closely in touch with the Mercantile Service Association, that they are launched as a matter of course after the delivery of the judgment, and are made without proper appreciation of facts. The animus displayed in many of

that journal's criticisms is so unreasonable as to discount any good it might do where the circumstances of a particular case make it desirable that the details be reviewed. For a number of years, during which the position of Wreck Commissioner has been held by three different individuals, each of whom has had considerable experience of marine matters generally, and of Canadian navigation in particular, these criticisms have been hurled broadcast, and whatever the intention, the tendency has been, in general, to disparage the St. Lawrence route, and in fact, all shipment to Canada.

In regard to the case of the Middleham Castle which was dealt with in our last issue, the master was reprimanded for venturesome navigation in unknown waters without having surrounded himself with the necessary information for safe navigation. It was mentioned that under different circumstances than exist in regard to shipping at present, and having regard to the fact that the vessel carried Admiralty supplies, the master's certificate would have been suspended for two months. Judging from the evidence, and coupled with the actual knowledge of the route possessed by the Commissioner and the assessors, it was unanimously decided that there had been reckless navigation, and in view of that fact, the statement made by the Journal of Commerce, that "such a sweeping judgment could not possibly be left unchallenged," seems absurd.

In another case, subsequent to that of the Middleham Castle, viz., the s.s. Fremona, the Wreck Commissioner, in dealing with the master in precisely the same manner as he did with the master of the Middleham Castle, said: "The court again faces a situation which seems to predominate lately, viz., to navigate the St. Lawrence on pure assumption."

Telegraph, Telephone and Cable Matters.

The Marconi Wireless Telegraph Co. is arranging to erect a large wireless telegraph station at Juneau, Alaska. A party of the company's men left Vancouver early in September for the north to undertake the preliminary work.

The C.P.R. is arranging to remove all its telegraph poles from Fifth St., Chatham, Ont. The question of the removal of the Great North Western Telegraph Co.'s poles from King, Queen and William Sts., is before the Board of Railway Commissioners.

J. G. Davies, heretofore chief operator, C. P. R. Telegraphs, Montreal, has been appointed Superintendent, Great North Western Telegraph Co., Winnipeg, vice J. Paddington, resigned. S. Goldstein, local manager, Great North Western Telegraph Co., Winnipeg, has resigned.

The Imperial Privy Council has dismissed the Commercial Cable Co.'s appeal against the Newfoundland Supreme Court's decision that it is not entitled to recover \$12,000 and \$10,916.13, alleged to be due under an agreement with the Newfoundland Government. The agreement was in relation to the landing of one of the trans-Atlantic cables at St. John's.

The Great North Western Telegraph Co. has opened offices at Bagotville, Chicoutimi Ouest and Laterriere, Que.; Mar-mora, Ont.; Browning, Merid and St. Brieux, Sask., and Benton Station, Alta., and has closed its offices at Deschaillons, Lake St. Joseph Hotel, Little Metis

Beach, Manoir Richelieu and Pointe au Pic, Que.; Avening and Queens Royal Hotel, Niagara on the Lake, Ont. The names of the following offices have been changed: Paquet, Que., to Linton Jct.; Berlin, Ont., to Kitchener, and Deerfield, Man., to Grahamdale.

James Gibbs Davies, who has been appointed Superintendent, Great North Western Telegraph Co., Winnipeg, was born at Hot Springs, Ark., June 20, 1877, and entered telegraph service at Helena, Mont., as a messenger, and soon became an operator. He was subsequently appointed local manager, Western Union Telegraph Co., Anaconda, Mont., and on Oct. 22, 1902, was transferred to New York, and placed in charge of certain of the company's offices in the Fulton fish market district, and later was appointed District Manager for the company there. After leaving New York, he was for some time in the service of the Great North Western Telegraph Co., at Ottawa, Ont., and in July, 1912, entered C.P.R. Telegraphs service, where he has been agent at Victoria, B.C., and latterly chief operator and circuit manager at Montreal.

Telegraph companies operating in the Dominion are now handling day lettergrams, on a somewhat similar basis to the night lettergrams which have been in use for some time. The C.P.R. Telegraphs and Grand Trunk Pacific Telegraphs placed the system in operation Aug. 28, and the Great North Western Telegraph Co., on Sept. 1. The service is a deferred one at rates lower than the standard rates, being as follows:—1½ times the 10 word day message rate for 50 words or less, and 1/5 the initial rate for each additional 10 words or less. These messages are subordinate to the priority of transmission and delivery of regular messages, and must be written in plain English, or in French between places in Canada, and code words are not permissible. The C.P.R. and G.T.P. services are only between places in Canada, while the Great North Western service, in conjunction with the Western Union Telegraph Co., covers all stations on the two systems in Canada and the U.S.

Marconi Wireless Telegraph Co. of Canada, Ltd.

The following are extracts from the report for the year ending Jan. 31, 1915:—The company's business continues to show substantial expansion. The most gratifying feature during the year just concluded has been the steady development of the transatlantic traffic. In spite of the general dislocation of business created by war conditions, the work being done by the Glace Bay station in

maintaining direct communication between Canada and Europe shows a satisfactory increase in traffic handled, and in income resulting from that source. There is every evidence of this improvement being maintained during the current year. The unique value of Marconi wireless in every phase of the present war is a matter of common knowledge; its supreme value during possible isolation of any country during interruption of cable communication has been demonstrated on two occasions during the past year when the business community of Canada was to a large extent dependent on the Marconi service between Glace Bay and Ireland.

The plant in Montreal has been kept fully occupied in supplying the demand for additional installations on board ships and commercial stations, as well as in meeting increased government requirements. A growing sentiment is apparent amongst progressive shipowners that no vessel engaged in coastwise or ocean trade is fully equipped unless furnished with a Marconi wireless installation, and wireless stations aboard ship are now being viewed with favor even on vessels exempt by law from compulsory equipment. A total of some 2,300 mercantile vessels have up to the present been fitted with Marconi wireless stations by the various Marconi companies.

Your directors appreciate that the good will of the public constitutes a most valuable asset to the company, and have accordingly extended the facilities of its marine department in order to give the best possible service to its patrons by creating divisional offices and stores in the more important centres of St. John's, Nfld., Toronto and Vancouver. Owing to the constant demands on the operating staff caused by the war, a school of instruction for operators has been established in Montreal under the direct control of the company, and equipped with the latest type of standard apparatus.

The adverse effect caused by the company's normal traffic to and from ships, owing to the stringency of censorship imposed on commercial messages, has unfortunately continued in evidence throughout the current period. The basis of remuneration from the Government for the use of a number of the company's coast stations taken over by the Naval Service Department since the commencement of hostilities, and for other services rendered, is still under consideration, and an equitable settlement is awaited in the near future.

The profit for the year was \$110,226.06.

At the annual meeting in Montreal the retiring directors were re-elected as follows:—A. A. Allan, Senatore G. Marconi, J. N. Greenshields, K.C., Robert Bickerdike, M.P., G. C. Isaacs, G. M. Bosworth, W. D. Birchall, E. J. Nally, J. H. Lauer.

Among the Express Companies.

J. A. Ravin has been appointed agent, Canadian Northern Ex. Co., Moose Jaw, Sask., vice L. I. Watts transferred.

H. D. Peak, from the Seattle, Wash., office, is acting as agent, American Ex. Co., Vancouver, B.C., during the illness of L. Dassonville.

The Canadian Northern Ex. Co. has opened offices at Dropmore and East Selkirk, Man.; Browning, Merid, Fairmount, and St. Brieux, Sask.; and Benton, Alta., and has closed its offices at Stoco, Ont., and Parry, Sask.

The British Columbia Electric Ry. has started an express service. Express consignments for New Westminster and points on the Fraser Valley line will be picked up in Vancouver, and deliveries made in Vancouver from points outside.

F. S. Cox, an employee of the Canadian Northern Ex. Co., at Saskatoon, Sask., who enlisted in the early stages of the war, and has been in France for some time, has been awarded the distinguished conduct medal for coolness and bravery under fire and for volunteering to bring in wounded men.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Canadian Westinghouse Co. has issued a circular, H-7001, descriptive of type K auto starters for squirrel cage induction motors of from 7½ to 300 h.p., 110 to 2,200 volts, 25 to 60 cycles. Detailed illustrations are given, with tables showing the particular type to use for special work.

The Independent Pneumatic Tool Co. has made arrangements with the Garlock-Walker Machinery Co., 70 Front St., Toronto, to act as agents for the sale of pneumatic tools in Ontario east to Belleville. The line of pneumatic tools consists of piston air drills, reversible and non-reversible, for drilling, reaming, tapping, flue rolling and wood boring; close corner air drills; pneumatic grinders; pneumatic hammers for riveting, chipping, calking and flue beading; electric drills and grinders; pneumatic tool hose, hose couplings and spart parts. A stock will be carried by the Garlock-Walker Machinery Co. The Independent Pneumatic Tool Co. also maintains its own office at 334 St. James St., Montreal.

Style No. 200

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

CONFIDENCE—a commodity in the form of the Model 2A Signal

WHY do you insist upon buying Model 2A Signals? Why not install any semaphore signal?

It is because you know it will give good reliable service no matter what the weather conditions may be; because you can depend upon it in low-voltage operation, in electric interlocking and in alternating current service. It is because you have confidence in the signal, confidence that it will be on the job 24 hours each day through the sleet, snow, sunshine and rain of the passing seasons.

Look through the side door at the gears. You will notice the big teeth with ample clearances.

Open the deep door and examine the motor and circuit controller. The motor is oversized, large and substantial yet the operating and holding currents are low. The circuit controller parts are adequate in size and easy to inspect and adjust.

It is this simple design, these well-made parts and the substantial construction that make for reliable service and your confidence. When you buy Model 2A's, you buy a Signal that has the confidence of the signal world,

ASK FOR THE STORY OF THE MODEL 2A

"Safety First"

Office and Works, Lachine, Quebec

Branch Office, Winnipeg, Manitoba

THIS plant was built especially to manufacture under the most favorable conditions, all classes of transportation equipment. The Engineering Staff, the Mechanics, the Machine and Tool equipment are the best that can be secured.

We build passenger and freight cars of all types required by leading railroad companies. We also supply Contractors' Dump Cars and Logging Car equipment.

We are prepared to submit designs and tenders on Steam and Railroad Passenger Cars, Sleeping Cars, Baggage and Express Cars, Suburban and Interurban Electric Cars, Freight Cars of all types and special transportation equipment.

Enquiries invited.

Nova Scotia Steel & Coal Company

LIMITED

Manufacturers of Steel for Shrapnel Shells and Admiralty Forgings

Only Company in Canada producing Steel Ingots by the "Harmet" liquid process

Can supply Forgings up to 40 Tons in weight to all Admiralty and Lloyd's Tests and Specifications

FORGING A RUDDER FRAME

Why "Harmet" Liquid Process Steel Ingots are Superior to Ordinary Steel Ingots:—

1. Prevention of cracks due to shrinkage; of internal stresses and resulting cracks and fissures.
2. Early cessation in the crystallization of the metal, and the production of fine crystallization without cleavage planes.
3. Lessening of segregation, i.e., reduction of tendency of carbon and other impurities to concentrate in the central and upper parts of the ingot.
4. Prevention of "pipes" or interior cavities, and thus preservation of absolute solidity in the ingot.
5. Improvement in physical properties.
6. Reduction in waste of ingot.

OUR modern Steam Hydraulic Forge Shop at New Glasgow, N.S., part of which is shown above, and our large Steel Plant at Sydney Mines, N.S., equal the very best in America.

On the shortest notice, we can supply forgings of all shapes and sizes, made of ordinary or "Harmet" fluid compressed open-hearth steel, and satisfying the most severe specifications.

Our forges are modern in every respect—designed and installed after close study of the latest developments in all countries. Moreover, we produce the highest grades of steel by the most approved methods. It has always been the policy of "Scotia" to hold a position in the front rank of trade, and by the recent additions to plant, this policy has been maintained in a practical manner, bringing "Scotia's" equipment abreast of the best foreign forges.

For prices and full particulars, write to

Saving \$5.87 in One Half Hour's Time

THAT is exactly the saving effected by a 15 ton Brownhoist in one half hour's time in the shop yards of a large middle western shop, loading car wheels.

At 17½ cents an hour, hand labor may seem cheaper to use. That is what the railroad that is now using this Brownhoist used to think. On this road, loading a car with 115 car wheels, averaging 800 lbs. each, used to take 4 men, at 17½ cents an hour, *nine hours* to load a car from a car floor height platform.

Today, this railroad by using a 15 ton Brownhoist completes this job in exactly 30 minutes, at an operating cost of \$.43.

Equipped with a lifting magnet, six wheels are lifted at a time, and the operative speed of the Brownhoist, together with its safety features, make this saving possible.

This is but one of the many jobs this railroad has effected a big saving on, by using the Brownhoist.

Our new catalog I on "Locomotive Cranes," illustrates many time and labor saving jobs performed by Brownhoists on railway work. Write for your copy.

Quality

Service

Courtesy in Business

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

Electric Dynamic Interlocking, Hackensack—Erie R. R.

Safety and Reliability Keynotes Of Electric Interlocking

SAFETY and reliability are the keynotes of the efficiency of Electric Dynamic Interlocking. Dynamic Indication is correct in principle, while practice proves that its operation is un-failing—an absolute correspondence between lever and function operated.

Not only is the G. R. S. Interlocking System, using dynamic indication, thoroughly reliable, but it possesses a marked simplicity with a low cost both for operation and maintenance.

The G. R. S. Interlocking System is easily adapted to small and large interlocking plants, while its limitations as to size of interlocking and adaptability to varying traffic conditions have never been reached.

Eighty per cent. of all power interlocking now installed in the United States is G. R. S. Electric. Surely convincing assurance of its simplicity, safety, reliability and ultimate economy. Write us for facts, figures and photographs that prove.

The Wonderful Single Service Chilled Iron Wheel

Single Service means when a wheel is applied to a car it is allowed to run its life without any repairs whatever.

No Shop Investment in expensive lathes is required for re-turning, which is the case with other types of wheels.

And the manufacturers are so confident of the performance of the Chilled Iron Wheels that ordinary freight car wheels are guaranteed to yield a minimum service of

6 years for 625 lb. M.C.B. Wheels.

5 years for 675 lb. M.C.B. Wheels.

4 years for 725 lb. M.C.B. Wheels.

The actual guaranteed cost to the railroad per year for a 625 lb. M.C.B. Wheel is one-sixth of the cost price, less the scrap value of the old wheel, which is accepted as part payment for the new wheel.

The Master Car Builders Interchange rules base the cost of renewals upon the following:

	Chilled Iron.	Other Types.
Cost of new wheel	\$9.00	\$19.50
Less average scrap credit price.....	4.75	4.50
Net	\$4.25	\$15.00
Interest at 5 per cent. for one year21	.75

Difference in interest in favor of Chilled Iron Wheel54

As the average service of Chilled Iron Wheels is from 50 to 75 per cent. greater than the guarantee it will be seen that the increased interest charges alone of other types of wheels will more than absorb the renewal cost of the Chilled Iron Wheel.

Ninety-seven per cent. of the freight cars in use are equipped with Chilled Iron Wheels and service measures the standards. 25,000,000 Now Running.

Association of Manufacturers of Chilled Car Wheels 1228 McCormick Building, Chicago

Representing Forty-eight Wheel Foundries Throughout the United States and Canada. Capacity 20,000 Chilled Iron Wheels Per Day.

Superintendents of Motive Power, Fuel Agents, Officials in Charge of Operation

Should investigate the merits of the Dearborn Method of Water Treatment.

It is inexpensive—costs less than any other method.

It is effective—the waters requiring treatment are analyzed, and the treatment made to meet the actual requirements.

It accomplishes—the removal and prevention of scale—stops leaks—prevents corrosion—overcomes all foaming trouble.

The benefits—life of boiler tubes greatly lengthened—expense for boiler work reduced to minimum—mileage between boiler washings increased—large saving in fuel effected by having boilers free from scale. All the troubles due to bad water overcome and service generally improved.

Experts furnished to instruct in application of treatment.

Now used on more than 100 American railways.

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE — INTERCOLONIAL RAILWAY

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

It is an Established Fact

That fireboxes of all types equipped with the Tate Flexible Staybolt show the lowest maintenance cost and highest earnings.

The Flexibility in the bolt serves to accomodate the relative expansion of plates under working operations of the fire box and boiler in a manner that has afforded less destruction to the sheets and seams than were found under conditions where fireboxes were rigidly stayed.

The Tate Flexible Staybolt is designed and made to give satisfactory results in the final measure of its usefulness, as an economic, safe and reliable factor in reducing the costs of firebox repairs and maintenance.

In use on all the prominent railroad systems of Canada.

FLANNERY BOLT COMPANY, Vanadium Building, Pittsburgh, Pa.

RESULTS COUNT

That's Why 480 Railroad Shops Are Using Thermit

Thermit offers the only sure and reliable repair for locomotive frames and other heavy sections.

The superheated liquid Thermit steel is produced in bulk and poured all at once into a mold surrounding a broken section, resulting in the perfect amalgamation of the Thermit steel with the parts with which it comes in contact. The fact that those parts are first preheated, makes the weld doubly sure.

The operation of welding locomotive frames is easily accomplished, without removing the frame from position, and with very little dismantling, no matter if the frame be broken in the splice, jaw, next to the cylinder saddle, or at any other point. The engine is returned to service in from ten to twelve hours.

Hundreds of thousands of pounds of Thermit are being used annually by railroad companies in the United States and Canada.

There is only one reason for this, and that is that Thermit produces results and we all know that "results count."

Our pamphlet No. 2144 will be of interest.

All Thermit and Thermit appliances are made in our Canadian shops.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

Canadian Railway and Marine World

November, 1916.

Railway Location and Construction Through Muskeg Swamps.

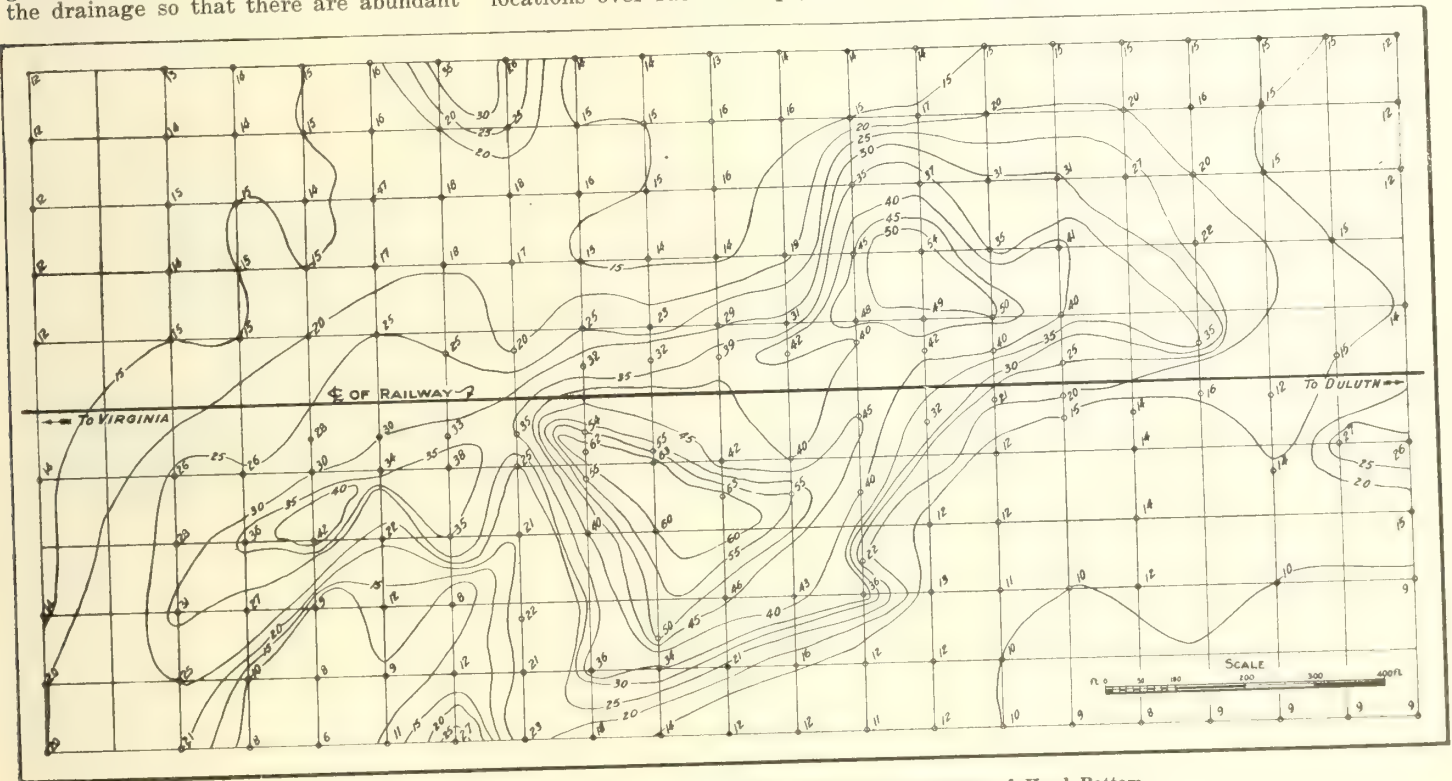

By J. L. Pickles, Chief Engineer, Duluth, Winnipeg & Pacific Railway.

In locating roads over muskeg country, it is well to have a slight knowledge of the geology and the accepted theory of this formation. When the continental ice cap receded, it left vast quantities of glacial drift, composed of all sorts of material, varying in size from huge boulders weighing several hundred tons down to an impalpable powder forming clay. It is owing to this glacial invasion that the surface differs from the normal type in the minor topography and drainage. The whole plateau is deeply covered with glacial deposits, which have disarranged the drainage so that there are abundant

tions over these swamps that a thorough investigation should be made to determine contours of the hard bottom. We are too apt to take it for granted that the muskeg is but of a shallow formation, and trust to our road to be supported by the decayed vegetation rather than to accept the country surrounding these swamps, which is invariably covered with very thick vegetation. There is a great temptation to run our lines through the open country, in order to avoid a more difficult location on higher ground, in which the regularities are apparent. In locations over such swamps, it would be

doubtedly cause a great deal of criticism of his location, it would in some instances be a very great economy to do so.

I have made a study of the vegetation covering these swamps, with a view to ascertain if the growth was in any way indicative of the depth of the swamp. Generally speaking, it will be found that the smaller the tree growth and the more luxuriant the growth of the moss, the deeper will be the muskeg, but I have not as yet been able to ascertain anything more than a very approximate depth by such observations. The areas found void of tree growth should be re-

Miller Trunk Swamp, Feb. 1913. Contour Map Showing Conditions of Hard Bottom. Contour interval 5 ft. A depth less than 15 ft. supports traffic.

lakes, swamps and muskegs. Overlaying the glacial drift and under the swamp is usually found a stratum of impervious blue clay. As the ice melted, the materials were deposited, as an over-mantle of glacial drift, in moranes and in a very irregular manner, so that the topography of the country did not conform to the usual regularity presented by country formed by the erosive action of water. Huge quantities of ice were left embedded, afterwards melting, which formed large circular depressions or kettles. These became filled with water in form of lakes. The muskeg is of recent formation and is composed of decayed moss and various vegetable growth, which, by constant decay and renewal, gradually filled the depressions until we have what are known today as muskeg swamps.

As the added formation does not bear the regular contours usually found, it is very necessary in determining loca-

well for the engineer to proceed in the same manner as he would in locating over frozen lakes, and not trust the moss covering to support his line until he has thoroughly tested the same and ascertained what the bearing value of the soil is. In testing it will quite often be found that the surface is floating and the lake is not yet filled to the bottom. In such cases disaster is sure to follow unless adequate measures are taken to support the track. Another weakness that is often met with in such locations is the desire to obtain long tangents. It would be much better to introduce curvature in the alignment, in order to keep the location over shallow swamps, than to produce long tangents crossing over deep pockets. It would, of course, take a great deal of stamina on the part of any engineer to introduce apparent reversed curves on what appears to be level ground; and while this would un-

garded with suspicion, as this usually indicates deep and recent formation and quite often indicates floating bog.

It has been found in some of the lines already constructed, that had adequate soundings been made previous to final locations, a great deal of money would have been saved over what was necessarily spent to bring the road up to the required standard after operation was begun. As a concrete example, I would like to draw attention to the accompanying plan. As constructed, the line at this point was first heavily corduroyed, which broke through before traffic was started. Soundings taken on centre line after failure showed a depth of about 60 ft. to apparently hard bottom. About 83,000 yards of material were required to again bring the track above water. A great deal of time and money was lost, due to the failure of the surface. All of this would have been avoided had adequate

soundings been taken during the location, and the time and money lost in this one instance would have been much more than required for adequate sounding of the entire line.

In railway construction over muskeg swamps, the methods in general use are: (1) To follow out the usual form of construction, laying the track directly on the surface and afterwards ballasting up to grade. (2) To corduroy or crossway the surface, using long timbers, laying them in alternative layers parallel and transverse to the line, afterward bringing the track to grade with ballast. (3) By excavating ditches along the side of the line, using the material excavated to form embankment. (4) The use of sawdust, cinders, or other light material, floating the line over and depending on the buoyancy of the muskeg for support. (5) Fill to the bottom with logs and timber. (6) Fill with excavated material. (7) By bridging. (8) Where considerable embankment is to be carried over the swamp, piles have been driven on about 4 ft. centres capped with grillage and the fill constructed on the same.

Drainage is often resorted to with very beneficial results. However, in many instances, where deep muskeg is encountered, it is not practical to drain, due to large lakes in the vicinity and excep-

Miller Trunk Swamp, Feb. 1913; Profile of hard bottom.

tionally heavy expense required due to great length of ditches which it would be necessary to construct. Ditches cut in muskeg are prone to close and it is a source of expense to keep them open. And then again it will usually be found that there is no place to stop the ditch without carrying it to an unreasonable distance. While such ditches are always more benefit to the surrounding country than to the roads constructing them, they invariably bring on a system of suits in which the company is usually the loser. It is for this reason alone that many of the swamps in the northern part of Minnesota are not drained.

Whatever the construction decided upon, it must be borne in mind that a good foundation must be obtained, otherwise there will be a constant source of expense and trouble from rail running, causing broken rails, derailments, and a constant settlement, which will result in very heavy maintenance charges.

In locations over this country, it is well to always keep the grade as near the surface as good drainage will permit, in order not to overload the surface by the weight of heavy embankments, which are apt to break through the surface and sometimes will cause rupture through the underlying stratum into the substratum, which is of an older formation but not yet solidified sufficiently to carry the increased load.

Swamps are like wrecks—there are no two of them alike, and they are very good things to avoid if at all possible.

Agent, B.C. Coast Service and Ocean Steamship Lines, C.P.R., Vancouver, B.C. born at Montreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

W. L. Crighton, Advertising Agent, Canadian Government Railways, Moncton, N.B., born at Derby, Eng., Nov. 9, 1871.

W. R. Devenish, A.M.Can.Soc.C.E., Superintendent, District 3, Intercolonial Ry., Moncton, N.B., born in County Tipperary, Ireland, Nov. 21, 1882.

W. A. Whyte, District Freight Agent, Canadian Northern Ry., Regina, Sask., born at Hornsey, England, Nov. 24, 1890.

Pacific Type Locomotives for Canadian Government Railways.

Ten heavy Pacific type 4-6-2 passenger locomotives are being built for Canadian Government Railways by Canadian Locomotive Co. They are of the railway standard type for this class, and only a few special features are embodied in the design. The boiler is of the extended wagon type, and is 72 in. in diameter at the front end and 75 in. at the largest course. The barrel is fitted with 2 and 5 1/2 in. dia. tubes, 20 1/2 ft. over tube sheets, and has 28-unit Locomotive Superheater Co's header. The fire box is 109 x 75 in., power operating grate shaker, radial buffers between engine and tender, self-centering valve stem guides, and extended piston rods, flexible stay-

Coal capacity.....	10 tons.
Style of truck.....	4 wheel equalized type.
Diameter of wheel.....	36 in.
Kind of wheel.....	Steel tired.
Diameter and length of journal.....	5 1/2 x 10 in.
Diameter and length of journal.....	5 1/2 x 10 in. M-C-B.
Brake beam.....	Simplex high speed.

National Transcontinental Railway Elevator at Transcona.

The elevator plant which is to be built at Transcona, Man., a little southeast of the N.T.R. shops will consist of a working house, with track shed, a storage house, dryer house and boiler house. The elevator's principal business will be to receive from and load into railway cars. Facilities for cleaning, drying and storing grain will be included in the equipment. All material used in the construction of the buildings and equipment, excepting belts and ropes, will be non combustible. The foundations will consist of reinforced concrete slab on wood piles. The working house will be 106 by 60 ft. 10 in., measured on the outside of first story columns. The first story and bins and cupola of the working house will be of reinforced concrete. The curtain walls of the first story and cupola will be of

house. The tunnels for basement conveyors between the working house and storage house will be of reinforced concrete throughout.
The buildings will be erected under the direction of C. B. Brown, Chief Engineer, Canadian Government Railways, and have been designed by John S. Metcalf Co. Ltd., Montreal, who will supervise the erection.
We are officially advised that contracts have been awarded for building the substructure to the Thunder Bay Contracting Co., Ltd., Port Arthur, Ont., and for the superstructure to Figles-Bellows Engineering Co., Ltd., Fort William, Ont.

Handrails on Locomotives and Tenders.

The Board of Railway Commissioners passed General Order 172, dated Sept. 28, as follows: Re general order 171, dated Aug. 1, 1916, requiring railway companies, inter alia, to equip the tenders of all locomotives of 100,000 lb. or over with a railing on both sides, on the top of the coping. Upon the report and recommendation of the Chief Operating Officer it is ordered that the said order

Pacific Type Locomotive, Canadian Government Railways.

steel frames, metallic packing, cross-bolts in breaking zone of fire box, cast heads of the 2 bar alligator type, Walschaert valve gear, relief valves, hard grease driving box cellars, vestibule type of cab, trailing truck of radial bar type, with out side bearings, Detroit 5-feed lubricator, incandescent headlight with latest type of turbo-generator, cast steel cradle at rear end of frame, injector check on top of boiler, pedestal type of tender box, and outside equalizer type, 4-wheel tender truck for 5 1/2 x 10 in. M-C-B journal. The general dimensions, etc., are as follows:
Fuel used.....Bituminous coal.
Weight in working order, drivers.....150,000 lbs.
Weight in working order, total.....230,000 lbs.
Wheel base of engine, rigid.....13 ft.
Wheel base of engine, total.....36 ft. 6 in.
Wheel base of engine and tender.....65 ft. 1 in.
Diameter of driving wheels.....73 in.
Material of driving wheels, centres.....cast steel.
Diameter and length of driving journals.....10 ft. x 13 in.
Diameter of cylinders.....23 1/2 in.
Stroke of cylinders.....28 in.
Type of boiler.....Radial stay.
Working pressure of boiler.....200 lbs.
Number of tubes.....205, 28.
Diameter of tubes.....2 in., 5 1/2 in.
Length of tubes.....20 1/2 ft.
Injectors.....Locomotive type.
Brakes.....Westinghouse American.
Superheater.....Schmidt type A.
Cab.....Vestibule type.
TENDER.
Weight, loaded.....150,000 lbs.
Capacity of tank in imp. gallons.....6,500
Style of tank.....Water bottom.

brick, 9 in. thick. The bin walls will be 65 ft. deep. Floors and roof will be of reinforced concrete and roof will be covered with tar, felt, and gravel.
A track shed, 104 1/2 ft. by 69 ft. 7 in., measured on centre line of columns and covering 4 railway tracks will extend along north side of the working house. It will be built of structural steel, outside wall and ends being covered with galvanized corrugated steel. Track openings will be closed by Kinnear doors. Roof and roof covering will be similar to those in the working house. Floors will be of concrete.
The storage house will be 135 ft. 7 in. x 90 ft. 7 in., measured on the outside of bin walls and will consist of 24 bins, having an inside diameter of 21 ft. 11 in. and 15 interspace bins. The walls of the storage bins will be 7 in. thick and 95 ft. high and will be built of reinforced concrete. Bin bottoms will be of concrete and so sloped and finished that they will be self emptying. The structure above the storage bins will be built of reinforced concrete, having floors, roof and roof covering similar to those in the working house. The tops of the bins will not be floored over.
The galleries connecting the working house and storage house will be of structural steel, covered with corrugated galvanized steel, with floors, roofs and roof coverings similar to those in the working

be amended by striking out the word "such" in the first line of paragraph 2.
General order 171 was published in full in Canadian Railway and Marine World for October, paragraph 2 reading as follows: "That the tender of all such locomotives be equipped with a railing on both sides, on the top of the coping; such railing, if made of round bar iron or of iron pipe, to be not less than 1 in. in diameter, supported by three columns, one at each end and one in the centre, standing 8 in. from the top of the coping; the said rails to run the full length of the fuel storage well, or clear of the back coal wall on the tender; that on the space back of the coal wall, where the water man hole is located, the coping or railing project 8 in. above the top of the tank and run around both sides and back of the tank not less than 8 in. high, supported by columns to make it secure. That plans showing the proposed foot rests and the railing on tenders be filed for the Board's approval."
By order 172 the word "such," shown in the paragraph quoted above in bold face letters, is struck out and the provision of railings on all tenders is made obligatory.
The locomotives dealt with in paragraph 1 of the order and which were referred to in paragraph 1 as "such locomotives" are locomotives of 100,000 lbs. and over.

Railway Mechanical Methods and Devices.

Testing Air Valves in C.P.R. Passenger Car Shops.

A device for testing air pressure governor valves and reducing valves in the C.P.R. passenger car shops, air brake department at Vancouver, is shown in the accompanying illustration. Prior to the

the car is applied and the reducing valve and air pressure governor on both are set to operate at a given pressure. This method eliminates a lot of adjusting in the passenger car yard and prevents a car leaving the yard with valves not properly adjusted. We are indebted to T. Spence, General Car Foreman, C.P.R., Vancouver, for the foregoing information

was designed to ensure strictly clean brass and copper scrap. It consists of half of an old G.E. 800 type motor case, fitted with a special shunt wound field coil, connected on 500 volt circuit with outside resistance.

The mixed clippings are shovelled into the upper hopper, which is made of wood with a slotted outlet about 1x4 in., situated directly above the centre of the magnet and about 2 in. out from the face so that clippings sifted through this opening fall directly past the magnet's field. The brass, not being attracted in falling, strikes a baffle, which throws it into the outer box. The steel and iron, being attracted by the magnet, are either drawn against its face or dropped through a 3 in. opening about 15 in. long into the rear box. The clippings which are held against the magnet face are dropped directly into the rear box when power is released from the magnet.

Mixed clippings are of little value and this device has paid for itself many times over owing to the high price obtained for clear brass and copper clippings. The cost of power to operate the magnet is negligible. We are indebted for the foregoing information and the photographs to Keith MacLeod, Engineer of Equipment, Montreal Tramways Co.

Salvaging Shears and Hammer, Michigan Central Shops.

The accompanying illustration shows a machine used in salvaging reclaimed iron, etc., and separating cast and wrought iron. It was built from scrap material under the direction of N. Marple, General Car Foreman, M.C.R. Shops, St. Thomas, Ont., and consists of cutting shears and striking hammer. The hammer is made from an old car axle and is held in position by steel wheel centre. The frame is made from old channel iron, the gasoline engine is the remains of a discarded cement mixer, the shears crank shaft is

Device for Testing Air Pressure Governor and Reducing Valves.

installation of the device, valves were cleaned and ground in the shop, reassembled and put back into position in their respective places on the cars. As they have to be adjusted to a 15 and 60 lb. air pressure it was necessary to have the tank under air pressure to make the adjustment and this method very often caused delay.

and photograph from which the illustration was made.

Magnetic Separator for Brass Turnings, Montreal Tramways Co.

The device illustrated herewith is used for separating steel and iron chips from

Magnetic Separator for Brass Turnings.

The testing device is made up of two air chambers connected to air pressure through a 3-way valve with double hand gauge above, so that the same condition that occurs in the air brake system on

Salvaging Shears and Hammer.

brass and copper turnings. Although precautions are taken to keep turnings from each job separate, it is impossible to entirely prevent foreign chips from getting into the pans, and the separator

made from an old engine, the bed of the shears, from an old engine bed, the shear rims from two passenger truck equalizers, and the fly wheel and pulleys from scrap. The shears make 52 cuts a

minute and cut up to $1\frac{1}{2}$ in. diameter. The hammer, which is used for straightening salvage iron, strikes 100 blows a minute and will straighten iron up to $1\frac{1}{2}$ in. diameter. Since the photograph was taken the engine parts have been covered in and the rest of the machine covered over for protection from the weather, and safety devices have been applied to protect the men working. The machine has proved a valuable saver on scrap material. We are indebted for the foregoing information and for the photograph to John Jackson, Foreman, Repair Track, M.C.R., St. Thomas, Ont., who took the photograph from which the illustration was made.

Stationary Locomotive Stack Blower on the Grand Trunk Pacific Railway.

The accompanying sketch shows a method of arranging piping with attachment and connection for stationary locomotive stack blower, in use in the Grand Trunk Pacific locomotive house at Watrous, Sask. A line of 2 in. steam piping is run from the stationary boilers through the locomotive house and is placed high enough so that the locomotives pass under it. From this steam line at every second post is a $1\frac{1}{4}$ in. pipe coming down to within about 4 ft. from the floor. This pipe has a valve and from the valve steam is carried back up the same post to each smoke jack. This makes three valves at the post, which govern the flow of steam. Flexible joints are used from the post to the smoke jacks so that the jack can be raised and lowered. This style of blower has been in use over two years and all the expense necessary has been to grind in the valves occasionally. It is always ready for service and the boilermakers, as well as the light-up man, make use of it. When used for lighting up they do not let any smoke outside the jack but will actually take the smoke out of the locomotive house if it should be close to the stack. We are indebted to Geo. Robinson, Locomotive Foreman, Watrous, Sask., for the foregoing information.

Rivetting Dolly in Grand Trunk Shops.

The accompanying plan shows a rivetting dolly used in the G.T.R. shops at Belleville, Ont., operating in a pit, for holding behind rivets in driving wheels, locomotive and tender truck wheels where the tires are rivetted on with an air hammer.

The measurements in the plan are for the wheel dolly, a similar one of the required size can be used to an advantage for holding against foundation ring rivets inside of fire box.

The frame is made from wrought iron scrap welded to a centre in which the raising or lowering screw operates. The barrel is made from three-inch wrought iron pipe with a plug welded solid in one end. The opposite end is fitted with a three-inch pipe coupling screwed up flush and the inside bored out to fit snug to the piston which has a packing ring attached on the inside surface. Air is fed through a half-inch hose and controlled by a three-way air cock tapped into the three-inch pipe about the centre. We are indebted to W. H. Towner, Locomotive Foreman, G.T.R., Belleville, for the foregoing information.

Stationary Locomotive Stack Blower on G.T.P.R.

Rivetting Dolly.

Queen's University, Kingston, Ont. The following appointments have been made: J. F. Wilson of Michigan University, Professor of Electrical Engineering;

L. S. Eaton of Cornell University, Professor of Mechanical Engineering; I. C. Demarest of Columbia University, Lecturer in Latin.

Box Cars for Duluth, Winnipeg and Pacific Railway.

The 750 box cars which the Canadian Northern Ry. is having built for its subsidiary, the Duluth, Winnipeg & Pacific Ry., by Haskell & Parker Car Co., Michigan City, Ind., will have the following general dimensions:—

Length over end sills	36 ft. 9 3/4 in.
Length inside, in the clear	35 ft. 10 3/4 in.
Width over side sills	9 ft. 3/4 in.
Width inside, in the clear	8 ft. 6 1/2 in.
Width of side door opening	6 ft.
Height of side door opening	7 ft. 6 in.
Height inside in the clear	8 ft.
Truck wheel base	5 ft. 4 in.
Side bearing centers	4 ft. 2 in.
Capacity	80,000 lbs.

The general equipment will include:— Westinghouse 812 air brakes; angle cock holders; malleable iron brake steps; security no. 5 door fixtures; inside metal roof no. 26 gauge corrugated, galvanized iron; roller side bearings; cast-steel draft arms arranged for 6 1/4 x 8 in. tandem

The trucks will be of the arch bar type of 40 tons capacity, with a wheel base of 5 ft. 4 in.

Bogie Cars for the Nigerian Ry.

The Nigerian Railway in West Africa, which is owned by the Government of that Crown Colony, has, through the Crown Agents for the Colonies, had built by Canadian Car & Foundry Co. at Montreal 100 low-sided bogie cars, one of which is illustrated herewith. As they are for use on railway construction in the tropics they are designed to suit special conditions. They can be converted into flat cars by releasing sides and ends, making a car that can be used to best advantage in Nigeria.

The underframe is built up of standard American rolled sections, and trussed with rolled o.h.s. angles, forming a light yet strong construction, and covered with red pine flooring and 1/8 in. thick o.h.s. plates. In addition to this, at the joints

Canadian Pacific Railway Traffic Statistics.

The following figures are for the fiscal years ended June 30, 1915, and 1916, respectively:—

Freight forwarded.	1914-1915.	1915-1916.
Flour, barrels	8,538,600	10,499,260
Grain, bushels	126,909,828	276,788,209
Live stock, head	2,833,726	2,190,389
Lumber, feet	2,180,735,600	2,696,804,934
Firewood, cords	254,428	298,426
Manufactured articles, tons	6,024,590	7,960,723
All other articles, tons	7,423,163	8,228,156
Freight Traffic.	1914-1915.	1915-1916.
Number of tons carried	21,490,596	29,276,872
Number of tons carried one mile	7,940,151,342	14,057,685,773
Earnings per ton per mile	0.76 cts.	0.64 cts.
Passenger Traffic.	1914-1915.	1915-1916.
Passengers carried	13,202,603	13,833,978
Passengers carried one mile	1,164,488,630	1,255,561,198
Earnings per passenger per mile	2.06 cts.	1.97 cts.

TRAIN TRAFFIC STATISTICS.

Earnings of lake and river steamships, are not included below.

Bogie Car for Nigerian Railway.

spring draft gear; cast steel couplers, 5 x 7 in. shank; cast steel body bolsters; cast steel truck bolsters; malleable iron journal boxes, M C B for 5 x 9 in. journals; steel back brake shoes; M.C.M. class C truck springs; M.C.B. 5 x 9 in. journal bearings; M.C.B. 5 x 9 malleable iron journal wedges; M.C.B. trussed channel brake beams, no. 2; basswood dust guards.

The underframe will consist of eight 5 x 9 in. yellow ipne sills tenoned into the end sills, which will be of oak 8 x 9 in. cross ties. The underframe will be reinforced by six 1 1/4 in. truss rods. The cast steel draft arms, which will be bolted to the centre sills, will be arranged to hook over the cast steel bolsters, and will be braced by 5 x 5 in. oak sub-sills bolted to centre sills and extending lengthwise of the car between draft arms.

The superstructure will be of the double sheathed type, lined on the sides with 13/16 x 5 1/4 in. face board to the upper girth and lined on the ends to the plate with 1 1/2 x 5 1/4 in. face boards. The framing on the sides will be 2 1/2 in. thick, and the end framing 4 in. thick. Pocket castings will be used at the top and bottom of all side and end posts and braces.

The roof will be of the inside metal type, supported by yellow carlines.

of the steel plates 4 25-lb. a yard rails are bolted in place to protect the flooring and also to facilitate unloading of rails when the car is used for this purpose. The ends and sides are composed of red pine, stiffened with batten angles and hinges. Both ends and sides are hinged to butts riveted to the side angles of end sills.

The trucks are the standard American arch bar type, with built up bolsters. The side bearings are the friction type.

The wheels are of the European type, 33 1/2 in. dia. with wrought iron forged spoke centre, and o.h.s. tires mounted on axles with 4 1/4 x 8 in. journals. The oil boxes are made of cast iron and are filled with hair waste and oil.

Fifty of them are equipped with vacuum air brakes complete, and 50 are equipped only with through piping. In addition to the air brakes, all the cars are arranged to be operated with hand brake wheel at one end. They are all equipped with A.B.C. couplers, which are standard on this Nigerian Ry.

The Nigerian Railway has also had built by Canadian Car & Foundry Co. 100 ten-ton end tipping coal cars, which were described and illustrated in Canadian Railway and Marine World for April.

TRAIN MILEAGE.

	1914-5.	1915-6.
Passenger trains	17,977,033	18,159,545
Freight trains	16,896,368	25,355,997

Gross Earnings of Canadian Railways.

Up to June 30, 1914, the figures were for the Canadian Northern Ry. west from Port Arthur, Ont. The subsequent figures are for the Canadian Northern Ry. System, including lines east of Port Arthur also.

The Roadmasters and Maintenance of Way Association held its 34th annual convention at New York recently. The officers for the current year are: M. Burke, C.M. & S.P., Chicago, President; A. Grills, Superintendent of Track, G.T.R., St. Thomas, Ont., First Vice President; J. B. Oatman, Second Vice President; P. J. McAndrews, C.N. & W., Sterling, Ill., Secretary; W. H. Kosmehl, Elgin, Ill., Treasurer. The next convention will be held in Chicago, Ill.

The Grand Trunk Railway Patriotic Association held its second annual meeting at Toronto Sept. 30, when \$2,000 was voted for the British Red Cross Society, and about \$1,500 for the dispatch of

Christmas boxes to all G.T.R. terminal employees who have enlisted, whether they are in Canada or elsewhere. It was also decided to pay the Canadian Red Cross Society \$5 a week per man to look after each of the company's employees who may be a prisoner.

The Quebec Railway Light & Power Co.'s Montmorency Division, which has been sold to the Dominion Government, has not yet been transferred, but is being operated by the company on behalf of the government.

Canadian Railway Club. At the monthly meeting in Montreal, Oct. 10, W. S. Thompson, of the G.T.R. Press Bureau, read a paper on railway publicity.

C.P.R. Expenditures on Additions and Improvements.

During the year ended June 30, the following amounts were spent:

EASTERN LINES:	
Additional sidings, buildings, stations and yards	\$ 85,232.57
Permanent bridges and improvements of line	155,801.97
WESTERN LINES:	
Additional sidings, buildings, stations and yards	\$ 103,544.44
Permanent bridges and improvements of line	130,717.80
Fort William terminals, including coaling plant	1,360.42
East Winnipeg yard	28,847.92
Winnipeg station and hotel	77,193.60
Winnipeg terminals	99,980.94
Calgary hotel	4,213.11
Vancouver terminals	45,331.24
Connaught tunnel	1,251,732.47
Right of way	5,188.90
Additions to office buildings and hotels	1,748,110.84
Rented and temporary sidings	686,102.89
Telegraph extensions and additions	7,218.60
	28,572.41
	\$2,778,655.38

Expenditure on Leased and Acquired Lines.

NEW BRUNSWICK RY.:	
Additional sidings, buildings, stations and yards	\$ 3,085.92
Permanent bridges and improvements of line	15,129.90
St. John terminals	21,693.03
ATLANTIC & NORTH WESTERN RY.:	
Additional sidings, buildings, stations and yards	20,952.60
Permanent bridges and improvements of line	21,631.68
MONTREAL & OTTAWA RY.:	
Permanent bridges and improvements of line	8,366.02
MONTREAL & WESTERN RY.:	
Additional sidings, stations and yards	259.62
Permanent bridges and improvements of line	500.09
Account purchase of road	15,231.58
ONTARIO & QUEBEC RY.:	
Additional sidings, buildings, stations and yards	17,213.56
Permanent bridges and improvements of line	42,158.85
Double tracking	2,226.41
Toronto terminals	36,612.57
MANITOBA & NORTH WESTERN RY.:	
Additional sidings, buildings, stations and yards	802.50
Permanent bridges and improvements of line	960.41
Right of way	705.86
MANITOBA SOUTH WESTERN COLONIZATION RY.:	
Additional sidings, buildings, stations and yards	2,998.17
CALGARY & EDMONTON RY.:	
Additional sidings, buildings, stations and yards	7,067.57
Permanent bridges and improvements of line	1,516.46
Right of way	266.53
COLUMBIA & WESTERN RY.:	
Additional sidings, buildings, stations and yards	3,122.45
Permanent bridges and improvements of line	30,573.04
Right of way	1,776.28
NEW BRUNSWICK SOUTHERN RY.	
CAP DE LA MADELINE RY.	179.38
NORTHERN COLONIZATION RY.	32.51
ORFORD MOUNTAIN RY.	173.99
OTTAWA, NORTHERN & WESTERN RY.	14.85
ST. MAURICE VALLEY RY.	5,017.15
GEORGIAN BAY & SEABOARD RY.	311.61
GUELPH & GODERICH RY.	10,138.73
LINDSAY, BOBCAYGEON & PONTIAC RY.	1,798.62

Williams, Ivor S.	Machinist's helper	Ogden Shops	Wounded
Wyatt, William G.	Waiter	Montreal	Killed in action

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were drawn.

General Order 172. Sept. 28.—Amending general order 171, Aug. 1, 1916, re railing on locomotive tenders.

25428. Sept. 15.—Authorizing Brantford & Hamilton Ry. to rebuild bridge over Toronto, Hamilton & Buffalo Ry. near Cainsville, Ont.

25429. Sept. 15.—Approving plan showing change in location of crossing of G.T.R. by Berlin & Northern Ry. on Wellington St., Kitchener, Ont., work be done at expense of B. & N. R.

25430. Sept. 19.—Authorizing British Columbia Public Works Department to build highway crossing at each end of Grand Trunk Pacific Ry. bridge across Fraser River at Prince George.

25431. Sept. 19.—Approving Dominion Public Works Department's plan of bridge to be built across St. Charles River at Quebec.

25432. Sept. 19.—Authorizing Saskatchewan Board of Highway Commissioners to build highway over right of way of C.P.R. Swift Current Northwesterly Branch in n.e. ¼ Sec. 3-23-28, w.3m.

25433. Sept. 19.—Authorizing Canadian Northern Ry. to open for traffic extension of its Winnipeg and Northern Branch, mileage 48.56 to 62.72.

25434. Sept. 19.—Extending for 60 days from date time within which C.P.R. shall install bell at second public highway south of Brampton, Ont.

25435. Sept. 19.—Extending for one year from date time for building new Toronto, Hamilton & Buffalo Ry. bridge carrying King St., Hamilton,

Ont., over track, subject to conditions that city be not liable for any damages arising from non-repair bridge, and that T. H. & B. R. place walks on existing bridge in proper repair.

25436. Sept. 15.—Ordering G.T.R. to maintain day watchman between 7 a.m. and 7 p.m. at Laframboise St., St. Hyacinthe, Que.; cost to be divided equally between G.T.R. and municipality.

25437. Sept. 20.—Approving agreement between Bell Telephone Co. and Pleasant View Telephone Co., Aug. 16, 1915.

25438. Sept. 20.—Approving revised location Lake Erie & Northern Ry. from station 0 + 26.1 to 3 + 13.8, Brantford, Ontario.

25439. Sept. 19.—Ordering Grand Trunk Pacific Ry. to build spur track to accommodate at least 3 cars, switch points to be placed on tangent east of mail crane; and shelter station not below Board's standard 1 "B." with 60 ft. platform and driveway to siding, at Skeena Crossing, B.C.

25440. Sept. 20.—Authorizing G.T.R. to build siding for Peterborough Metal Products Co., Peterborough, Ont.

25441. Sept. 20.—Authorizing Canadian Northern Ry. to build across highway between River Lot 101, St. Paul's Parish and s.w. ¼ Sec. 33-11-4, e.p.m., Man.

25442 to 25446. Sept. 20.—Authorizing Canadian Northern Ry. to build across highways, between river lots 64 and 63; and 95 and 94; across Panet Road in lot 101; river lot 101, on either side C.P.R., St. Paul's Parish, Man.; and across highway between s.w. ¼ Sec. 33 and n.w. ¼ Sec. 28-11-4, e.p.m., Man.

25447, 25448. Sept. 19.—Approving Bell Telephone Co. agreements with Zion Line Telephone Association, Ltd., Aug. 25, 1915, and the Omamee Telephone Co., Sept. 9, 1916.

25449. Sept. 20.—Authorizing G.T.R. to build sidings and spurs for James Playfair, Midland, Ont.

25450. Sept. 20.—Authorizing C.P.R. to build

its Irricana Subdivision at mileage 6.88 across diverted highway in n.e. ¼ Sec. 14-22-19, w.4 m., Alta.

25451. Sept. 21.—Authorizing C.P.R. to build second track across Level St., Churchbridge, Man.

25452. Sept. 20.—Authorizing G.T.R. to build siding for Forwarders Ltd., Kingston, Ont.

25453. Sept. 22.—Suspending, pending hearing to be fixed by Board, proposed cancellation of special commodity rates on iron and steel articles from stations in Canada to St. Lawrence River and Atlantic ports for export, as contained in schedules of G.T.R., C.P.R., T. H. & B. Ry., C.N.R., M.C.R., Wabash Ry. and P. M. R.

25454 to 25456. Sept. 22.—Authorizing C.P.R. to use bridges 94.26 over Columbia River at mileage 38.7, and over Bull River at mileage 9.2, Kootenay Central Ry., B.C.

25457. Sept. 22.—Approving Toronto, Hamilton & Buffalo Ry. Standard Mileage Freight Tariff, C.R.C. 1113, cancelling C.R.C. 1, applying between stations on its line issued Sept. 15.

25458. Sept. 23.—Authorizing C.P.R. to build two spurs for Curtis & Harvey, Ltd., Rigaud Parish, Que.

25459. Sept. 20.—Authorizing G.T.R. to build siding for B. Blair Co., Woodstock, Ont.

25460. Sept. 22.—Ordering G.T.R. to build farm crossing for O. Murphy, Victoria Road, Ont.

25461, 25462. Sept. 22.—Authorizing C.P.R. to use bridges at mileage 59.8 over Findlay Creek, and at mileage 46.62 over Skookumchuck Creek, Kootenay Central Ry.

25463. Sept. 22.—Authorizing G.T.R. to use bridge 180, at milepost 122.90, District 3, Montreal Division, Que.

25464. Sept. 25.—Ordering that railway companies interested establish with as little delay as possible, a joint rate of 47c a ton to apply on coal in carloads from Niagara frontier to Thorold and St. Catharines for Niagara, St. Catharines and Toronto Ry. delivery, to be apportioned between the two companies as follows—27c a ton to M.C.R. and 20c a ton to N. St. C. & T. R.

25465. Sept. 25.—Authorizing City of Toronto to extend its street railway across G.T.R. by bridge authorized under order 24788 and authorizing City and G.T.R. to operate over and under said bridge, respectively.

25466. Sept. 25.—Extending for three months from date, time within which C.P.R. shall install bell as directed by order 25184, July 24.

25467. Sept. 22.—Authorizing Canadian Northern Ry. to remove its agent at Gooderham station, Ont., station to be kept clean and heated for passengers, and to care for l.c.l. freight and express matter; telephone connection to be maintained for transmission by caretaker to agent at Bancroft of any messages necessary in connection with operation of railway.

25468. Sept. 23.—Approving Dominion Atlantic Ry. plan showing location and details of new passenger station and freight shed at Middleton, N.S.

25469. Sept. 23.—Authorizing Grand Trunk Pacific Ry. to build spur for Island Lake Coal Co. at mileage 839.9 west of Winnipeg, Alta.

25470. Sept. 27.—Authorizing C.P.R. to build spur for Russell Motor Car Co., Toronto.

25471. Sept. 27.—Authorizing G.T.R. to build siding for Kingston Shipbuilding Co., Kingston, Ont.

25472. Sept. 27.—Dismissing application of C. R. Harris & Son, Toronto, for order requiring C.P.R. to deliver milk and cream as before at Parkdale station and not West Toronto, which latter is inconvenient to applicant.

25473. Sept. 27.—Extending to Dec. 1 time within which C.P.R. shall install gates at Dorchester St. Quebec, pending installation C.P.R. to place watchman at crossing between 7 a.m. and 6 p.m.

25474. Sept. 27. Amending order 25246, July 27, re Quebec Oriental Ry. shelter between Caplin and Bonaventure, Que.

25475. Sept. 27.—Ordering Canadian Northern Ry. to build farm crossing for T. Boughen, near Swan River, Man.

25476. Sept. 27.—Authorizing C.P.R. to build spur for Dominion Timber & Minerals, Ltd., Grenville Tp., Que.

25477. Sept. 27.—Authorizing Michigan Central Rd. to build spur for H. J. Heinz Co., Leamington, Ont.

25478. Sept. 27.—Authorizing C.P.R. to build spur at Riverton, Man., for Sigurdson, Thorvaldson Co.

25479. Sept. 28.—Approving deviation of Toronto, Hamilton & Buffalo Ry., from Lot 19, Con. 1, from Grand River, Sherbrooke Tp., Ont., station 912 + 68 to 1008 + 18; and location from Lot 17 to east bank of Grand River, Port Maitland, station 1008 + 18 to 1013 + 37.

25480. Sept. 28.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.), to open for traffic portion of its line from Kettle Valley Ry. to Canadian Northern Pacific Ry. at Hope, B.C., 900 ft.

25481. Sept. 27.—Authorizing City of Montreal to build foot subway under C.P.R., in line with Melrose Ave.

25482. Sept. 29.—Authorizing Canadian Northern Ry. to build spur to gravel pit in Secs. 10, 15, and 22-15-12, w.2 m., near Kendal, Sask. and to cross highway between Secs. 10 and 15.

25483. Sept. 29.—Approving Canadian Northern Ontario Ry location in Port Arthur from mileage

1.57 to 1.88; and authorizing it to build two sidings for Saskatchewan Co-operative Elevator Co. and Grain Growers' Grain Co.

25484. Sept. 30.—Authorizing highway crossing over C.P.R. about 125 ft. west of First Ave., Oak Lake, Man.

25485. Sept. 30.—Ordering C.P.R. to build interchange track with Grand Trunk Pacific Ry. at Moose Jaw, Sask.; G.T.P.R. to contribute \$2,500 toward cost, reserving for further consideration cost of maintenance and rescinding orders 24797, March 16, and 25400, Sept. 11.

25486. Oct. 2.—Ordering C.P.R., within 60 days to install bell at Boulevard Gouin, Bordeaux, mileage 9.91, Ottawa Subdivision, Que., and maintain it at own expense; 20% cost installing to be paid out of Railway Grade Crossing Fund, remainder by company.

25487. Oct. 2.—Approving G.T.R. plan of proposed improvements to freight facilities at Windsor, Ont., to be completed by Dec. 31, 1916.

25488. Oct. 2.—Authorizing Northern Development Branch, Ontario Government, to construct trunk road across C.P.R. main line on boundary between Pedley and Springer Tps., mileage 21.28, Cartier Subdivision, and rescinding order 25219.

25489. Oct. 2.—Authorizing Canadian Northern Ry. to construct access highway between Secs. 7 and 8-18-7, e.p.m., Man.

25490. Oct. 3.—Ordering G.T.R. to erect station building at Eganville, Ont., by Dec. 1, 1916.

25491. Oct. 2.—Authorizing Town of Preston, Ont., to construct South St., across G.T.R., by a subway.

25492. Oct. 3.—Authorizing C.P.R. to replace 8-ft. through plate girder span over Muddy Creek, mileage 41.10 St. John Subdivision, with 8 x 8 ft. cement rail culvert.

25493. Oct. 3.—Approving location and detail plans of proposed remodelling G.T.R. passenger station at Dominion, Lachine, Que.

25494. Sept. 23.—Authorizing G.T.R. to build siding for Canadian Crocker Wheeler Co., St. Catharines, Ont., and change existing siding. Approving and authorizing vertical and lateral clearances, subject to G.T.R. undertaking to keep employees off tops and sides of cars when operating siding.

25495. Oct. 5.—Extending, until Dec. 1, 1916, time within which G.T.R. complete station at Mimico, Ont.

25496. Oct. 3.—Approving agreement between Bell Telephone Co. and Mount Horeb Telephone Association, Sept. 2, 1915.

25497. Oct. 5.—Authorizing C.P.R. to build spur for Western Co-operative Grain Co., Calgary, Alta.

25498. Oct. 5.—Amending order 25466, Sept. 25, re C.P.R. bells at Crawford's and Pardy's Crossings between Westfield and Hillandale, N.B.

25499. Oct. 5.—Authorizing Alberta Public Works Department to build crossing over C.P.R. in Sec. 12-43-10, 4.

25500. Oct. 4.—Authorizing C.P.R. to build scale track, 950 ft. long, for Wayagamack Pulp & Paper Co. on Bellefleur Island, Cap de la Madeleine Parish, Que.

25501. Oct. 6.—Extending to Nov. 19, time within which C.P.R. shall install bells at St. Francois and St. Antoine Sts. Rigaud, Que.

25502. Oct. 5.—Authorizing G.T.R. to build spurs for Toronto Harbor Commissioners, in Toronto Harbor industrial district.

25503, 25504. Oct. 6.—Authorizing G.T.R. to rebuild bridges over Rawdon Creek, milepost 16.14 from Belleville; on lot 3, Con. 2, Rawdon Tp., and bridge 34, milepost 66 from Belleville, Ont.

25505. Oct. 5.—Authorizing Canadian Northern Ontario Ry. to build bridge over Current River, Port Arthur, Ont.

25506, 25507. Oct. 3, 6.—Approving agreements between Bell Telephone Co. and Jackson Telephone Association, June 9, and Clavering Telephone Association, July 20, 1915.

25508. Oct. 5.—Ordering Canadian Northern Ry. to build flat station and siding, with cattle pen and loading chute, at Twin Elm, Ont.; to provide passenger service; and to take up shipments of milk and cream and express matter, in addition to handling passenger traffic offering; work to be completed by Dec. 31.

25509. Oct. 10.—Authorizing Canadian Northern Ry. to alter bridge over South Magnetawan River, mileage 34.86 from Parry Sound, Ont.

25510. Oct. 7.—Authorizing Canadian Northern Quebec Ry. to build extension of Standard Lime Co.'s tracks in lot 426, Parish St. Paul de Joliette.

25511. Oct. 10.—Dismissing application of residents and ratepayers of Torrance, Ont., for order directing Canadian Northern Ry. to build road in lieu of road closed in lot 24, Con. 27, Wood Tp., Ont.

25512. Oct. 4.—Authorizing C.P.R. to remove station agent at Moyie, B.C.

25513. Oct. 10.—Authorizing C.P.R. to operate trains over crossing of its Lac du Bonnet Subdivision and Berens Northeast cutoff at Murdock, Man., without first stopping trains.

25514. Oct. 10.—Amending order 25396, Sept. 8, re Saskatchewan Government crossing of Grand Trunk Pacific Branch Lines Co.'s right of way at Bechard Station.

25515. Oct. 11.—Relieving C.P.R. from providing further protection at crossing of side road 1 1/4 miles south of Berkeley, Ont.

25516. Oct. 10.—Authorizing C.P.R. to build spurs for Saskatchewan Co-operative Elevator Co., Port Arthur, Ont.

25517. Oct. 10.—Authorizing C.P.R. to build spur 890 ft. long for Canadian Tube & Iron Co., Montreal.

25518. Oct. 10.—Ordering G.T.R. to build farm crossing for A. Desilets, Breault Mill, Que.

25519. Oct. 10.—Authorizing Grand Trunk Pacific Ry. to build two highway crossings in lot 1169 and 6340, R. 5, Coast District, B.C.

25520. Oct. 11.—Authorizing Brantford & Hamilton Electric Ry. to establish its Brantford passenger station at Lake Erie & Northern Ry. station near Lorne Bridge, Brantford, and to extend its tracks from Market St. to L.E. & N.R. station.

25521. Oct. 12.—Authorizing Canadian Northern Ontario Ry. to build spur for J. C. Wilson & Co., Belleville, Ont.

25522. Oct. 10.—Approving Maine Central Rd. bylaw passed Sept. 13.

25523. Oct. 14.—Authorizing Central Vermont Ry. to build siding and passing track to Lime Stone Quarry, lot 230, R. 9, Stanbridge Tp., Que.

25524. Oct. 13.—Authorizing C.P.R. to build access highway on eastern boundary of n.w. 1/4 Sec. 32-35-11, w.3m., at Perdue, Sask., mileage 370 of its Pheasant Hills Branch.

25525. Oct. 13.—Authorizing C.P.R. to build diversion of road allowance on southern limit of s.w. 1/4 30-13-6, w.2m., at Windhorst, Sask.; and to extend Van Horne St. across its tracks, Sec. 25-13-7.

25526. Oct. 13.—Ordering Canadian Northern Ry. to install agent at Sturgis, Sask., by Oct. 20.

25527. Oct. 13.—Disallowing proposed increase from \$3 to \$5 a car in charge for stopping cars containing part carloads canned goods in transit for completion of loads.

25528. Oct. 12.—Relieving G.T.R. from providing further protection at highway west of Beamsville, Ont.

25529. Oct. 13.—Authorizing Canadian Northern Ontario Ry. to build spur for Hout Paper Mills, Ltd., Camden Tp., Ont.

25530. Oct. 13.—Relieving Canadian Northern Ry. from providing further protection at Chatham Road, St. Jerusalem Parish, Que.

25531. Oct. 11.—Authorizing Canadian Northern Ontario Ry. to cross C.P.R. with double track in lot 13, Con. 2 from bay, York Tp., Ont.; and to cross Park Drive, lot 13, Con. 2.

25532. Oct. 13.—Amending order 25451, Sept. 21, re C.P.R. crossing of Level St., Churchville, Manitoba, by substituting Saskatchewan for Manitoba.

Canadian Pacific Railway Construction, Betterments, Etc.

Ontario District.—We are officially advised that it is not the intention to electrify the Kingston and Pembroke Ry. as reported in the daily papers.

Local press reports state that the building of a branch line from Linwood on the Guelph and Goderich Ry. to Wellesley, about 9 miles, is being considered.

Manitoba District.—The Winnipeg City Council has approved of the plans for umbrella roofs to be erected on the platforms over the Main Street subway stipulating that nothing be added in the shape of walls, etc. The umbrella roofs referred to will be a culmination of those over the station platforms.

Saskatchewan District.—The Board of Railway Commissioners has directed the C.P.R. to build an interchange track with the Grand Trunk Pacific Ry. at Moose Jaw, Sask., this company to pay \$2,500 towards the cost. The cost of maintenance of the track is reserved for future consideration.

Alberta District.—The Sterling division has been extended from Foremost easterly to Pakowki, Alta., 22.2 miles, by the opening for traffic of that section of the line generally known as the Weyburn-Lethbridge line. The extension from Pakowki to the Alberta-Saskatchewan boundary, where track from the east at present terminates, is under construction. Tracklaying on this extension was reported to have been started Oct. 12.

British Columbia District.—It is reported that the Connaught Tunnel, on the main transcontinental line at Rogers Pass will be opened for traffic Dec. 1.

The Board of Railway Commissioners has authorized the company to use the following bridges erected on its Kootenay central subdivision recently, viz.: over Columbia River, mileage 94.26; over Kootenay River, mileage 38.7; over Bull River, mileage 9.2; over Findlay Creek, mileage 59.8; over Skookumchuck Creek mileage 46.62.

In connection with the increasing of the company's dock accommodation at Vancouver, F. W. Peters, General Superintendent, is reported to have said, Oct. 7, that the extension of the present pier is merely the quickest means of providing additional facilities and does not in any way conflict with the original plans for the construction of Pier B, which is now projected. The extension of Pier A to the harbor line merely means that this work will be done first in order to provide additional berths and warehouses for trans-Pacific business.

The construction of Pier B as originally planned will not in any way be interfered with. The general plans provide for the building of piers lettered from A to G, and they will all be provided as business requires. It is also the company's intention to remove the old detention shed and make improvements at Pier A by building an extension on to the east end of no. 1 freight shed. Pier D is filled out to the harbor line and marked for quite a distance of the 400 ft. addition by dolphins. The lines of construction for the addition will be in conformity with the style of the present pier, which is of steel framework. The extended pier will provide accommodation for three or four of the company's ocean water vessels. (Oct., pg. 403.)

Steel Rails and the Customs Duty.

Canadian Railway and Marine World for October contained a press dispatch from Ottawa stating that it was understood that an arrangement had been made with regard to supplying rails required by Canadian railway companies which would satisfy temporarily the urgent requirements of the various railway systems. No definite announcement has been made as to the terms of the arrangement. We understand that some weeks ago the Canadian Northern Ry. represented to members of the Dominion Government that it was unable to procure rails from Canadian mills for prompt delivery for important work and made a request that the duty be suspended temporarily so as to enable it to bring in a moderate tonnage. It is said that the C.P.R. made similar representations.

Both the Algoma Steel Corporation and the Dominion Iron & Steel Co. are running practically all the time on steel bars for the Imperial Munitions Board, the Board having told them that it expects to get practically their entire outputs for the next six months to come.

It is said that the C.P.R. has not purchased any rails in the United States as yet, and may not do so, as it may be able to secure a small tonnage in Canada for early shipment. One reason for its not having placed an order in the U.S. probably is that it is impossible to obtain open hearth rails there for delivery earlier than Sept. or Oct. 1917, and the C.P.R. will not use any other grade. It is possible the Canadian Northern may bring in some Bessemer rails from the U.S., it being possible to secure them for fairly early delivery, provided the Canadian customs duty is temporarily suspended.

Canadian Pacific Railway Company's Annual Meeting.

At the annual meeting in Montreal, Oct. 4, the President and Chairman, Lord Shaughnessy, in moving the adoption of the report for the year ended June 30, which was published in Canadian Railway and Marine World of October, said:

"The information contained in the report with reference to the outcome of the company's operations during the year, and the condition of its affairs generally, must be as gratifying to the shareholders as it is to the directors. While the gross income from the business of your railway lines was below the maximum that had been reached, the net revenue was in excess of any previous year. The statements and statistics give evidence of improved operating effectiveness and of greater financial strength and stability.

"Although the amount of the taxes that the company may be called upon to pay in Great Britain and Canada in connection with special war assessments is not as yet definitely determined, it will, no doubt, be considerable, and prudence suggests preparation to meet it. Then, as you are aware, most of your ocean steamships have during the past two years been engaged in Admiralty service. Some of them were lost, although in this respect we have been singularly fortunate, some were taken over by the Admiralty, and the character of the service that the others have been performing will make extensive rebuilding necessary whenever the steamships are released. To make provision for these excess war profit taxes and other war assessments that the company may be required to pay, and for the rehabilitation of your ocean fleets at the prices now current and that are likely to prevail for some time to come, the directors decided to transfer to a fund for contingencies a very substantial sum that would in other circumstances have gone to special income. I am confident that this policy will meet with your hearty approval.

"It is very comforting to know that on June 30 last the cash in hand, including the temporary investment in war loans, readily convertible, was nearly \$47,000,000, or about \$20,000,000 more than at the end of the previous fiscal year, although of any description had been disposed of, but, of course, important works requiring large expenditure, that were not immediately necessary, were postponed until a more opportune time. In addition to the cash in the treasury you have available for sale upwards of \$40,000,000 of 4% consolidated debenture stock for additional railway mileage built with funds advanced by the shareholders.

"In the opinion of the directors the time has arrived when the company should arrange to carry its own fire and marine insurance, or the greater portion of it, instead of paying large annual premiums as at present. To that end, a transfer of \$231,000 was made to the fund last year, and further transfers will be made year by year until the fund is sufficient for the purpose in view.

"In Eastern Canada the outcome of farming operations this year was generally satisfactory, but the grain crops in portions of the western provinces were injuriously affected by unfavorable weather conditions during the late summer, and it is now thought that the total yield will be little more than half of last season's phenomenal crop. These conditions

will naturally be reflected in the company's revenue returns during the next year, but general business is showing decided improvement, and in any event there is every reason to expect that the company's net income for the year will be quite sufficient to meet the ordinary dividend distribution without encroaching on the surplus of previous years.

"The progress and prosperity of your company during the past few years tempted other railway companies to enter the field, and they received encouragement and support from the Dominion and provincial governments in the shape of cash bonuses and guaranteed securities, with the result that hundreds of millions of dollars were invested in railway lines throughout Canada, many of them in territory already served by your railway, years before they were required or could be made self sustaining. It has been necessary for the government on more than one occasion to come to the aid of these companies by advancing large amounts of money to prevent liquidation and collapse. As a consequence, a situation fraught with some anxiety and apprehension has developed. Within the last few months a board of inquiry, composed of expert and capable men has been selected by the Dominion Government to study every phase of the railway problem, and to make a report incorporating suggestions and advice that may serve to guide the Government in dealing with the subject hereafter. It is to be regretted that a board of this kind was not asked to give information and advice before these large expenditures and obligations were incurred, rather than afterwards, but there is little doubt that its report and recommendations will be very useful to Parliament and the Government.

"I cannot too highly commend the vice presidents and their assistants for the splendid organization, the intelligence and energy that were manifest in every branch of the company's service, and to which may be attributed the very gratifying outcome of the year's business.

"The vacancy in the board of directors caused by the death of Sir Sandford Fleming has not been filled. Your directors recommend that Sir Vincent Meredith, Bart., be elected a director to fill the vacancy, and his name will appear on the ballot paper to be submitted to you today."

Prior to the adoption of the resolution approving of the report, Huntly Drummond, a shareholder, stated that he desired on behalf of the shareholders to express their gratification at the satisfactory results of the year's operations, which could only be attributed to the wisdom and foresight exercised by the President and the remarkable esprit de corps which was known to exist throughout the company's service. He also referred to the enormous assistance the company's organization had been in matters connected with the prosecution of the war and to the generosity of the company and its employees in their contributions to the patriotic fund and for other war purposes. He concluded his remarks by referring to the anxiety that was felt amongst the shareholders at rumors which had been current for some little time past of the possibility of the retirement of Lord Shaughnessy from the presidency. He stated that in his opinion,

which he felt was generally shared, it was of vital importance that Lord Shaughnessy should continue to direct the company's affairs and suggested, if he was not on too delicate ground, that it would be very reassuring to the shareholders if Lord Shaughnessy would make some statement on the subject.

Lord Shaughnessy, after thanking Mr. Drummond for his expression of appreciation, stated that there were two factors to be considered in the selection of a president, namely, the board of directors and the person who might be named, but that if the directors at the meeting to be held after this meeting were to ask him to be President of the company he would be very pleased to accept, and that if a year from now they again proposed that he should be President, he would be very glad to serve. He did not think any man at his time of life should predict beyond two years. The President referred to his 34 years connection with the company, 17 of them as President, and the splendid organization which the company possessed and in which he personally took much pride. He mentioned that many of his assistants and advisers on the staff had been with him from the beginning. Indeed, some of those now holding positions of greatest responsibility he had known when they started as boys in the company's service. He assured Mr. Drummond and the shareholders that so long as he was mentally and physically capable his services would always be at their command.

His reply was received with loud cheers.

The following resolutions were unanimously adopted:

Toronto, Hamilton and Buffalo Ry.—
Whereas an agreement has been entered into, dated Feb. 1, 1916, between the Toronto, Hamilton & Buffalo Ry. Co., the Michigan Central Rd. Co., the Canada Southern Ry. Co., the New York Central Rd. Co., and this company, providing for the interchange of traffic between the several companies parties to the agreement and for the issuance from time to time by the Toronto, Hamilton & Buffalo Ry. Co. (but only with the consent in writing of the Michigan Central, Canada Southern, New York Central and Canadian Pacific Companies) of bonds not exceeding in the aggregate \$10,000,000, bearing interest not exceeding 5% per annum, such bonds to be secured on the property and assets, present and future, of the T. H. & B. R. Co., subject however to the mortgage dated June 1, 1896, and to be unconditionally guaranteed by the Michigan Central, Canada Southern, New York Central and Canadian Pacific Companies, the said agreement providing that if the earnings of the T. H. & B. R. Co. are not sufficient to provide for the payment of any of the interest on the bonds, the deficit shall be borne by the other companies parties to the agreement in the proportions therein mentioned; now therefore be it resolved that the said Agreement be approved and the execution thereof by the President and Secretary of the company be ratified and confirmed.

Canadian Pacific Ocean Services, Ltd.—
Whereas by resolution passed at the annual meeting of shareholders on Oct. 6, 1915, the sale of the shares of the Allan Line Steamship Co. held by this company and the transfer of the several

NOVEMBER, 1916.]

CANADIAN RAILWAY AND MARINE WORLD.

steamships named in the schedule attached to the resolution and other property therein mentioned to the Canadian Pacific Ocean Services, Limited, was ratified and confirmed to be effective from Nov. 1, 1915, or from such later date as the directors might determine; and whereas by agreement dated Dec. 7, 1915, approved by the directors on Dec. 13, 1915, the effective date of such sale and transfer was deferred to a date to be fixed by agreement between this company and the Canadian Pacific Ocean Services, Limited, and the last named company was appointed manager and agent to operate and manage the steamships of the Allan Line Steamship Co. and of this company; And whereas the conditions pertaining to ocean traffic may render it desirable in the company's interests that in giving effect to the proposals previously approved a somewhat different plan should be adopted, and it is desirable to authorize and empower the directors to take such action as may be deemed advisable in the premises; Therefore, be it resolved that the agreement dated Dec. 7, 1915, providing for the operation of the fleets of this company and of the Allan Line Steamship Co. by the Canadian Pacific Ocean Services, Limited, as manager and agent, be ratified and approved. And be it further resolved that the directors be and they are authorized to give effect to the resolution passed at the last annual meeting relating to the sale of the shares of the Allan Line Steamship Co. held by this company and the transfer of the several steamships and other property therein mentioned by completing the sale and transfer therein authorized either to the Canadian Pacific Ocean Services, Limited, or to some other company created for that purpose in which this company shall have full ownership and control, in such manner and at such times and upon such conditions as to them seem proper.

Bylaw 91, which names the officers of the company authorized to prepare and issue tariffs of the tolls to be charged for the carriage of freight amended by the substitution of the name of H. D. Macdonnell for that of W. B. Bulling, as Assistant Freight Traffic Manager, Eastern lines.

The three retiring directors, G. Bury, W. D. Matthews, and A. M. Nanton were re-elected for one year. Mr. Meredith, President Bank of Montreal was elected a director for 4 years to succeed Mr. Bulling.

At a meeting of directors held immediately after the shareholders' meeting Lord George Bury, Vice President, and E. W. Beatty, K.C., Vice President and General Counsel, and the following were appointed the executive committee: R. B. Angus, E. W. Beatty, K.C., George Bury, Sir Herbert S. Holt, Sir Edmund B. Osler, M.P., Lord Shaughnessy.

Board of Motion Pictures.—The Ottawa Court of Revision decided, Oct. 13, that the salaries of members of the board of motion pictures of the city. The decision was the result of an appeal made by D'Arcy Scott, Assistant Chief Corporation Counsel, and the board of the motion picture industry, on the part of the city and the Government, by which the city agreed to make no claim for taxes on the income of officers and members of the Government derived from the Government.

Resumption of Grand Trunk Preference Dividends.

After an interval of two years the G.T.R. has resumed payment of dividends on part of its preference capital. For 1913 the full dividends, interim and final, were paid on its first and second preference stocks, while 2½% was distributed on its third preference stock. For 1914 and 1915, nothing was paid on any of the preference stocks, while for 1916 only 1½% was paid on the first and second preference stocks.

Thanks to the considerable improvement in earnings this year, the directors, while paying the full interim dividend of 4% per annum on the guaranteed stock (as against only 3% per annum a year ago), are able to recommend an interim dividend of 1½% per annum on the first preference stock.

The directors are also empowered to pay a dividend of 1½% per annum on the second preference stock, and to pay a dividend of 1½% per annum on the third preference stock, subject to the net receipts of the parent company in the year. The directors are also empowered to pay a dividend of 1½% per annum on the first preference stock, and to pay a dividend of 1½% per annum on the second preference stock, and to pay a dividend of 1½% per annum on the third preference stock, subject to the net receipts of the parent company in the year.

No doubt had they deemed it prudent to do so the directors could have distributed a dividend of 1½% per annum on the first preference stock, and to pay a dividend of 1½% per annum on the second preference stock, and to pay a dividend of 1½% per annum on the third preference stock, subject to the net receipts of the parent company in the year.

until the results for the completed year are known. As regards the payment of dividends on the junior preference issues, the directors are empowered to pay a dividend of 1½% per annum on the first preference stock, and to pay a dividend of 1½% per annum on the second preference stock, and to pay a dividend of 1½% per annum on the third preference stock, subject to the net receipts of the parent company in the year.

progress, though the gain in net profits

in July was small in proportion to the expansion in gross receipts. However, the net earnings of the main line for the entire year should show a considerable improvement, and as the parent company will not have to make good heavy deficits of its subsidiaries, as in 1915, there ought to be a considerable amount available for distribution on the company's preference stock after additional capital charges have been provided for.

Toronto Terminal Railway Co's Annual Meeting.

The adjourned annual meeting of the Toronto Terminal Ry. Co. was held at the G.T.R. general offices, 1100 St. Lawrence St., H. G. Kelley, President, presiding. Good progress was made in the distribution of

the company's assets, and the directors were authorized to pay a dividend of 1½% per annum on the first preference stock, and to pay a dividend of 1½% per annum on the second preference stock, and to pay a dividend of 1½% per annum on the third preference stock, subject to the net receipts of the parent company in the year.

Directors were elected as follows: George Bury, I. G. Ogden, and E. W. Beatty, K.C., and the following were appointed the executive committee: R. B. Angus, E. W. Beatty, K.C., George Bury, Sir Herbert S. Holt, Sir Edmund B. Osler, M.P., Lord Shaughnessy.

Grain in Storage at Terminal Elevators. Decrease Reported Since Last Year.

Co.

Commission of Enquiry into Railways and Transportation.

The Chairman of the commission, A. H. Smith, President of the New York Central Lines, and Sir Henry Drayton arrived in Ottawa Oct. 8, on their return from an inspection trip over Canadian Northern, Grand Trunk Pacific and National Transcontinental lines as far as the Pacific Coast.

William Mitchell Acworth has been appointed a member of the Commission, in succession to Sir George Paish, who was compelled to relinquish the appointment on account of ill health. He was born near Bath, Somersetshire, Eng., Nov. 22, 1850. He is a barrister, M.A. (Oxon), and was a member of the London County Council from 1889 to 1892, and was a candidate for Parliament for the Keighley Division of Yorkshire in 1906, 1910 and 1911. Following are a list of committees connected with transportation of which he has been a member:—1895, Board of Trade Committee on Light Railways; 1899, Royal Commission on Accidents to Railway Servants; 1906, Vice Regal Commission on Irish Railways, and Committee on Railway Accounts and Statistics. He is a member of the council of the Royal Economic and Royal Statistical Societies, and of the executive committee of the Tariff Reform League, and Chairman of the London United Tramways Co. He is the author of several works on railways, including Railways of England, 1889; Railways of Scotland, 1890; Railways and the Trader, 1891, and Railway Economics, 1905. He was, from 1895 to 1904, lecturer on Railway Economics at the London School of Economics.

The Commission's Staff.

As stated in a previous issue, no information is obtainable from the commissioners as to the staff employed. As already announced, Prof. G. F. Swain and W. H. Chadburn have been brought in from the United States. Prof. Swain is apparently not spending much time in Canada, but is directing the work from Boston, Mass., W. H. Chadburn being his principal assistant at Ottawa, while A. Buchanan, formerly of the New York Central Lines, is looking into rolling stock questions. W. P. Kellett, who was Chief Engineer of the Lake Erie & Northern Ry. during most of its construction, and who is now President of the Dominion Steel Products Co. at Brantford, Ont., has been engaged in connection with the engineering work and is going to inspect the lines to the Pacific coast. A. H. N. Bruce, M. Can. Soc. C.E., formerly Chief Engineer, Quebec & Saguenay Ry., is said to have also been appointed on the engineering staff.

Geo. F. Swain's record is as follows:—Born, Mar. 2, 1857, in San Francisco, Cal. Graduated in 1877 from Massachusetts Institute of Technology, Department of Civil Engineering. Studied in Polytechnic School at Berlin, 1877, 1880. 1880-1884, hydraulic expert, 10th United States Census. 1887-1907, Professor of Civil Engineering, Massachusetts Institute of Technology, in charge of the department. 1909 to date, Gordon McKay Professor of Civil Engineering, Harvard University. 1887-1914, Consulting Engineer, Massachusetts Railroad Commission. 1894 to date, member Boston Transit Commission; since June, 1913, Chairman of the commission. 1904, member of commission to revise building laws of City of Boston. 1908, member, National Con-

servation Commission. 1911, member joint commission to consider and report on transportation improvements in Metropolitan District, including steam and electric railways, and port developments. 1910, expert employed by State Board to validate assets and liabilities of New York, New Haven & Hartford Rd. 1911, made valuation of New York Central Rd., 1912, expert on valuation of Chicago Elevated Railways; also made valuation of two small railways. During the last 20 years he has been consulting engineer for a large number of engineering projects, having designed and superintended construction of quite a number of bridges of various types. Has been expert in quite a number of cases involving bridges, railway matters, docks, and other engineering problems. Has also been a member of a large number of special commissions, including 15 or 20 commissions appointed to decide manner and apportion the cost of abolishing grade crossings of highways and railways, including a considerable number of large projects, such as those at Worcester, Waltham, Taunton, Newton, Somerville, and many other cities and towns in the United States. 1913-1914, Consulting Engineer for City Cincinnati on project for subways. Has also been employed by various States and municipalities on engineering projects of various kinds. 1916, member of board of arbitration on plan for reconstruction of Galveston causeway. 1913, President, American Society of Civil Engineers. Is a member of the American Society of Mechanical Engineers, American Institute of Consulting Engineers, Canadian Society of Civil Engineers, Institution of Civil Engineers of Great Britain, Society of Engineers and Architects, Hanover, Germany, Boston Society of Civil Engineers (Ex-President), American Railway Engineering Association, American Society for Testing Materials, and many other professional societies.

The following memorandum has been issued from the Prime Minister's Office in Ottawa:—"The government are in receipt of many communications which have reached them in consequence of a circular issued by the Canadian Society of Civil Engineers on Sept. 7, copy of which is hereto appended. [Editor's Note.—This circular was published in Canadian Railway and Marine World for October.]

"It is the policy of the government to employ Canadians for all public purposes; but having regard to the magnitude and seriousness of the questions which confront the government with regard to the railways, they have not been disposed to dictate to the commissioners in the selection of the best available assistance on this continent or elsewhere. Indeed the government could not expect the commissioners to undertake the very arduous and important task which has been set before them, unless they were given a free hand in such matters. The Prime Minister has called upon Sir Henry Drayton for a full report in respect of the matters set forth in the Canadian Society of Civil Engineers' circular, and that report has just been received. A copy is hereto appended."

Sir Henry L. Drayton's Report.

The following letter from Sir Henry L. Drayton, K.C., Chief Railway Commissioner for Canada, and one of the Commissioners of inquiry into railway and transportation, was dated: "On Private

Car Acadia, Port Arthur, en route west, Sept. 19," and addressed to Sir Robert Borden.

"A copy of the circular of protest issued by the Canadian Society of Civil Engineers on the question of the appointment of Prof. Swain, of Harvard University, who is an American engineer, has been forwarded to me. In case you have not already got one, I enclose copy herewith. I understand, rightly or wrongly, that some 3,000 of these circulars have been issued; and, as the object of the circular is to have all those circularized write the members of parliament and to take up the question with those whom they believe to have influence in Ottawa, I have no doubt that the question is one which will be called to your attention with more or less regularity and insistence. I, therefore, think that while the appointment by the commission of investigation of their assistants is of necessity a matter for that commission, and that no apologies are required for the appointment of Prof. Swain, it is but fair that I should write you my position in the matter. The question was first brought to my attention by R. A. Ross, an electrical engineer of much eminence, with whom I have been personally associated in the past in connection with hydro electrical matters. At the outset, I desire to say that I have a very high opinion of Mr. Ross' engineering skill and knowledge and honesty of purpose. He writes:—

"As you are the only Canadian on that board and I am an engineer without knowledge of railway matters and therefore free to speak without my motives being misunderstood, I may say that it has been common practice in Canada whenever investigations were carried on which were really worth while taking up, to call in foreign engineers and that I sincerely hope that your board is not going to continue this practice which will result in a horde of probably several hundred American engineers being landed in this country to do work for which our Canadian engineers are better fitted both by training and actual experience. Canadian engineers can and do go to the States and obtain a preference there because they are Canadians and are well trained and reliable and there is abundant material still in this country to cover the present requirements. At the present there are many engineers out of work in Canada and who have had to go to the States for the same reason or who have enlisted, all of whom are our own citizens who will have to bear the burden not only of war costs but of the railways at present under consideration. Of course I realize that this dispatch may not be correct, but previous actions of the governmental bodies have indicated the possibility of its truth, hence this protest to the only Canadian member of the board. May I also add that from what I hear the personnel of the board itself appears to be thoroughly acceptable to every one and personally I wish you every success in this very important undertaking."

"I am entirely free to admit my personal preference in favor of the local men, many of whom I know and have come in contact with in business. It occurs to me, however, that in a position of the present magnitude, and, indeed, as a matter of common duty, the only proper thing to do is to ignore all personal predilections, acquaintances, and the like, and get the best men available, whoever they may be. The question is certainly large enough and the urgency sufficiently real. Every consideration was given Mr. Ross' letter before Prof. Swain's appointment was made. I note that the circular refers to his appointment as a particularly flagrant case. I, therefore, should say something about him. Strangely enough, he happens to be a member of the protesting society. He became a member in Jan., 1913, being himself at the time President of the American Society. I should also say that he is a member of many years' standing of the

British Institution of Civil Engineers.

"The circular states that competent constructing and operating engineers have been passed over in favor of alien engineers. Prof. Swain has not been appointed for any such work, or for advisory work as to the methods of construction or methods of operation. Rightly or wrongly, the commission thinks that, in order to report properly to parliament, some knowledge should be had as to what the actual investment in railways means, and what the physical value of the lines under consideration, to the extent possible in view of the limited time available, is. No general valuation has ever been made in Canada, although in a few instances I believe it to be a fact that railways, for their own purposes, have made partial valuations. The question is a particularly complicated one, the mere compilation of necessary data, scales, etc., entailing the expenditure of a large sum of money, the employment of a comparatively large staff, and some six months of time itself. Prof. Swain is thoroughly familiar with this work and had much data already in hand and available. Under the United States legislation of 1913, the duty was thrown on the Interstate Commerce Commission of making a physical examination of American lines, and the work, merely preliminary, in 1914 cost \$456,565. In 1915, the cost amounted to \$2,131,935. It has been stated that the actual work of valuation will take upwards of 10 years and will cost millions of money. No such work, of course, has ever been undertaken in Canada. In so far as the railways themselves are concerned, as the result of inquiry, the only valuation that I can find that was made in detail was one which was made in 1910-11 by the C.P.R. for a portion of its line. That company has always been looked upon as a characteristic Canadian company and is noted for its praiseworthy policy of employing Canadians wherever possible. The work, however, being entirely new in Canada, I find that in this instance, the Canadian Pacific itself went to the States for engineers who had the necessary experience to do the work. So far as Prof. Swain is concerned, he has been in touch with this work since its inception in the States, and, without going into details of his work, it is sufficient to state that in 1910-11 he was in charge of the valuation of the physical properties of the New York, New Haven & Hartford Rd., and in 1911-12 of the New York Central Lines.

"Over and above all this there is the obvious objection to the appointment of a Canadian engineer which the circular itself recognizes. It states:—

"It may be argued in support of the present alien appointment that Canadian engineers are not acceptable because many have been in the employ of the railway companies. To this we would reply that, as the commission itself is to advise the government, basing itself upon the engineering data given to it, any experienced engineers are competent to collect and submit the necessary information to the commission."

"In so far as the answer is concerned, if the information supplied to the commission by an engineer was formed from an improper basis, it certainly would be of no use unless acted upon by the commission, and if acted upon by the commission would be just as objectionable as if made by the engineer to the government itself. The circular might have gone further in its statements and frankly admitted that all Canadian railway engineers of standing have been some time or other, or are now, in the employment of railway companies. A glance at the members of the council issuing the circular will show how neces-

sary the admission that the society makes, was. There are on the council two Canadian Pacific engineers, two Grand Trunk engineers, two Canadian Northern engineers, as well as engineers on the Intercolonial or National Transcontinental systems. Taking any of the council's representatives in so far as the members interested in railway work are concerned, their connection in the past or present with the Canadian lines is beyond all doubt. Besides the matter of public interest in having an entirely unprejudiced report, the interests of the companies themselves must be considered. A valuation, for example, of Canadian Northern properties by a Canadian Pacific engineer, committed to Canadian Pacific standards and grades by his own work, and in full sympathy with Canadian Pacific policies, would be absolutely unfair. The same can be said of engineers of either of the other roads, all of whom have a natural bias in favor of their own work, and an honest conviction at that. Much depends upon the point of view. The valuation of a given property may show startlingly different results arrived at by engineers whose experience and work, and resultant convictions and prejudices—never mind how honest they may be—have differed one from the other.

"The circular is of course in error where it says that an American engineer is appointed as the commission's advisor. He is not. His work is simply to look after the matter of physical valuation as nearly as may be, and that in itself is an all sufficient task. I feel somewhat keenly the position—not in the slightest degree personally, but in the interest of the public service. To my mind, the present occasion is a pretty good illustration of what is very largely relied upon by those opposed to public control and service of utilities—that is, that it is impossible that they would be conducted on business lines and as a matter of business. Personally, I have not found it so in the past. No such difficulties were raised, for example, when I acted as a commissioner of the Hydro Electric in Toronto, where the conduct of the business was left entirely in the hands of those responsible for it.

"This circular, however, requests each member to write:—1. To his representative in the Dominion Parliament, whether government or opposition, setting forth the facts of the case in a strong way, and pointing out that this is merely an incident in a long course of similar procedures. 2. To write in a similar vein to those having influence with the government in his own community or elsewhere. 3. That wherever similar incidents are brought to his attention he voice a protest, giving the facts to his local branch of the Canadian Society of Civil Engineers, or to the Secretary at Montreal, in such a manner that the council may deal therewith. 4. That he do not delay acting in this matter as above outlined, but proceed today to do what he can to bring every pressure to bear in every direction for the good of the engineering community in Canada.

"I, of course, do not know whether the action of the society was instigated by a disappointed applicant, whether it was initiated by the railways for their own purposes, or whether it was launched in the very best of faith. Personally, I believe it to be launched in the best of faith, but without any consideration of the immediate issue and the necessity of the present emergency. It would be difficult to imagine a more complete initiation of

an attempt to achieve a result by political influence. I do not know why railway accountants or any body of men engaged in railway work could not, with equal propriety, circularize complaints and insist upon the employment of some of their members on an inquiry, which after all, is only necessary in view of a railway situation, the result at least in part of the work of those engaged in construction of railways in Canada. The work is, of course, merely temporary. Only Canadians should in my view be appointed to permanent government positions, which I believe to be the rule in the States; but, so far as temporary work and advisory work is concerned, if proper results are to be obtained, the best man ought to be got irrespective of his parish, province, or country; and a great hurt will be done to public ownership and administration in Canada if campaigns such as that now undertaken are to flourish in the future."

"No Canadian Need Apply."

Under the above heading, the Toronto Globe said recently:—"There are two dangerous conditions symptomatic of national weakness which Canada should endeavor to avoid. Canadians should resist on the one hand every tendency towards smug complacency and self exaltation, and on the other hand the no less pernicious practice of self depreciation. Judging by recent happenings, Canada seems to have passed the first stage, and is now in serious danger of stultifying herself in the eyes of her neighbors by underestimating the worth of her own citizens. Has this country gone so far down in the scale of values as to pass by Canadians in favor of outsiders in public appointments in which expert knowledge and honor are the chief requirements? In criticizing the action of the Government in passing over Canadian civil engineers in favor of Prof. Swain, of Harvard, when selecting the personnel of the commission investigating the Canadian railway situation, the Globe has no intention of criticizing Prof. Swain, who stands so high in his profession. What compels criticism in this case is a government memorandum which adds insult to injury, so far as civil engineers in Canada are concerned. There is nothing in either the magnitude or seriousness of the question under investigation that justifies this undeserved slur cast upon the professional reputation and honor of an intelligent body of Canadian citizens. There are in the Dominion civil engineers second to none on this continent in professional standing, outside those connected with the various railway interests. Is it contended, then, that in all Canada no civil engineer can be found who will give an impartial and reliable report on the railways, free from the taint of political or railway influence? Is there not one righteous civil engineer in all Canada to whose honor this task could safely be entrusted? The question has only to be asked to show the absurdity of the government attitude in refusing to appoint a Canadian engineer instead of an imported expert. Toronto's experience does not bear out the Government's fears. W. T. Jennings, a former C.P.R. engineer, combatted railway aggression fearlessly when in the service of this city. Some more intelligible excuse will have to be found for this unjust slight upon the engineering profession of Canada."

The foregoing shows how impossible it is for the daily press to discuss any public matter without introducing politics. The Globe has fallen into two errors, first in saying that Prof. Swain

is a member of the commission appointed to enquire into railways and transportation, and second that he was appointed by the government. The commission, as frequently stated in these columns, is composed of A. H. Smith, President New York Central Rd., as Chairman, and Sir Henry Drayton, Chief Railway Commissioner. The third member appointed, Sir George Paish, of London, Eng., is not able to act, owing to ill health. Prof. Swain has not been appointed by the government, but by Messrs. Smith and Drayton. Their defence of the appointment is given in Sir Henry Drayton's letter to the Premier, reproduced above, and the government has taken the ground that it cannot interfere with the commission's appointments.

Comments by R. A. Ross, M.Can.Soc.C.E.

In a letter to a U.S. paper R. A. Ross, M.Can.Soc.C.E., Montreal, says in part:—

"As regards the case in point, it is one of a series of similar appointments made by the Dominion and Provincial Governments which have hitherto called forth merely desultory criticism by individual members of the Canadian Society of Civil Engineers. In this case (a particularly flagrant one in the opinion of all) it was decided that united action should be taken, not, be it noted, so much against American engineers as such, nor at all against Prof. Swain, but against the Government's total neglect of Canadian engineers. The action is intended as the opening gun of a campaign to force a recognition of the engineer on our lawyer politicians. In dealing with the matter we first met Prof. Swain at a small dinner in his honor at Montreal, and laid before him our intended programme, in which his case was a mere incident, pointing out that we had no criticisms to offer as to his attitude, as we would all be ready to act for the Government of the United States should that Government decide to call in Canadian engineers for advice—a thing, by the way, which has never happened and never can happen, owing to the legislation against such appointments.

"We entirely agree with the ethics of high thinking and plain living, and have held that position up till recently without complaint, although the plain living has become plainer, especially during the last three years; but at last we have awakened to the fact that the game is not played in that way, and that the admonition is not for practical use, but only for application to others—and we apparently are the others. The Canadian engineer is not surrounded by carefully constructed wire entanglements of defensive laws, and has had to fight in the open against all comers—and they have come in recent years in ever-increasing numbers. We are therefore in the position of a nation of avowed free traders who find that the other fellows are protectionists, and that in order to obtain, not the free trade which they desire and have always upheld, but merely a fair trade, they must take such action as will provide at least the less desirable alternative. How far we may ultimately find it advisable to go in the direction of much disliked protection we do not know, but the present situation is not as yet connected with a demand for legislation, being designed merely to discourage the calling in of outsiders where such necessity does not exist. As a matter of fact, the engineer in this as in other countries resents his position under the domination of the politician and proposes to make himself felt,

"The decision of the Society's council was unanimous, and as to the membership in general the only criticisms we have heard are from four U.S. members. This unanimous approval of Canadian members must indicate clearly that the matter is not a new question, but has been drilled in during past years by experience of governmental action, and indicates a well-grounded body of opinion endorsing the action of the council. The American engineer in question is a member of our society, and a valued one. A large number of Canadians are members of American societies and yet require a special act of Congress for each case to permit of their doing Government work. May it be pertinent to inquire what would be the attitude of the American societies toward any American Government which preferred Canadians, and passed over without consideration their own countrymen, or undertook to remove the legal restrictions imposed on alien engineers in the U.S.? The foregoing question does not appear pertinent to such confirmed free traders as ourselves, as should we later obtain such protection as exists for engineers in the U.S. we might be able to swap advantages and both return to that ethical plane which we may be forced reluctantly to abandon in the not distant future, as our campaign for the recognition of the engineer develops."

The Canadian Society of Civil Engineers' British Columbia Division, at a meeting held recently, decided to appoint a delegation to interview Sir George Foster, Minister of Trade and Commerce, and Hon. Martin Burrell, Minister of Agriculture, during their visit to that city and lodge a strong protest against "the policy of placing in the hands of aliens the engineering work of a commission appointed by the Canadian government to investigate Canadian railways." R. S. Hayward, President of the Vancouver branch, was in the chair, and a number of addresses were delivered strongly condemning the action of the government in awarding such an important post to one who was not a British subject when there were equally competent British engineers available to undertake the work. A strong case was outlined to be laid before the two ministers.

Freight and Passenger Traffic Notes.

The Grand Trunk Pacific Ry. has removed its divisional point from Wainwright to Edmonton, Alta.

The C.P.R., on Oct. 5, increased its first class saloon passenger rates from Vancouver to Hong Kong from \$225 to \$250.

C.P.R. lines centering on Lethbridge, Alta., are reported to have shipped this year 1,318,000 lbs. of wool, the produce of 84,000 sheep.

The C.P.R. put in operation an additional train on its Calgary-Edmonton line Oct. 29. It leaves Calgary at 13.20 o'clock, and the corresponding south-bound train leaves Edmonton at 17 o'clock.

The North Pacific Coast Passenger Agents' Association held its regular quarterly meeting at Victoria, B.C., Oct. 10. C. R. Jenney, General Agent, Passenger Department, G.T.P.Ry., Vancouver, being Chairman.

The C.P.R. has offered special rates on cattle returned from Winnipeg, Saskatoon, Moose Jaw, Calgary and Edmonton

to country points for feeding during the winter. The object is to enable farmers to utilize their surplus foodstuffs.

The Reid Newfoundland Co. is now operating its passenger steamship service between North Sydney, N.S., and Port Aux Basques, Nfld., in both directions, on Tuesdays, Thursdays and Saturdays, instead of daily as heretofore.

The Canadian Northern Ry., on Oct. 8, discontinued its train leaving Ottawa at 7.15 p.m. for Quebec. On the same day it put on a local train from Ottawa via Joliette and Montreal, leaving Ottawa at 8 a.m., and another train leaving Montreal at 3.45 p.m. daily except Sundays.

The Grand Trunk Pacific Ry. has extended its train service on the Moose Jaw Northwest Branch from Gilroy to Riverhurst, Sask. The service is a triweekly one, leaving Moose Jaw at 10.30 a.m., Mondays, Wednesdays and Fridays, and returning on Tuesdays, Thursdays and Saturdays.

The Grand Trunk Pacific Ry. announces that during December a through tourist car service will be operated between Moose Jaw, Sask., and Toronto. Through cars will leave Moose Jaw Mondays, Wednesdays and Saturdays, to connect with the "National" leaving Winnipeg Tuesdays, Thursdays and Saturdays at 5.15 p.m. The tourist car service on the Winnipeg-Edmonton section will be augmented for the December traffic.

The Grand Trunk Pacific Ry. put its winter time table in operation Oct. 15. The triweekly service each way between Edmonton and Prince Rupert has been discontinued, and a biweekly service substituted. Trains will leave Edmonton every Sunday and Tuesday at 10.35 p.m., arriving at Prince Rupert Tuesdays and Thursdays at 5.30, and leaving Prince Rupert Wednesdays and Saturdays at 11.30 a.m., arriving at Edmonton Fridays and Mondays at 8 a.m. In connection with this alteration the company will continue a weekly service by the s.s. Prince Rupert to Alaskan points until Dec. 21. The steamship will leave Vancouver on Thursdays at 10 p.m., and Prince Rupert on Saturdays at noon, arriving at Skagway on Mondays, and starting at noon on the same day on the return trip.

Grand Trunk Track Inspection.—The annual track inspection over the G.T.R. began on the Eastern Lines Oct. 9, the party consisting of the Chief Engineer, Engineer of Maintenance of Way, general superintendents, division engineers, superintendents of track, superintendents of bridges and buildings, division superintendents, assistant engineers, supervisors of track, supervisors of bridges and buildings and supervisors of signals. The same method of inspection was followed as during the previous two years by the officers of the Maintenance of Way Department, and by use of the inspection car equipped with an electric recording apparatus, which was fully described and illustrated in Canadian Railway and Marine World for April, 1915.

Brunner, Mond, Canada, Limited has been incorporated under the Dominion Companies Act, with authorized capital of \$3,000,000, office in Toronto, and power to manufacture nitrates and similar chemical products, and in connection therewith to carry on mining, to own steam and other vessels, to build railways and tramways, canals, docks and warehouses. It is reported that the company's works will be erected at Port Colborne or Welland, Ont.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Dallve-Madden Mine.—M. Albert, of Prince Rupert, B.C., is reported to have arrived in Vancouver in October to engage men to build an 18-mile mining railway from the Dallve-Madden Mine to the coast.

Dominion Atlantic Ry.—The Board of Railway Commissioners has approved of plans of new station and freight sheds at Middleton, N.S., details of which have already been published. (Oct. pg. 400.)

Dominion Government Railway to Hudson Bay.—A press report states that track has been laid to Kettle Rapids on the Nelson River, mileage 552, from Pas. Man., making 90.76 miles of track laid this season.

J. D. McArthur, the general contractor, has returned from an inspection of the work and is reported to have said that satisfactory progress had been made during the season, notwithstanding the scarcity of labor. There is no reason, he said, why the line should not be completed for traffic by the end of 1917. Oct. pg. 400.)

Edmonton, Danvegan and British Columbia Ry.—The station building at Peace River, Alta., has been completed. The general waiting room and ticket office is in the centre of the building, with the women's waiting room at one end, and a men's smoking room at the other.

Good progress is reported to have been made with grading on the 54-mile extension of the line from Spirit River to the B.C. Block. A Northwest Mounted Police officer is reported to have said in Vancouver, Oct. 10, that the grading gangs will reach the boundary line between Alberta and British Columbia by Dec. 31. (Oct. pg. 400.)

Quebec and Saguenay Ry.—Application is being made to the Quebec Legislature to incorporate a company with this title to build a tramway from Christopherson Lake on Bell River to Twenty-one Mile Bay on the Ottawa River, and from Lake Lamy to Rabbit Lake on the Ottawa River; to own and operate steam and other vessels in connection with these lines; to build telegraph and telephone lines, and to carry on a general lumbering, mining and trading business. The application is being made by G. Bryson, Jas. Bryson, Fort Coulonge, Que.; J. B. Fraser, W. H. A. Fraser, Ottawa; Geo. Gordon, North Bay, Ont.; A. B. Gordon, Toronto.

Grand Trunk Pacific Ry.—The extension of the Regina-Moose Jaw branch from Gilroy, Sask., mileage 108, to Riverhurst, about 1½ miles west of the Saskatchewan River, has been completed, and is reported to be opened for regular traffic. Grain traffic has been moved from Riverhurst since Sept. 1. (Oct. pg. 400.)

Grand Trunk Ry.—The Board of Railway Commissioners has authorized the company to use bridge 180 at mileage 122.90, district 3, Montreal subdivision, and has approved plans for a new station at Port Colborne, Ont. (Oct. pg. 400.)

Great Northern Ry. Lines in Canada.—The Vancouver, Victoria and Eastern Ry. and Navigation Co. has been authorized by the Board of Railway Commissioners to open for traffic the section of its line from a connection with the Kettle Valley line at Hope, B.C., to a connection with the Canadian Northern Pacific Ry.,

900 ft. The V. V. & E. R. runs over the K.V.R.'s Coquihalla Valley section to Hope, and then over the C.N.P.R. to a connection with another Great Northern Ry. line near the Fraser River bridge, opposite New Westminster. The opening of this piece of line gives the company a through route from Republic, Wash., to Vancouver.

The work being done in the vicinity of Coquitlam, B.C., to cut out an objectionable bend on the line into Vancouver is reported to be progressing favorably. In connection with this work the Board of Railway Commissioners has ordered the company to build a steel bridge on concrete abutments, capable of carrying a double-track line for the B. C. Electric Ry., across the line at the North Road, through which the new track is cut. The gravel and other material obtained in this area is being used for filling at False Creek. (Oct. pg. 400.)

Greater Winnipeg Water District Ry.—Tenders are under consideration for building of a locomotive shed at Waugh. Man., the Indian Bay terminal of the railway. The commissioners have under consideration a comprehensive plan for the promotion of colonization along the line.

Intercolonial Ry.—A new ballast pit has been opened at Milford, on the Halifax-Toronto section to provide ballast for

Tenders will be received to Nov. 15 for building the superstructure of the new grain elevator at St. John, N.B. The foundation work is reported to be in progress. (Oct. pg. 400.)

Niagara and Eastern Rd.—The New York Public Service Commission, on Oct. 14, refused the application of the Buffalo, Lockport and Rochester Rd. for permission to connect the Buffalo, Lockport and Rochester Rd. with the Niagara frontier, where it is proposed to build another international bridge across the gorge at the Devil's Hole. The com-

deal with the application at present. According to an Albany, N.Y., dispatch, the connecting line on the Canadian side would be a line to be built by the Canadian Northern Ry. A C.N.R. official has denied this, saying that that company was not interested in the application at Albany at all and that its repeal would make no difference to the C.N.R. plans for reaching the Niagara frontier.

Pacific Great Eastern Ry.—A press report states that plans have been prepared for the erection of a machine shop, storehouse and weigh scales at Squamish, and for the erection of a locomotive house, machine and repair shop at Lillooet, B.C., on which it is proposed to make an immediate expenditure of \$150,000. The work it is said will be started at once, and it is expected to have the several buildings completed by next spring.

Owing to the shortage of labor it is reported that but little progress is being made with grading and tracklaying between Clinton and Prince George. (Oct. pg. 400.)

Quebec Bridge. It is reported that rush orders have been placed in the U.S. for the necessary steel to complete a new suspension span to replace the one which fell into the river on Sept. 11 while it was being hoisted into position. It is

stated that the new span will be ready for placing during 1917. (Sept. pg. 364.)

Quebec, Montreal and Southern Ry.—A press report states that it is intended to replace immediately the locomotive house on Chambly Road, Longueuil, Que., destroyed by fire recently. (Jan., pg. 10.)

Quebec & Saguenay Ry.—Tenders were received by O'Brien & Doherty, contractors, to Oct. 6, for 30,000 railway ties for immediate delivery at Cap Tourmaline, Que. In connection with this we are officially advised that M. J. O'Brien of Renfrew, Ont., and Hugh Doherty of Montreal, working as O'Brien & Doherty,

over by the Dominion Government when operated as part of the Canadian Gov-

trolled by the G.T.R.

Pere Marquette Rd. Officials have completed their annual inspection of the entire system in the U. S. and Canada, upon which the award of prizes is made. The prizes consist of \$100 to the roadmaster of the division receiving the highest marks; \$25 to the foreman of the best section on each roadmaster's division; \$50 to the signal supervisor receiving the highest grade; \$100 to the master mechanic having the most efficient shops; \$25 to the agent on each division receiving the highest grade for care of buildings.

Changes in C.P.R. Signalling.—On the section of about 5 miles of double track between Place Viger and Mile End stations, Montreal, automatic signals, using direct current for track circuit, were installed about 4 years ago. This year, the track circuits have been changed from direct to alternating current, the signals and switch indicators operating by direct current as formerly. The change in the track circuit current has been made to avoid the chance of interference from stray foreign current.

Mainly About Railway People Throughout Canada.

Lord Shaughnessy sailed from New York, Oct. 25, for England.

S. J. McLean, one of the members of the Board of Railway Commissioners, has been called to the Ontario bar and sworn in as a solicitor.

Jno. McIntyre, K.C., of Kingston, Ont., who died Oct. 4, aged 73, was a brother of D. M. McIntyre, K.C., Chairman, Ontario Railway and Municipal Board, Toronto.

W. H. Grant, General Tie & Timber Agent, and acting General Store Keeper Eastern Lines, Canadian Northern Ry., has been elected President of the Toronto Curling Club.

J. T. Arundel, General Superintendent, Ontario District, C.P.R., who has been suffering from rheumatism, has been taking treatment at Mount Clemens, Michigan.

H. E. Beasley, General Superintendent, Esquimaux & Nanaimo Ry., Victoria, B.C., and Mrs. Beasley, spent a few weeks in Toronto and vicinity recently, visiting relatives.

Lt. Col. Blair Ripley, Commanding Officer, No. 1 Construction Battalion, and formerly Engineer of Grade Separation, C.P.R., North Toronto, has arrived in England with his battalion.

Hon. F. Cochrane, Minister of Railways and Canals, was presented with an oil portrait of himself, by a number of friends in Cobalt, Haileybury and Liskeard, Ont., at Haileybury, Oct. 5.

S. Parker Tuck, who died at Nelson, B.C., recently, was associated with the building of a section of the C.P.R. from Yale westward, and was in charge of the work from Lytton to Spence's Bridge.

A. S. Dawson, M.Can.Soc.C.E., Chief Engineer, and R. S. Stockton, Superintendent of Irrigation, Natural Resources Department, C.P.R., Calgary, Alta., were at the irrigation convention at El Paso, Texas, in October.

D. McNicoll, formerly Vice President, and a director, C.P.R., who, owing to illness, spent the summer at his son's ranch Penticton, B.C., has returned to Montreal where, it is said, he is to undergo special medical treatment.

A. J. Stevens, M.Can.Soc.C.E., who was in charge of the Dominion Public Works, Manitoba District, has been transferred to Windsor, Ont., to relieve H. J. Lamb, M.Can.Soc.C.E., who is in the Canadian Expeditionary Force.

Hon. John Costigan, who died at Quebec, Que., Sept. 29, aged 82, was at one time associated with the promotion of the Quebec and New Brunswick Ry. Co., which, however, carried out no railway construction, and was, for some years, until 1897, Minister of Marine.

The Ross Memorial addition to the Royal Victoria Hospital, Montreal, was officially opened by the Duke of Connaught, Oct. 11. The building has been erected and equipped by J. K. L. Ross, director, C.P.R., in memory of his father, the late James Ross, and of his mother.

A. E. Killam, formerly Inspector of Bridges and Buildings, Intercolonial Ry., Moncton, N.B., attended the annual convention of the American Railway Bridge and Building Association, of which he was Vice President, 1911-12, and President, 1912-13, at New Orleans, La., Oct. 17 to 19.

H. E. Stevens, M.Can.Soc.C.E., Bridge Engineer, Northern Pacific Ry., has been promoted to be Chief Engineer, succeeding W. E. Darling, resigned. Mr. Darling has opened an office in St. Paul, Minn., as consulting engineer, specializing in railway engineering and construction.

Sir Thomas Tait, President, Fredericton & Grand Lake Coal & Ry. Co., who resigned his position as Director of National Service recently, stayed with his mother-in-law, Mrs. G. R. R. Cockburn, in Toronto, during part of October, being accompanied by Lady and Miss Tait.

D. R. Campbell, Assistant General Manager, Pacific Division, Canadian Northern Ry., was reported to be convalescent, about the middle of October, after a sudden illness which necessitated several weeks stay in the hospital at Kamloops, B.C. He is now at his home in Vancouver.

Lt. Col. John Stewart, of Halifax, N.S., of the Canadian Army Medical Corps, who was offered the position of head of the Duchess of Connaught's Canadian hospital at Cliveden, Eng., recently, is a brother of A. F. Stewart, M.Can.Soc.C.E., Chief Engineer, Eastern Lines, Canadian Northern Ry.

Col. H. C. Mitchell, B.A.Sc., C.E., M.Can.Soc.C.E., one of the Corps of Guides, who has been at the front almost since the commencement of war, and who was previously in engineering practice in Toronto, has been transferred from the Canadian staff to the Second British Army's General Staff and has been appointed General Staff Officer. He was awarded the D.S.O. some time since.

Denis Murphy, President, Ottawa Transportation Co., and one of the Timiskiming & Northern Ontario Ry. Commissioners, who is 77 years of age, has been seriously ill at his house in Ottawa for several weeks. His son, Lt. Col. G. P. Murphy, who has been in England a good deal since war broke out, and who was appointed Quarter Master General at London recently, has returned to Canada to be with him.

Sir William Mackenzie, President, and D. B. Hanna, Third Vice President, Canadian Northern Ry., who left Toronto in August for England with several members of their families, returned to Toronto Oct. 7, having come over on the s.s. Olympic, which made a record trip to Halifax in 4 days, 15 hours. Mr. Hanna, in company with Sir Clifford Sifton, spent some days visiting the front in Belgium and France.

Neil Mooney, whose appointment as Assistant General Passenger Agent, New York Central Rd., New York, was announced in our last issue, was entertained to luncheon at Montreal, Oct. 12, by a number of transportation men in the city, and presented with a silver tea service. Prior to his present appointment, he had been General Agent, Passenger Department, N.Y.C.R. at Montreal, since Jan. 1910.

W. J. Cunningham, who has been appointed to the James J. Hill Professorship of Transportation of Harvard University, was born at St. John, N.B., April 29, 1875, and began railway work with the C.P.R. as stenographer and ticket clerk at St. John and Boston. In 1896 he entered Boston and Albany Rd. service, and has since been in the service of the New York, New Haven and Hartford,

and Delaware, Lackawanna and Western, in various capacities, and latterly was President's Assistant, Boston and Maine Rd.

A. K. Galloway, who was appointed General Master Mechanic, Northwest District, Baltimore and Ohio Rd., and Cincinnati, Hamilton and Dayton Rd., recently was born at St. Thomas, Ont., Oct. 1, 1885, and entered Michigan Central Rd. service there as an apprentice in 1902, and on completion of his apprenticeship remained there until Nov. 1, 1914, at which time he was roundhouse foreman, and was later appointed General Foreman. He subsequently transferred to Baltimore and Ohio Rd. service as Master Mechanic at Baltimore, and remained as such until his present appointment.

Royden Findlay McNaughton, whose appointment as City Ticket Agent, Canadian Northern Ry., Regina, Sask., was announced in our last issue, was born at Petrolia, Ont., June 23, 1889, and entered railway service in April 1908, since when he has been, to Oct. 1910, relieving agent, Middle Division, G.T.R., Toronto; Oct. 1910 to Nov. 1912, rate clerk, Passenger Department, Canadian Northern Ry., Winnipeg; Nov. 1912 to April 1913, chief clerk to District Passenger Agent, C.N.R., Saskatoon, Sask.; April 1913 to May 1914, Travelling Passenger Agent, C.N.R., Saskatoon, Sask.; May 1914 to Sept. 1916, Travelling Passenger Agent, C.N.R., Edmonton, Alta.

V. G. Bogue, who died suddenly, Oct. 14, on board ship when returning to New York from Mexico, had been concerned with the construction of many railways on this continent. At one time he made a report for the C.P.R. on the economics of its line between Calgary, Alta., and Vancouver, B.C., as compared with a proposed revised line, and other routes. Amongst other work carried out in Canada, he examined the report and plans for the improvement of the harbor, waterfront and railway terminals at Prince Rupert, B.C. He was a member of the American Society of Civil Engineers, and of the American Railway Engineering Association.

James Balkwill, whose appointment as Division Superintendent, Michigan Central Rd., St. Thomas, Ont., was announced in our last issue, was born in Southwold Tp., Ont., Mar. 8, 1870, and entered M.C.R. service in Mar. 1888, since when he has been to June 1889, telegrapher at various places; June 1889 to Aug. 1890, relieving agent, various places; Aug. 1890 to Dec. 1903, agent, Dutton, Ont.; Dec. 1903 to Mar. 1904, extra dispatcher, St. Thomas, Ont.; Mar. 1904 to June 1913, chief clerk to Superintendent, St. Thomas, Ont.; June 1913 to Nov. 1914, Assistant Trainmaster, St. Thomas, Ont.; Nov. 1914 to Sept. 1916, Trainmaster, St. Thomas, Ont.

J. A. Everell, whose appointment as District Passenger Agent, Canadian Government Railways, Montreal, in addition to his position as Superintendent, Montmorency Division, Quebec Ry. Light and Power Co., Quebec, Que., was announced in our last issue, was born at Cap Rouge in 1863. He commenced his transportation service as a clerk and telegraph operator with the Cap Rouge Pier and Wharf Co., and in 1889 joined the Quebec and Lake St. John Ry. staff, and was station master at Riviere a Pierre and

later at Chambord, Que. In Aug. 1889, he entered Quebec, Montmorency and Charlevoix Ry. service as dispatcher, and remained when that line became the Montmorency Division of the Quebec Ry. Light and Power Co., eventually becoming Superintendent of that division.

Alfred Erwin McMaster, who has been appointed Division Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., was born at Perth, Ont., Oct. 22, 1885, and entered railway service in 1902, since when he has been, to May 1903, in Freight Department, C.P.R., Keewatin, Ont.; May 1903 to Aug. 1907, in various positions up to assistant agent, C.P.R., Port Arthur, Ont.; Aug. 1907 to Aug. 1908, agent, and chief clerk to Superintendent, Grand Trunk Pacific Ry., Fort William, Ont.; Aug. 1908 to July 15, 1913, agent, and General Agent, G.T.P.R., G.T.R. System, and Grand Trunk Pacific Coast Steamship Co., Prince Rupert, B.C. July 15, 1913 to Sept. 30, 1916, Commercial Agent, G.T.P.R., Regina, Sask. Prior to leaving Regina, he was entertained to dinner at the Canada Club, and presented with a case of pipes.

W. H. Sample, who has been appointed Master Mechanic, Eastern Lines, G.T.R., Montreal, was born at Altona, N.Y., Aug. 20, 1864, and entered railway service, July 20, 1882, since when he has been, to April 1886, fireman, Central Vermont Ry.; April 1886 to July 1887, locomotive man, C.V.R.; July 1887 to Aug. 1889, locomotive man, Atchison, Topeka and Santa Fe Ry.; Aug. 1889 to Feb. 1901, locomotive man, Central Vermont Ry.; Feb. 1901 to July 1906, Road Foreman of Locomotives, C.V.R.; July 1906 to Mar. 15, 1911, Superintendent of Motive Power and Car Department, Northern Ry. of Costa Rica; March 15, 1911 to Oct. 1914, Master Mechanic, Ottawa Division, Eastern Lines, G.T.R., Ottawa, Ont.; Oct. 1914 to Oct. 1916, Master Mechanic, Western Lines, G.T.R., Battle Creek, Mich.

M. G. Murphy, whose appointment as General Agent, Passenger Department, C.P.R., Detroit, Mich., was announced in our last issue, was born at Halifax, N.S., Feb. 26, 1878, and entered C.P.R. service, Mar. 31, 1899, since when he has been, to Jan. 1901, agent and operator, Atlantic Division; Jan. 1901 to 1903, chief clerk to Freight Agent, C.P.R., and agent, Dominion Express Co., Halifax, N.S.; 1903 to 1905, Travelling Passenger Agent, Atlantic Division; 1905 to June 1907, Assistant to District Passenger Agent, St. John, N.B.; June 1907 to Nov. 1, 1910, General Travelling Passenger Agent, All Lines, Montreal; Oct. 1, 1911 to Jan. 31, 1916, District Passenger Agent, Toronto covering rail and lake lines as well as ocean services; Jan. 31 to Sept. 1916, District Passenger Agent, C.P.R., and Canadian Pacific Ocean Services Ltd., St. John, N.B.

Herbert Gates Reid, who has been appointed Assistant Superintendent of Rolling Stock, Canadian Government Railways, Transcona, Man., was born at Pembroke, Ont., Oct. 27, 1863, and entered railway service in Mar., 1884, since when he has been, to Nov. 1884, wiper, C.P.R., North Bay, Ont.; Nov. 1884 to Nov. 1887, fireman, C.P.R., North Bay, Ont.; Nov. 1887 to Dec. 1905, locomotive man, C.P.R., North Bay, Ont.; Dec. 1905 to June 1906, relieving Road Foreman of Locomotives, C.P.R., North Bay, Ont.; June 1906 to Feb. 1907, locomotive man, C.P.R., North Bay, Ont.; Feb. to April 1907, Locomotive Foreman, C.P.R., Chapleau, Ont.; Sept. 1907 to Oct. 1908, District Master Mechanic, District 1, Lake Superior Division, C.P.R., North Bay, Ont.; Oct. 1908 to April 1915, Master Mechanic, Lake Superior Division, C.P.R., North Bay, Ont.; April 1915 to May 1916, Master Mechanic, Saskatchewan Division, C.P.R., Moose Jaw; May to Sept. 30, 1916, Master Mechanic, District 3, National Transcontinental Ry., Transcona, Man.

N. S. Dunlop, Insurance and Tax Commissioner, C.P.R., Montreal, has, on medical advice, resigned in order to take a prolonged rest. He was born near Almonte, Ont., Jan. 17, 1861. For seven years he was a public school teacher, and in 1886 entered a law office in Toronto, and was, subsequently, Secretary and then President of the Canadian Shorthand Society. In 1888 he entered the C.P.R. solicitors' office at Toronto, and in 1890 was placed in charge of the company's assessments and taxation in Ontario, and also had charge of garnishee matters, inquests, investigations, etc., and did the court shorthand work for the company. He was appointed Insurance and Tax Commissioner in 1892, and in 1904 was also appointed Claims Adjuster, Atlantic, Eastern and Lake Superior Divisions, which joint positions he held until 1914, when, owing to the growth of the C.P.R., his duties were confined to those of Insurance and Tax Commissioner. He was the creator of the company's floral department, which is responsible for the floral decoration of the company's stations throughout the Dominion.

Normand R. DesBrisay, whose appointment as District Passenger Agent, C.P.R. St. John, N.B., was announced in our last issue, was born at Minneapolis, Minn., May 18, 1888, and entered C.P.R. service, June 14, 1904, since when he has been, to May 31, 1905, clerk in District Passenger Agent's office, St. John, N.B.; June 1, 1905 to June 7, 1907, ticket clerk, City Ticket Office, St. John, N.B.; June 14, 1907 to Dec. 5, 1908, ticket clerk, s.s. Empress of Ireland; Dec. 5, 1908 to May 24, 1909, exchange ticket clerk, Halifax, N.S.; May 27 to Nov. 19, 1909, exchange ticket clerk, Quebec; Nov. 19, 1909, to May 4, 1910, exchange ticket clerk, Halifax, N.S.; May 5 to July 15, 1910, exchange agent, Quebec; July 15, 1910 to Nov. 1912, Travelling Passenger Agent, St. John, N.B.; he resigned that position to enter private business for a short time, and resumed his duties in the early part of 1913, and continued as Travelling Passenger Agent, St. John, N.B., until July 1914; July 1914 to Sept. 1916, General Travelling Passenger Agent, Montreal; and latterly, Chief Clerk, Passenger Department, New York.

William John Pickrell, whose appointment as Assistant Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que., was announced in our last issue, was born at London, Ont., Sept. 15, 1880, and entered C.P.R. service, Jan. 3, 1900, since when he has been, to July 31, 1901, wiper and fitter's helper, Toronto; July 31, 1901 to Nov. 1, 1904, Locomotive Foreman, Toronto; Nov. 1, 1904 to Aug. 4, 1906, travelling fireman, Ontario Division; Aug. 4 to Oct. 1, 1906, locomotive man, Toronto; Oct. 1, 1906 to Aug. 1, 1907, travelling fireman, Ontario Division; Aug. 1, 1907 to April 15, 1908, Assistant Road Foreman of Locomotives, Ontario Division; April 15, 1908 to May 10, 1910, locomotive man, Toronto; May 10 to July 1, 1910, rule examiner, Ontario Division; July 1 to Oct. 15, 1910, locomotive man, Toronto; Oct. 15 to Dec. 10, 1910, rule examiner, Ontario Division; Dec. 10, 1910 to April 9, 1912, locomotive

man, Toronto; April 9 to Nov. 1, 1912 Assistant District Master Mechanic, District 1, Ontario Division, Toronto; Nov. 1, 1912, to July 29, 1913, District Master Mechanic, District 3, Ontario Division; July 29 to Oct. 18, 1913, Assistant Superintendent, District 3, Ontario Division; Oct. 18, 1913, to April 24, 1915, Assistant Superintendent, District 2, Atlantic Division, Aroostook Jct., N.B.; April 24, 1915, to Sept. 1, 1916, Master Mechanic, Ontario Division, Toronto.

George R. Martin, who has been appointed Vice President, Great Northern Ry., St. Paul, Minn., was born at Evans Mills, N.Y., July 3, 1864, and entered railway service in 1885, since when he has been, consecutively, to Jan. 1, 1887, telegraph operator and agent, Chicago and North Western Ry.; Jan. 1, 1887 to July 1890, station agent, dispatcher and chief clerk to Superintendent, Minneapolis, St. Paul and Sault Ste. Marie Ry.; July 1, 1890 to Aug. 1, 1894, in accounting department, Great Northern Ry., and from Aug. 1, 1894 to Jan. 1, 1897, Assistant Auditor of Disbursements, same road; Jan. 1 to Mar. 1, 1897, Special Superintendent, same road; Mar. 1, 1897 to Mar. 1, 1898, General Superintendent, Montana Central Ry.; Mar. 1, 1898 to Mar. 1, 1899, General Superintendent, Central District, Great Northern Ry.; Mar. 1, 1899 to Nov. 1, 1902, Auditor of Disbursements, same road; Nov. 1, 1902 to Jan. 1, 1905, General Auditor, same road; Jan. 1 to May 15, 1905, on special duty in President's office, same road; May 15, 1905 to Jan. 1, 1906, Assistant to Comptroller, same road; Jan. 1, 1906 to June 1, 1911, Assistant to Comptroller, same road; Jan. 1, 1911 to Sept. 1, 1916, Comptroller. He is also Vice President, Great Northern Steamship Co., Northern Steamship Co., Chairman of Pension Board, G.N.R., Vice Chairman G.N.R. Employees Investment Co., Comptroller, Great Northern Express Co., and of all the minor railway and other subsidiary companies of the G.N.R.

Grain Inspection at Western Points.

The following figures compiled by the Department of Trade and Commerce, show the number of cars of grain inspected on railways at Winnipeg and other points on the Western Division for September, and for 12 months ended Sept. 30, with a comparison of the number of cars inspected for 12 months ended Sept. 30, 1915.

	Sept.	12 months to Sept. 30, 1916	12 months to Sept. 30, 1915
C.P.R. Calgary.	269	7,505	6,899
C.N.R.	5,838	114,700	48,761
G.N.R. Duluth	219	15,451	1,866
G.T.P.R.	1,007	41,602	16,560
Totals	16,333	380,571	150,590

W. A. Griffiths, formerly Secretary to Manager, Department of Natural Resources, C.P.R., Calgary, Alta., and now Traffic Assistant, Gold Coast Government Railways, Secondee, West Africa, writes: "Permit me to say how much I appreciate reading Canadian Railway and Marine World month by month. Its pages are perused by other Government officers

G.T.R. Importing Machinists.—Stratford, Ont., press dispatch, Oct. 14. Scarcity of machinists at the G.T.R. shops, owing to enlistments, etc., has necessitated the importing of 25 from the United States. Woman labor is assisting, but is not by any means solving the labor problem in the shops.

Traffic Orders by the Board of Railway Commissioners.

Interchange at Moose Jaw, Sask.

25400. Sept. 11. Re the application of City of Moose Jaw for an order directing interchange facilities between the C.P.R. and Grand Trunk Pacific Ry. at Moose Jaw. Upon the consent of the Board of Grain Commissioners, the Grand Trunk Pacific and Canadian Pacific Railway Companies, and the report and recommendation of the Chief Engineer of the Board, it is ordered that the plan filed by the C.P.R., dated Moose Jaw, Aug. 12, 1916, as revised Aug. 21, 1916, showing in red the transfer tracks at the government elevator, Moose Jaw, providing for the interchange of traffic between the C.P.R. and the G.T.P.R. be approved.

25485. Sept. 30. Re application of the City of Moose Jaw, Sask., for an order requiring interchange facilities between Canadian Pacific and Grand Trunk Pacific Railways in Moose Jaw, and orders 24797, Mar. 16, 1916, and 25400, Sept. 11, 1916, made herein. Upon the consent of the Board of Grain Commissioners, the Grand Trunk Pacific and Canadian Pacific Railway Companies, and the City of Moose Jaw, and upon the report and recommendation of the Chief Engineer of the Board, it is ordered that the C.P.R. be required to construct an interchange track between its railway and the G.T.P. Ry. at Moose Jaw, and be authorized to construct, maintain and operate the said interchange track across the road allowance between Secs. 25 and 26, Tp. 16, R. 27, W. 2nd M., as shown on the plans dated Aug. 12, 1916, revised to Aug. 30, 1916, and dated Moose Jaw, Sept. 1, 1916. That the G.T.P.R. contribute \$2,500 toward the cost of constructing the interchange track, the remainder to be paid by the C.P.R.; and that the cost of maintenance be reserved for further consideration. That orders 24797 and 25400 be rescinded.

Transfer Track at Yorkton.

25424. Sept. 16. Re application of the Board of Trade of Yorkton for a transfer accommodation at Yorkton, between the Canadian Northern Ry. and the Grand Trunk Pacific Branch Lines Company. It is ordered that the Canadian Northern Ry. be directed to construct a transfer track at Yorkton between its railway and the Grand Trunk Pacific Branch Lines Co.'s railway, as shown on the plan dated Winnipeg, Aug. 29, 1916, and filed with the board. That the Canadian Northern pay four-fifths and the Grand Trunk Pacific Branch Lines Co. one-fifth of the cost of construction of the transfer track, the said companies to furnish without charge the necessary land on their respective rights of way for the transfer track. That the cost and maintenance of the transfer track be borne equally by the said railway companies. That the construction of the transfer track be completed.

Toronto, Hamilton & Buffalo Ry. Tariff.

25457. Sept. 22. Re application of Toronto, Hamilton & Buffalo Ry., under sec. 327 of the Railway Act, for the approval of its Standard Mileage Freight Tariff, C.R.C. no. 1113, cancelling C.R.C. no. 1, it is ordered that the said tariff be approved.

Coal Rates from Niagara Frontier to St. Catharines and Thorold.

25464. Sept. 25.—Re complaint of City of St. Catharines, Town of Thorold, McKinnon-Dash Co., Devaney & Son, D.

Dittrick, and W. H. McCormick, of St. Catharines; H. N. Boyle, of Merriton; Welland Vale Manufacturing Co., St. Catharines; Canadian Retail Coal Association of Brantford, and McMahon Bros. of Thorold, complaining against increase in rates on coal in carloads from Niagara Frontier to Thorold and St. Catharines for Niagara, St. Catharines & Toronto Ry. delivery. It is ordered that the railway companies interested establish with as little delay as possible, a joint rate of 47c a ton to apply on coal in carloads from the Niagara Frontier to Thorold and St. Catharines for Niagara, St. Catharines & Toronto Ry. delivery, to be apportioned between the two companies as follows—27c a ton to Michigan Central Rd. and 20c a ton to Niagara, St. Catharines & Toronto Ry.

The Assistant Chief Commissioner, D'Arcy Scott, gave the following judgment:—The Michigan Central Rd. and the Niagara, St. Catharines & Toronto Ry. have for many years had a joint rate in effect on coal from the Niagara Frontier to St. Catharines and other Niagara, St. Catharines and Toronto points of 40c a ton. Of this the Michigan Central received two-thirds and the Niagara, St. Catharines & Toronto one-third. This rate was cancelled on May 5 last, because the companies were unable to agree on the proportion each company should receive of the revenue. The Niagara, St. Catharines & Toronto contended that the extension of its line to Welland, which made Welland the interchange point, instead of Niagara Falls as formerly, materially reduced the Michigan Central's haul; and that therefore an equal division of the rate giving each company 20c should be made. The Niagara, St. Catharines & Toronto also contended that the payment of car rental for foreign cars on a per diem charge, instead of on a mileage basis, which was the method in use at the time the joint rate was established necessitated its securing an increased revenue or the traffic would be handled at a loss. This means that instead of paying 20c a car for mileage the car rental now amounts to \$2.70 a car; i.e., the per diem allowance of 45c for 6 days. This time is made up by counting 1 day in, 1 day passing customs, 3 days unloading allowed by the Car Service Rules, and 1 day out. The Michigan Central submitted that it was satisfied with the 40c rate so long as its proportion was two-thirds.

At the time the Niagara Central (now the Niagara, St. Catharines & Toronto) was built it received substantial financial aid from St. Catharines, and the company agreed that the rate on coal should not exceed 40c from the boundary for 20 years. The agreement was lived up to by the company, but the time limit expired some years ago. Coal merchants at St. Catharines and Thorold have spent money in the erection of coal sheds on the line of the Niagara, St. Catharines & Toronto with the expectation that the joint rate would be continued. The Grand Trunk had a 40c rate to these points which was unchanged; but, if these coal merchants desired to get their coal shipped in on the Grand Trunk they either had to pay cartage or interswitching to get it to their sheds.

After the cancellation of the 40c joint rate the Michigan Central put in a rate of 40c to Welland, and the Niagara, St. Catharines & Toronto put in a rate of 20c

from Welland to St. Catharines and Thorold, making the sum of the locals 60c in place of the 40c joint rate which had been cancelled.

Since the establishment of the 40c one line haul rate from the frontier to St. Catharines put in by the Grand Trunk, the Board in its judgment in the Eastern Rates Case has allowed a 10% increase. This rate is, therefore, now increased to 44c a ton.

A joint rate on coal from the frontier to St. Catharines and adjacent points over the Michigan Central and Niagara, St. Catharines & Toronto should be established; but it is not reasonable to expect that it should be as low as a one line rate. I think the Niagara, St. Catharines & Toronto has made out a good case for an increase. The Michigan Central said it was satisfied with its two-thirds of 40c which was (26.66c) 27c, and the Niagara, St. Catharines & Toronto stated it wanted 20c. Adding these together it would make a joint rate of 47c, which would be only 3c over the one line rate and would, I think, be reasonable.

An order should go for the establishment, as soon as possible, of a joint rate of 47c with the proportions to each company as stated. As far as this Board is concerned we will accept the new tariff effective on short notice, but the Interstate Commerce Commission requires 30 days notice of the new tariff to be given that commission and the public. Perhaps this time would be shortened if the Michigan Central applied for it.

Delivery of Milk and Cream at Parkdale.

25472. Sept. 27. Re application of G. R. Harris & Son, of Toronto, for an order requiring the C.P.R. to deliver shipments of milk and cream as before at Parkdale station and not West Toronto, which latter station is inconvenient to the applicant. Upon hearing the application at Toronto, July 10, in the presence of counsel for the applicants and the railway company, one of the applicants appearing in person, and upon the report of the Chief Operating Officer of the Board, it is ordered that the application be dismissed.

Omission of Symbols From Class Freight Rate Tariffs.

25555. Oct. 24.—Re tariffs of class freight rates authorized by general order 167, July 3, 1916, in what is known as the Eastern Rates Case, and the application of the C.P.R. for relief from the provisions of order no. 16900, June 27, prescribing certain symbols to denote rate changes. Upon its appearing that, owing to necessary changes in the groupings of the stations, it will be impracticable to carry out intelligibly the provisions of order 16900 with respect to the class freight tariffs from points west of Montreal to points east thereof, it is ordered that the said relief be granted, provided that a notice be printed at the beginning of the said tariff, or tariffs, reading as follows:—“This tariff contains the changes in rates authorized by the general order of the Board of Railway Commissioners for Canada, no. 167, dated July 3, 1916, which order has necessitated a rearrangement of the station groupings which makes it impracticable to indicate the individual changes by symbols as prescribed by the order 16900, dated June 27, 1912, the omission of the said symbols in this tariff having been authorized by order 25555, dated Oct. 24, 1915.”

Joint Rates, From Minnesota Transfer to Saskatoon.

Commissioner McLean gave the following judgment Sept. 28:—Various shipments were made at various dates in 1912 and 1913 from points east and south of Minnesota Transfer to Saskatoon, Sask. A claim for refund on account of alleged overcharges was made against the Canadian Northern Ry. by the Security Traffic Bureau of Minneapolis, acting for McKenzie & Thayer, of Saskatoon. Considerable correspondence has taken place between the applicant and the railway company. The matter has been submitted to the board for its opinion. From the points of origin in the U. S. there were no specific through rates to Saskatoon. The applicants built up a combination rate of 11c to Minnesota Transfer, plus 12c from Minnesota Transfer to International Boundary, plus 14c from International Boundary beyond, a total of 37 as against the rate of 38 charged. The rate of 14c from the International Boundary beyond is carried in C.N.R. Tariff C.R.C. 526, which, however, bears a notation "Rates shown herein may be used only when no other rates apply. They may not be used either by themselves or in combination in preference to any specific tariff rate."

The applicants contend that this clause does not apply in the present instance, as there are no specific through tariff rates from points of origin to destination, and that there is no other rate applying from the International Boundary to Saskatoon than that applying in the tariff above quoted, viz., 14c. The Canadian Northern in its correspondence points out that the rate of 27c charged from the Minnesota Transfer is a specific through rate. Minnesota Transfer is a recognized junction point, and it is also a basing point for rate making. A through rate was in fact in existence therefrom.

The Interstate Commerce Commission has ruled that where a through rate is constructed on a combination, each factor must be published and filed with the commission—Aubrey & Semple, v. G. H. & S. A. Ry. Co., 17 I. C. C., 271.

Under sec. 336 of the Railway Act, where traffic is carried from any point in a foreign country into Canada . . . by any continuous route, owned or operated by any two or more companies whether Canadian or foreign, a joint tariff for such continuous route shall be duly filed with the board. There is no plea that the route was discontinuous or that there was in fact a series of purely local movements. A joint tariff must, therefore, be filed and the filing covering the movement from Minnesota Transfer is a compliance with the Railway Act.

No information is submitted to show how the 27c rate is divided between the railway south of the International Boundary and the Canadian Northern. The jurisdiction of the board is in respect of the movement in Canada; there is no application to hold the 27c rate unreasonable because in excess of the locals and for corresponding reduction of the rate for the future. Without passing on the question of the jurisdiction of the board to regulate a through rate from Minnesota Transfer, a point in the U. S., to a point in Canada, it may be said that in general where a through rate is attacked as being unreasonable because in excess of the sum of the locals, the board's jurisdiction goes only as far as directing a reduction for the future. The board possesses no power to direct a refund. It

cannot, therefore, direct a refund of the difference, if any, between the division received by the Canadian Northern out of the 27c rate and the 14c local. The applicants' papers may be returned.

Railway Rolling Stock Notes.

The C.P.R. received 200 freight refrigerator cars from its Angus shops, Montreal, recently.

The Greater Winnipeg Water District which was in the market recently for a mogul locomotive, has purchased one from the City of Winnipeg.

The Eastern Car Co. expected to make the first shipment of 350 of the 2,000 box cars which it is building for the Paris & Orleans Ry., France, by the end of October.

The Timiskaming & Northern Ontario Ry. has received 2 Mikado locomotives, being part of an order for six, from the Canadian Locomotive Co. Details of these locomotives were given in a previous issue.

The C.P.R. has ordered 7 steel baggage cars, 70 ft. long; 74 steel underframe box cars, 40 tons capacity, and 22 steel underframe freight refrigerator cars, 41 ft. long, 30 tons capacity, from its Angus

shops. Between Sept. 18 and Oct. 18, received the following additions to rolling stock:—2 sleeping cars from National Steel Car Co., and 3 Pacific type locomotives from Montreal Locomotive Works.

Trucks C.P.R. standard 30 ton, diamond arch bar
Wheels M.C.B. standard 33 ins.
Brake shoes Dominion Brake Shoe Co.'s steel back

Following are chief details of 100 refrigerator cars, 40 tons capacity, with steel draft arms, which Canadian Car and Foundry Co. is building for Canadian Government Railways, as mentioned in our last issue:

Length 8 ft. 11 in.
Width over side sills 26 ft. 10 1/2 in.
Height, top of floor to underside of ceiling 28 ft. 9 1/2 ins.
Length inside between ice boxes 26 ft. 9 1/2 ins.
Width 7 ft. 6 3/4 ins.
Height top of floor to underside of ceiling 28 ft. 9 1/2 ins.
Outside of end sill to centre of body bolster 5 ft. 2 in.
Height, top of rail to centre of coupler 2 ft. 10 1/2 in.
Wheel base of truck 5 ft. 2 ins.
Centre to centre of trucks 26 ft. 9 1/2 ins.
Draft gear Tandem spring type
Couplers Improved M.C.B. automatic vertical plane type
Brake beam Westinghouse K.C. 1012
Trucks 40 ton standard, diamond arch bar
Wheels M.C.B. standard 33 ins.
Brake shoes Dominion Brake Shoe Co.'s steel back
Journal boxes McCord, M.C.B. 4 1/4 by 8 ins.
Journal bearing 5 lb. 9 in.
Ice tank 200 gal. capacity

Canadian Northern Railway Earnings, Etc.

July 1, 1916:

	\$7,519,100	\$5,249,700	\$2,269,400	\$1,325,300
Incr	\$3,573,800	\$2,248,500	\$1,325,300	...

Approximate earnings for Sept., \$3,187,900, and for three weeks ended Oct. 21, \$2,544,800, against \$2,757,000 for Sept., and \$2,407,110 for three weeks ended Oct. 21, 1915.

Canadian Pacific Railway Earnings, Etc.

1915-16, from July 1, 1915:

Grand Trunk Railway Earnings.

Approximate earnings for three weeks ended Oct. 21, \$2,810,229, against \$2,757,000 for Sept., 1915, and from July 1 to Sept. 30, \$1,076,505, against \$884,976 for same period.

Grand Trunk Pacific Railway Earnings.

Approximate earnings for three weeks ended Oct. 21, \$2,810,229, against \$2,757,000 for Sept., 1915, and from July 1 to Sept. 30, \$1,076,505, against \$884,976 for same period.

Railway Land Patent. The September letters patent were issued in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—
Calgary & Edmonton Ry. 2,511.00
Canadian Northern Ry. 338.36
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co. 2,555.00

Queen's University, Kingston, Ont. The following appointments have been made: J. F. Wilson of Michigan University, Professor of Electrical Engineering; L. S. Eaton of Cornell University, Professor of Mechanical Engineering; I. C. Demarest of Columbia University, Lecturer in Latin.

Canadian Northern Railway Construction, Betterments, Etc.

Montreal Tunnel and Terminal Co.—It is reported that tenders will be called for some time in November for the building of the station at Lagacheterie St., Montreal, as the first instalment of the Montreal terminal undertaking.

The Canadian Northern Ontario Ry. consists of a line from Montreal via Hawkesbury, where the C. N. Quebec Ry. connects with the old Great Northern Ry. route, to Ottawa and on via North Bay to Port Arthur, the Ottawa-Toronto line and the Sudbury line. At present the two latter lines run into the union station, Toronto, by an arrangement with the G.T.R. In order to obtain an entrance into the North Toronto station, for which an arrangement has been made with the C.P.R., a connection between these two lines and the tracks on which the C.N.R. has equal rights with the C.P.R., is about to be built.

The connecting link between the C.N.R. Toronto-Sudbury line and the Leaside-North Toronto will leave the Duncan station yard and run eastward to a connection with the C.P.R. near the east end of the West Don bridge. A spur of high land dividing the west and main branches of the Don (which is also crossed by the C.P.R. at Donlands station) necessitates a surmount in the grades, which will be 40 ft. per mile in each direction, and a somewhat heavy cutting, but these grades will be short and will be reduced by train filling when the traffic warrants the expense. The total length of the link will be 2.2 miles. Outside of the curves forming the junctions with existing lines at either end, there will be only one curve of three degrees, and with the exception of the cutting mentioned, which is the counterpart of that on the C.P.R., the work will be light. The C.P.R. double-track viaduct over the West Don will be used jointly by both roads, as also a joint double-track to North Toronto station. This double-track is completed to Leaside Jet. and the balance is under construction. The work on this 2.2 mile link is now in progress, Angus Sinclair being the contractor, and it is expected to be completed this season.

From the same point of junction on the C.P.R. a line has been located to a point on the company's Ottawa-Toronto line near Scarboro Village and has been approved by the Board of Railway Commissioners. This has a length of 4 miles; the grade standard will conform to that of the balance of the Ottawa-Toronto line—26 ft. to the mile, as also the curvature, which will have a maximum of four degrees. The work will be of ordinary character, with the exception of a viaduct over the Don River, which will be built at mileage 4.8 from Yonge St. It will be 650 ft. long, with a maximum height of 114 ft. The substructure will consist of 20 concrete pedestal piers and 2 abutments, in all approximately 950 cu. yds. The superstructure will consist of one 100-ft., five 70-ft. and five 40-ft. deck plate girder spans and five 40-ft. towers. It will be designed for class heavy loading, Dominion Government specification 1916, and the estimated weight will be about 620 tons.

The contract for this line and the substructure of the viaduct over the Don has also been let to Angus Sinclair, and is also expected to be completed this year. The location of both lines was made by H. K. Wicksteed, Chief Engineer of Surveys, Mackenzie, Mann & Co. Karl Hoff-

man is resident engineer for the C.N.R. on both pieces of line.

The object in view in the construction of both these lines is obvious. The C.N.R. has heretofore run all its trains into the union station, and except for the local freight yard in Cherry St. and the Rosedale station in the Don valley, has no terminal of its own in the lower part of the city. The Rosedale yard has now become quite inadequate to handle the growing business, and arrangements were made some years ago for a jointly-occupied station with the C.P.R. in North Toronto, and for extensive yards and shops at Leaside. It has now become essential that these be developed and used. Incidentally the long descent of 160 ft. to the lake level will be saved for the passenger traffic and the distance to all points north shortened five miles and to eastern points three miles. On account of the low speed permissible along the lake front the gain in time by the new route will average nearly half an hour. The distance from the union station to Rosedale is 3.8 miles and to Duncan is 11.1 miles. Tadmorden, where the two lines separate, the one to Parry Sound and the other to Ottawa being at mileage 5.06.

The Board of Railway Commissioners has authorized the altering of a bridge over the South Magnetawan River, mileage 34.85 from Parry Sound, Ont., also the building of a bridge across Current River, mileage 145.8 west from Jellicoe, and 2 miles east of Port Arthur, Ont.

Canadian Northern Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the extension of the Winnipeg and Northern Ry. branch, mileage 48.56 to 62.78.

The Minister of Public Works for Manitoba informed a deputation from the Fort Alexander district recently that the Government will give every consideration to its request that the Province guarantee bonds of the C.N.R. for building an 18-mile line from Balsam Bay to Fort Alexander. Balsam Bay is 57 miles from Winnipeg, and is 4 miles on the Winnipeg side of the line now terminating at Grand Marais.

We are officially advised that the company expects to buy 35 miles of track west of Eston, Sask., this year.

We are officially advised that W. J. Cowan, Winnipeg, has been given a contract for grading on the Larch Lake branch, extending from Dumblane, Sask., for 35 miles in a southwesterly direction. Work on this line was started in August and is being pushed forward as fast as labor and other conditions permit.

Among the other works reported to have been completed during the year is the building of new stations on the Goose Lake line, the putting in of several new sidings, the erection of a three-stall locomotive house, with coal filling plant, a water tank, and the erection of a yardmaster's office at Drumheller, Alta. Drumheller is the junction of the line from Saskatoon with the Vegreville-Calgary line. Three steam shovels have been at work during the summer on bridge filling work west of Humboldt, and two on the Goose Lake line, taking out ballast for the line.

In connection with the building of the line from Hanna, mileage 263, on the Saskatoon-Calgary line, southeasterly to Medicine Hat, we are officially advised that construction was started in August

and that it is the intention to have the line completed this year. The Cowan Construction Co., Winnipeg, have the contract for 60 miles. A late press report states that about 23 miles have already been graded.

The Moose Jaw, Sask., City Council discussed, on Oct. 3, a plan for giving the C.N.R. connection with the civic spur line, and thus enabling it to transfer traffic with the C.P.R. A provisional agreement was reached, and the city also arranged to ask the Saskatchewan Government to give a provisional guarantee of bonds for an independent C.N.R. terminal in the city in lieu of the present guarantee for a joint terminal with the Grand Trunk Pacific.

A press report from Edmonton states that the Alberta Government has been advised that 100 miles have been graded on the Oliver-St. Paul de Metis line, the grade now reaching to within 25 miles of St. Paul, the objective point, and that it is expected to lay track on the 100 miles this year.

Plans have been deposited with the Public Works Department, Ottawa, showing location, etc., of a bridge across the Sturgeon River on lot 23, tp. 56, range 23, west of 4th meridian.

The spur track from Brule, mileage 23.45, on the transcontinental line to the Brule Lake coal field was reported to be practically completed Oct. 11. The collieries being opened are controlled by a company in which F. H. Phippen, General Counsel for the C.N.R., and Joseph Errington, of the company's resources department, are interested, and of which P. C. Andrews is General Manager.

Canadian Northern Pacific Ry.—We are officially advised recently that no contract had been let for the construction of the Kamloops-Okanagan branch.

While M. H. MacLeod, General Manager and Chief Engineer, was at the Pacific Coast recently, he inspected the practically completed car shops, the new car ferry dock and other terminal facilities at Port Mann, and discussed matters connected with the work in progress at the False Creek terminals, Vancouver, with the city council. He is reported to have said that a considerable amount of additional work would be started forthwith. One of these works is the building of the freight sheds, for the erection of which a contract is reported to have been let to Macdonald, Nettleton & Bruce, Vancouver, at an estimated cost of \$125,000.

The new freight offices and shed at Vancouver will be erected at False Creek to the south of and in close proximity to the company's new passenger station. The freight offices will occupy a 2 story block, having a frontage of 100 ft., and a depth of about 55 ft., giving ample accommodation for the various departments. The building is designed along simple, but attractive, lines, and will have its exterior walls constructed generally with brick with stone dressings and features. The floors, except basement, will be constructed of timber finished with maple. The basement floor will be cement finished on concrete slab. Lavatory accommodation will be provided for both men and women on each floor, and ample light and ventilation will be available in all parts of the building. The roof will be of flat type. The building will be supported by pile foundation.

The freight shed, which will be built immediately east of the freight office block, will be 40 x 800 ft., supported on pile foundations. The roof will be supported on steel columns and will be constructed of steel trusses carrying wood purlins and covered with 2 in. plank, finished with tar and gravel roofing. The floors will be of heavy timber construction, finished with 2 in. rough and $\frac{7}{8}$ in. finished flooring. The walls to level of door heads will be constructed of studing with $\frac{7}{8}$ in. sheeting outside and inside. The outside surface will be finished with galvanized corrugated iron. Along the entire length of the building above door heads will be a continuous glazed transom light. On the track side of shed doors will be continuous, and on teaming side doors will occur only in alternate 16 ft. bays. The shed will be divided into four compartments by the introduction of three 13 in. fireproof walls at equal intervals along the length of shed; provision will also be made at extreme east end of shed for cold storage, and at the west end (that is the end nearest the freight office block) rooms will be provided for the shed foreman, porters and for staff lavatory. About midway up the shed will be located the customs office. Electric light will be used in both freight offices and shed.

Along the track side of shed will be run three lines of tracks and beyond the farthest out of these will be a distributing platform 13 ft. wide, which will be continued along the entire length of the shed.

The buildings have been designed by the company's architects, Pratt & Ross, of Winnipeg and Vancouver, and the cost, exclusive of tracks and teamways, will probably run to about \$150,000.

Railway Finance, Meetings, Etc.

Boston & Maine Rd.—A U. S. Court at Boston, Mass., Oct. 16, authorized certain minority shareholders to intervene in the receivership proceedings now pending, and fixed Oct. 30, as the date of hearing arguments.

A United States court in New York, on Oct. 20, extended to Jan. 1, 1918, the date fixed for the sale of the New York, New Haven & Hartford Rd.'s holdings in the B. & M. Rd.

The Canadian Northern Ry. has given notice that the net earnings for the half year ended June 30 were insufficient to enable the interest to be paid on the 5% income charge convertible debenture stock on Nov. 2.

Ottawa Terminals Ry.—The board of directors elected at the recent annual meeting, for the current year, is:—E. J. Chamberlin, President; H. G. Kelley, Vice President; Frank Scott, Secretary and Treasurer; J. E. Dalrymple, R. S. Logan, H. R. Safford and W. H. Biggar, K.C.

Toronto, Hamilton & Buffalo Ry.—A recent press report stated that the company was issuing \$10,000,000 4½% consolidated bonds due in 1966 to retire a maturity bond issue and to provide some \$5,000,000 for betterments. We are officially advised that the report is incorrect. Under the Dominion Parliament's authority, a mortgage has been made to secure an issue of \$10,000,000 of consolidated mortgage, bonds and \$2,000,000 par value of them have been sold to the Canadian Pacific, the Canada Southern, New York Central and Michigan Central Companies.

Filing of Freight Tariffs on Less than Statutory Notice.

Commissioner McLean, of the Board of Railway Commissioners, gave the following judgment recently:—

"Under date of May 26, 1916, complaint was received from T. M. Stevens & Co., Vancouver, B.C., stating that they had been advised by one of the railway companies that an advance was to be made in the rates on sago and tapioca from 80c to 90c per 100 lb., and on spices from 80c to \$1 per 100 lb. It was stated that prior to the beginning of the war there had been a through rate of \$1.30 per 100 lb. on these commodities, and it was stated that the division of this rate to the railways would not exceed 70 to 75c per 100 lb. It was stated, further, that after trans-Pacific freights advanced, the railway companies put in a rate of 80c, which was quite satisfactory to the applicants, and that the applicants had developed a considerable business on these rates. It was urged by the applicants that the railway companies be enjoined from making an advance pending a general hearing and justification of the rates in question.

"As will be noted, the rates in question are import rates from Vancouver to points in Eastern Canada.

"In answer to the complaint as launched the Great Northern Ry. replied as follows: 'The rates as specifically named in complainants' letter on sago and tapioca from 80c to 90c carloads is correct. Proposed advances as stated are to become effective Aug. 1. These rates are proportional rates applying on traffic which originates in the Orient. The conditions under which the present rates were established do not exist today. At the time rates were originally established a great deal of the Oriental tonnage moved into Atlantic ports via direct steamship lines and the present rates from Vancouver and Puget Sound ports were established in order to enable the rail carriers from such ports to obtain a share of this Oriental traffic, in connection with the steamship lines, operating from the Orient to Vancouver and Puget Sound ports. The company considers the proposed advances to be fair and consistent, since the former conditions do not now exist, as to the direct movement of Oriental traffic to United States and Eastern Canadian ports as today. There is a scarcity of bottoms that in the past have been handling Oriental traffic direct to Atlantic ports and the company thinks, therefore, that carriers are warranted in making the slight advances that they have. The company also says that there has been a general advance made covering all commodities, and in a great number of cases the shippers as well as consignees were interviewed as to the possibility of permitting the carriers to make these advances. The condensed result has been that the shippers as a whole saw no objections to these slight advances; for instance, the carriers advanced the import rate on tea, carloads, from \$1 to \$1.10. Before this advance was concurred in by interested lines, the tea trade was canvassed, with results that most of the shippers and consignees of tea informed the carriers that rate points could be advanced from 10 to 25%. In view of these statements from the tea shippers as well as similar statements from other shippers on other commodities, the company considers the advances

made on sago, tapioca, and spices to be entirely proper and in keeping with the manner in which the present rates were established.

"The company respectfully submits that the advanced rates ought to be maintained."

"Subsequently a tariff showing the increased rates complained of was filed. Other increases are also set out in this tariff. The matter of justifiability of the rate increase or increases is not gone into here, as the immediate question involved is entirely one of the legality of the filing. The tariff in question is East-bound Import Tariff 2C-D cancelling a similarly described tariff 26-C. This tariff quotes import class rates and commodity rates from specified points on the Pacific Coast of the United States and from Prince Rupert, Vancouver and Victoria, B.C., to points in United States and Canada as set out in the tariff. While the tariff is issued by R. H. Countiss, agent for the railways, and deals with the rates both on United States and Canadian movements, what is especially concerned here is the question of the requirements of the Railway Act in regard to filing.

"The tariff which is numbered C.R.C. No. 364 has also an I.C.C. No. 1026. On the face of the tariff is the notation that it is issued under the authority of Rule 71, Interstate Commerce Commission Circular 18-A. Under this ruling, which is concerned with export and import tariffs, it is set out that, 'in consideration of unusual and special circumstances surrounding the movement of traffic exported to or imported from foreign countries not adjacent to the United States and which moves through ports of the United States or Canada on the Pacific Ocean as to said traffic and confined to tariffs which contain only rates applicable thereto, the commission, by its order of Oct. 24, 1908, authorizes carriers to make changes in said rates upon notice to the commission and to the public in manner prescribed by law of three days as to changes which affect reductions in rates or charges, and like notice of 10 days as to changes which affect increases in rates or charges.'

"The tariff as filed bears on its face the statement that it is issued July 7, 1916, effective Aug. 1, 1916. As a matter of fact, the filing date with the Board was later, it not being until July 13 that the tariff in question was received. Under sec. 328 of the Railway Act, as amended by 1 & 2 Geo. V, chap. 22, sec. 11, it is provided that when a special freight tariff advances any toll previously authorized to be charged under the Railway Act, the company is to file and publish such tariff 30 days previous to the date the tariff is intended to take effect. In view of the fact that the tariff was issued as of July 7, 1916, effective Aug. 1, 1916, and the further fact that it was not filed with the board until July 13, the non-compliance with the provisions of the Railway Act was taken up with the railway companies. The answer of the Great Northern is submitted by its Solicitor, Mr. Haydon, said answer being sent out in the letter of the General Solicitor of the Company. It states, inter alia, that the 'Interstate Commerce Commission usually allows rates on import traffic to be put into effect on short no-

tice; that under the circumstances the Canadian Commission should do likewise.

"The board is advised by the C.P.R. as follows:—

"In this matter, through an oversight, R. H. Countiss, who issued Transcontinental Tariff D-26, neglected to file it with the board the full 30 days in advance of its effective date as required by sec. 328 of the Railway Act. Accordingly, I have to request that the board consent to alter the effective date of the tariff to Aug. 8, and arrangements will be made to refund, on application, the excess charges on any shipments which moved between Aug. 1 and Aug. 8, when it should properly have been effective."

As to the position taken by the General Solicitor of the Great Northern that the board should grant short notice on import traffic, that is manifestly a question of what power is given under the Railway Act. The board is bound by the ex-

PLICIT provisions of the Railway Act. As to the suggestion contained in the latter paragraph of the letter of the Canadian Pacific as above quoted, the initial filing not having been in compliance with the provisions of the Railway Act, there is no power in the board to alter the effective date of the tariff to Aug. 8. The full 30 days notice is required in connection with filing with the Board. At best, however, there was only a period from July 13 to Aug. 1 covered by notice, and this does not establish a credit of so many days in connection with a later and amended notice of filing. The tariff as filed has not met the requirements of the Railway Act, and the railway companies cannot legally collect rates thereunder in respect of movements within the scope of the Railway Act. If the railway companies desire to put the tariff in question into force, immediate steps should be taken to file in accordance with the terms of the Railway Act.

Changes in Names of C.P.R. Divisions, Districts and Subdivisions.

Commencing with the going into effect of the autumn time tables the 8 grand divisions on the C.P.R. have been changed to districts, their names being also changed in certain cases, and the districts have been changed to divisions, the territorial limit of each remaining as heretofore. The alterations in names are as follows:

Atlantic Division changed to New Brunswick District; District 1 changed to Brownville Division; District 2 changed to Woodstock Division.

Eastern Division changed to Quebec District; District 1 changed to Farnham Division; District 2 changed to Montreal Terminal Division; District 3 changed to Laurentian Division; District 4 changed to Ottawa Division; District 5 changed to Smiths Falls Division.

Ontario Division changed to Ontario District; District 1 changed to Trenton Division; District 2 changed to London Division; District 3 changed to Bruce Division; District 4 changed to Toronto Terminal Division.

Lake Superior Division changed to Algoma District; District 1 changed to Sudbury Division; District 2 changed to Chapleau Division; District 3 changed to Schreiber Division.

Manitoba Division changed to Manitoba District. Fort William Terminals changed to Fort William Terminal Division. District 1 changed to Kenora Division; Winnipeg Terminals changed to Winnipeg Terminals Division; District 2 changed to Portage Division; District 3 changed to Brandon Division; District 4 changed to Souris Division.

Saskatchewan Division changed to Saskatchewan District; District 1 changed to Regina Division; District 2 changed to Moose Jaw Division; District 3 changed to Saskatoon Division.

Alberta Division changed to Alberta District; District 1 changed to Medicine Hat Division; District 2 changed to Lethbridge Division; District 3 changed to Calgary Division; District 4 changed to Edmonton Division.

British Columbia Division changed to British Columbia District; District 1 changed to Revelstoke Division; District 2 changed to Vancouver Division; District 3 changed to Nelson Division; District 4 changed to Cranbrook Division.

In order to avoid any subdivision bearing in some cases the same name as a division, the following changes in names of subdivisions have been made:

New Brunswick District—Brownville Subdivision changed to Mattawankeag Subdivision; Woodstock Subdivision changed to Shogomoc Subdivision.

Quebec District—Trenton Subdivision changed to Adirondack Subdivision; Quebec Subdivision changed to Trois Rivières Subdivision; Ottawa Subdivision changed to Lachute Subdivision; Smiths Falls Subdivision changed to Winchester Subdivision; Laurentian Subdivision changed to St. Agathe Subdivision.

Ontario District—Toronto Subdivision changed to Oshawa Subdivision; London Subdivision changed to Galt Subdivision; Trenton Subdivision changed to Belleville Subdivision.

Algoma District—Sudbury Subdivision changed to Parry Sound Subdivision; Chapleau Subdivision changed to Nemegos Subdivision; Schreiber Subdivision changed to Heron Bay Subdivision; Algoma Subdivision changed to Thessalon Subdivision.

Manitoba District—Fort William Subdivision changed to Kaministiquia Subdivision; Kenora Subdivision changed to Keewatin Subdivision; Souris Subdivision changed to Glenboro Subdivision; Brandon Subdivision changed to Carberry Subdivision.

Saskatchewan District—Regina Subdivision changed to Kisbey Subdivision; Moose Jaw Subdivision changed to Indian Head Subdivision; Saskatoon Subdivision changed to Sutherland Subdivision.

Alberta District—Medicine Hat Subdivision changed to Maple Creek Subdivision; Calgary Subdivision changed to Brooks Subdivision; Lethbridge Subdivision changed to Taber Subdivision; Edmonton Subdivision changed to Ledue Subdivision.

British Columbia District—Cranbrook Subdivision changed to Fernie Subdivision.

The American Association of Traveling Passenger Agents held its 44th annual convention at Philadelphia, Pa., Oct. 2 and 3, when there was an attendance of over 400 delegates.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost exclusively from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who has notice any error in our announcements will confer a favor by advising us.

Canadian Government Railways.—F. W. ROBERTSON, District Passenger Agent, Halifax, N.S., has also been appointed acting Superintendent, Sleeping and Dining Car Service, vice L. B. Archibald, who has been granted temporary leave of absence owing to ill health.

W. A. DUFF, Engineer of Bridges, has been appointed Assistant Chief Engineer. He continues to perform the duties of Engineer of Bridges, and has charge of the Halifax Ocean Terminals, and will perform such other work as may be assigned to him by the Chief Engineer. Office, Moncton, N.B.

A. C. BARKER has been appointed acting Superintendent of Telegraph and Time Service, Intercolonial Division. Office, Moncton, N.B.

S. ALLANACH, heretofore Roadmaster, Fredericton Subdivision, Intercolonial Division, Fredericton, N.B., has been appointed Roadmaster, Campbellton Subdivision, Intercolonial Division, vice A. B. Gorham, transferred. Office, Campbellton, N.B.

A. B. GORHAM, heretofore Roadmaster, Campbellton Subdivision, Intercolonial Division, Campbellton, N.B., has been appointed Roadmaster, Leonard Subdivision, Intercolonial Division, vice J. Bury, transferred to Transcontinental Division. Office, Campbellton, N.B.

J. RUPP, heretofore Roadmaster, Leonard Subdivision, Intercolonial Division, Campbellton, N.B., has been appointed Roadmaster between Napadogan and Edmundston, Transcontinental Division. Office, Edmundston, N.B.

H. A. IRVING, heretofore chief clerk to Superintendent, Fort William, Ont., has been appointed acting Trainmaster, District 3, Transcontinental Division, Graham, Ont.

J. W. CAMPBELL, heretofore section foreman, Sunstrum, Ont., has been appointed acting Roadmaster, Graham, Ont., vice P. B. Bernard, resigned.

H. G. REID, heretofore Master Mechanic, District 3, Transcontinental Division, Transcona, Man., has been appointed Assistant Superintendent of Rolling Stock, reporting to Superintendent of Rolling Stock, Moncton, N.B., and has direct charge of the Transcona shops and will perform such other duties as may be assigned to him. Office, Transcona, Man.

JOHN BIRSE, heretofore Road Foreman of Locomotives, Graham, Ont., has been appointed District Master Mechanic, District 3, Transcontinental Division, and his former position has been abolished. Office, Transcona, Man. The position of Master Mechanic, District 3, heretofore held by H. G. Reid, who has been appointed Assistant Superintendent of Rolling Stock, has been abolished.

Canadian Northern Ry.—H. J. LECLAIRE, heretofore Soliciting Passenger Agent, Toronto, has been appointed Travelling Passenger Agent, Montreal, vice C. A. Langevin.

F. C. TURNER has been appointed Travelling Passenger Agent, Montreal.

J. B. SMITH has been appointed Rule Instructor, Lines East of Port Arthur. Headquarters, Toronto.

J. E. BERRY, heretofore Yardmaster, Regina, Sask., has been appointed Gen-

eral Yardmaster, Saskatoon, Sask.

J. L. LOUNSBERRY has been appointed Travelling Agent. Headquarters, 510 Woolworth Bldg., New York, N.Y.

H. S. HEAD has been appointed Travelling Agent. Headquarters, 510 Woolworth Bldg., New York, N.Y.

A. DeWITT FOSTER has been appointed Travelling Immigration Agent. Headquarters, 64 West Adams St., Chicago, Ill.

Canadian Pacific Ry.—E. W. BEATTY K.C., Vice President and General Counsel, has been added to the Executive Committee, the number of directors on which has been increased from 5 to 6.

DR. H. A. BEATTY, heretofore Chief Surgeon and Medical Officer, Eastern Lines, has been appointed Chief Surgeon and Medical Officer for the system. Office, Toronto.

N. S. DUNLOP, Insurance and Tax Commissioner, having resigned on account of ill health, the position has been abolished. All matters pertaining to assessments, taxes, local improvements, etc., affecting the company's property on Eastern Lines, will be handled by FRANK TAYLOR, Right of Way and Tax Agent, Montreal. As the company is setting up its own insurance fund, all insurance matters will be handled by E. MOORE, of the Financial and Accounting Vice

ern Lines, s, etc., in connection west of Fort William, used in connection

ALLAN PURVIS, General Superintendent, Quebec District, Montreal, has been appointed General Superintendent,

J. H. BOYLE, Superintendent, Farnham Division, Quebec District, Farnham, will act as General Superintendent, Quebec District, Montreal, during Mr. Purvis' absence in Toronto.

W. J. UREN, Superintendent, Trenton Division, Ontario District, who has been acting as General Superintendent, Ontario District, since Mr. Arnold became

L. G. ROGERS, Assistant Superintendent, Trenton Division, Ontario District, Trenton, who has been acting as Superintendent of that district while W. J. Uren has been acting as General Superintendent, Ontario District, has returned

H. H. TRIPP, heretofore Resident En-

H. J. BLACK, heretofore Resident Engineer, Kenora, Ont., has been appointed

E. H. GODWIN has been appointed Alta., vice E. Cotty, who was Manager of the service.

W. E. CLINE, heretofore Chief Dispatcher, Winnipeg, has been appointed Trainmaster, Macleod, Alta., vice W. M. Ansley, whose appointment as Trainmaster, Assiniboia, Sask., was announced in our last issue.

M. G. MURPHY, heretofore District Passenger Agent, St. John, N.B., has been appointed General Agent, Passenger Department, C.P.R. and Canadian Pacific Ocean Services, Ltd., Detroit, Mich., and not merely for the C.P.R., as mentioned in our last issue.

G. G. McKAY, heretofore City Passenger Agent, Detroit, Mich., has been appointed Travelling Passenger Agent for the lower peninsula of Michigan, vice E. C. Oviatt, transferred to other duties in Michigan. Office, Detroit.

A. E. EDMONDS, heretofore General Agent, Passenger Department, Detroit, Mich., has been appointed City Passenger Agent there, vice G. G. McKay, transferred. He deals with all requests for sleeping car reservations.

W. C. ELMER has been appointed City Ticket Agent, Detroit, Mich.

Superintendent, Sleeping, Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, has been appointed Purchasing Agent, Canadian Pacific Ocean Services, Ltd., Vancouver, B.C.

T. J. BURNS, heretofore Passenger China, has been appointed, vice J.

ghai, Chicago, St. Paul, Minneapolis &

Main St. E. R. CUNNINGHAM, heretofore Travelling Agent, C. St. P. M. & O. R.

Grand Trunk Ry.—W. H. SAMPLE, heretofore Master Mechanic, Western Lines, Battle Creek, Mich., has been appointed Master Mechanic, Eastern Lines.

borough, Ont., vice B. A. Rose, resigned.

B. J. FARR, heretofore Locomotive appointed Master Mechanic, Western Lines, vice W. H. Sample, transferred.

appointed:—Niagara Falls, Ont., W. Kew; Goldstone, Ont., C. S. Groh; Belgrave, Ont., R. Yule.

Grand Trunk Pacific Ry.—W. A. B. RUSSELL has been appointed Commercial Agent, Regina, Sask., vice A. E. McMaster, promoted.

A. E. McMASTER, heretofore Commer-

pointed Division Freight Agent, Edmonton, Alta., vice W. J. P. McGregor, granted leave of absence.

W. E. SIMMONS, heretofore Chief Dispatcher, Tofield, Alta., has been appointed Chief Dispatcher, Biggar, Sask., and the dispatching office at Tofield has been closed in a readjustment of territory.

JAMES PORTEOUS, heretofore Car Inspector, Smithers, B.C., has been appointed Car Foreman there, vice F. E. Dymond, transferred.

F. E. DYMOND, heretofore Car Foreman, Smithers, B.C., has been appointed Car Foreman, Prince Rupert, B.C., vice C. A. McNiece, resigned.

The following station agents have been appointed:—Spy Hill, Sask., E. P. Guay; Waldron, Sask., J. M. Carson; Unity, Sask., M. L. Myers; Lebret, Sask., H. L. Cole; Griffin, Sask., F. C. Scheppele; Northgate, Sask., J. R. Wilson; Lawson, Sask., D. L. Cozeart; Riverhurst, Sask., B. Clee; Ryley, Alta., A. E. Bodieu; Swallow, Alta., J. E. Rivard.

Intercolonial Ry.—See Government Railways.

Michigan Central Rd.—J. R. CAMPBELL, heretofore Assistant Yardmaster, Montrose, Ont., has been appointed General Yardmaster, Windsor, Ont., vice F. McElroy, whose appointment as Trainmaster, St. Thomas, Ont., was announced in our last issue.

National Transcontinental Ry.—See Canadian Government Railways.

New York Central Rd.—A. T. HARDIN, Vice President in charge of operation, has been appointed Assistant to the President, regardless of department, and in connection with lines not directly operated. He continues as Vice President, N.Y.C.R., and has also been appointed Vice President, Ottawa & New York Ry., Michigan Central Rd., and Cleveland, Cincinnati, Chicago and St. Louis Rd. Office, New York.

P. E. CROWLEY, heretofore Assistant Vice President, Operating Department, has been appointed Vice President, Operating Department, N.Y.C.R. and Ottawa & New York Ry., vice A. T. Hardin, promoted. Office, New York.

Ottawa & New York Ry.—See New York Central Rd.

Pere Marquette Rd.—JOHN HANDFORD, heretofore valve setter, has been appointed General Foreman, St. Thomas, Ont., vice G. W. Cook, resigned.

St. John Ambulance Brigade.—The annual inspection of the three nursing divisions of the St. John Ambulance Brigade—C.P.R., Fort Garry and Fort Rouge—took place at Winnipeg, Oct. 11. The C.P.R. division is composed of wives and daughters of C.P.R. men, and is actively engaged in sending supplies to the Red Cross Society, in addition to doing first aid and other work locally.

Quebec Railway, Light & Power Co.'s Traffic. During the year ended June 30, 1916, the total number of passengers carried on the City Division, including transfers, was 15,227,583. On the Montmorency Division the total number of passengers carried was 1,890,207, and 9,253 car loads of freight were hauled. fiscal year.

The C.P.R. Opened, on Oct. 12, in the Shaughnessy Building, Montreal, an exhibition of toys and novelties made in New England States by fishermen and others during the winter nights. The C.P.R. has made this collection with a view of demonstrating the possibilities of a Canadian toy industry.

Pacific Great Eastern Railway's Annual Meeting.

At the annual meeting in Victoria, B.C., recently, the following report was presented for the year ended June 30, over the signature of J. W. Stewart, President:—

In many respects, considering only the progress of construction, the year in review has been an unfavorable one to the company's objects. Under the pall of the greatest war in the history of man, it has been impossible, during this time, to accomplish more than a small percentage of the work remaining to be done at the close of the last fiscal year. Early in the spring of 1912, the company entered into an agreement with the British Columbia Government, calling for the completion of the line from Vancouver to Fort George (now Prince George) by July 1, 1915. This agreement was, of course, made in good faith between the company and the government, the company confident of its ability to do its part and the government expecting nothing less. From causes with which you are familiar the requisite progress was not made and it was seen that more time would be required to complete the undertaking, and, being apprised of the facts, the government, in the spring of 1914, increased the amount of its assistance to the enterprise.

It might be well here briefly to recapitulate the financial assistance rendered by the government. In 1912, the government guaranteed securities of the company to the extent of \$35,000 a mile for 450 miles of line; in 1914, this guarantee was extended over the entire mileage of 480 miles, and additional securities to the extent of \$7,000 a mile were guaranteed, making a total of \$42,000 a mile for 480 miles, amounting to \$20,160,000. Of these securities, \$14,234,805 were sold and the balance \$5,925,195 pledged to secure a loan of \$4,800,000, prior to the date of our last annual meeting.

During the spring of this year your directors unreservedly presented the status of the undertaking to the government, which brought down before the Legislative Assembly an important measure of relief which was enacted into law, authorizing the Provincial Minister of Finance to advance by way of loan to the company \$6,000,000 at the actual cost to the government of obtaining same, and repayable at or before the expiration of 10 years. The funds thus provided will, in the opinion of your Chief Engineer, enable the completion of that portion of the line between Squamish, at the head of navigation, Howe Sound, and Prince George, where connection will be made with the Grand Trunk Pacific transcontinental line.

The summons of patriotism to service overseas has been so faithfully obeyed by the youth and the eligible older men of this province that it is now impossible adequately to man the work, and the difficulty experienced in obtaining track and bridge material, occasioned by the unprecedented demands of the war and industry upon the metal markets, is another militating factor in determining the time required to complete your line of railway. Secure in the knowledge that the results so far attained are in the highest degree satisfactory, and confident that the best efforts possible were made to carry on the work as originally contemplated, you may rest assured that no effort will be spared in the future that will

promote the cause of the undertaking. As, upon the close of the year gone by, in the fortunes of our beloved Canada and the Motherland and our gallant allies an era of higher hopes has dawned and notable success already attained, earnest of greater achievement, so we may hope in the ensuing months for the dawning of brighter days upon our own undertaking. The settler is beseeching us to hasten the completion of the railway to enable him to get in to the land; the forests and mines are crying out to us to move their abundant products to market; and the teeming plains of the northland are groaning for deliverance. Abundant traffic is in prospect waiting upon the completion of the line whose need becomes daily more urgent. It therefore behooves us to continue our earnest efforts to that end.

The directors for the current year are: J. W. Stewart, President; D'Arcy Tate, K.C., Vice President and General Counsel; T. Foley, Vice President; F. Wilson, Land Commissioner, and E. F. White. The other officers are: R. D. Thomas, Secretary-Treasurer; Jno. Callaghan, Chief Engineer; A. H. Sperry, Land Commissioner.

Telegraph, Telephone and Cable Matters.

A. Malcolm has been appointed chief operator, C.P.R. Telegraphs, Montreal, vice J. G. Davies, who resigned recently to enter Great North Western Telegraph Co.'s service at Winnipeg, as announced in our last issue.

G. H. Walters is acting as a special representative of the Great North Western Telegraph Co.'s traffic department at Winnipeg, pending the appointment of a chief operator in the place of B. S. Round who has resigned.

M. S. J. Baker was acting Superintendent of Telegraphs, Saskatchewan Division, C.P.R., and H. B. McIntyre was acting in a similar capacity, British Columbia Division, C.P.R., during the absence of D. Coons and R. N. Young, respectively, on vacation.

J. G. Davies, heretofore chief operator and circuit manager, C.P.R. Telegraphs, Montreal, has been appointed Superintendent, District 4, and Manager Winnipeg office, Great North Western Telegraph Co., J. Padington, Superintendent, and S. Goldstein, Local Manager, having resigned. Biographical details were given in our last issue.

At the Great North Western Telegraph Co.'s annual meeting at Toronto, Oct. 2, the following board was elected for the current year:—Z. A. Lash, K.C., President; Adam Brown, Vice President; G. D. Perry, General Manager; Jas. Hedley, —Hon. J. K. Kerr, K.C., Aemilius Jarvis, F. B. Hayes, D. B. Hanna and R. P. Ormsby. A. C. McConnell is Secretary and Auditor, and D. E. Henry is Treasurer.

Government Railways Rules.—An order-in-Council has been passed rescinding portions of the general train an interlocking rules for use on the Canadian Government Railways approved Jan. 22, 1914, and substituting new sections therefor. The amended sections cover definitions and indications under the headings "Automatic block signals," and "Interlocking signals."

The Acadia Coal Co. has received 150 all steel mining cars from Canadian Car and Foundry Co.

Electric Railway Department

Electrification of Lake Erie and Northern Railway.

The L.E. and N.R., which is a C.P.R. subsidiary, is a single track, standard gauge line, with Galt, Ont., as its northern terminus, and Port Dover, Ont., as its southern terminus. It runs through the towns of Paris, Brantford, Waterford, and Simcoe, to Port Dover, on Lake Erie. It is expected that a coal ferry service will be put in operation from Port Dover

stations and an extra portable station for use where necessary. This portable substation was fully described in our June issue. Had 600 volts been decided upon, 6 substations would have been required, together with a large amount of overhead feeder, etc.

The traffic conditions require, for conductivity, the equipment of two 0000 B. &

which is 75,000 c.m., corresponding in conductivity to two 0000 copper wires. The sag of this messenger in the standard 150 ft. span is 2 ft. at 60° Fahrenheit. At intervals of a mile the messenger and the trolley wires are anchored in both directions, galvanized iron clamps and guy cables being utilized for this purpose.

The use of aluminum cable steel reinforced avoids the necessity of having additional feeder cables with the accompanying insulators. The contact wire is 0000 B. & S. standard grooved, and is of double galvanized steel. It is supported by means of stamped steel hangers, having a stem designed in the form of a loop and is of stamped sheet steel galvanized. The loop fits over a stamped sheet steel clamp, so arranged that by tightening up the bolts it clamps the messenger cable. The arrangement affords a flexible suspension for the trolley wire at all points, and at the same time prevents any wear of the aluminum cable by reason of the constant sliding up and down of the flexible hanger. Electrical connections are provided for between the messenger cable and contact wire by means of a parallel groove clamp and 00 stranded, copper jumpers attached to feeder ears on the steel trolley.

The line is 51 miles long, with various sidings and passing tracks, 40 miles being tangent track. The grades are comparatively light, and the main line ones are all easy with the exception of a few short lengths near yards, which are 7° to 9°. Power for operation is obtained

in the near future, and that a heavy coal traffic will result. The line was completed from Galt to Brantford and put in operation on Feb. 7 of this year, to Simcoe on June 2, and to Port Dover on July 22. Connection is made at Galt with the Galt, Preston and Hespeler Ry., another C.P.R. subsidiary, which has been in operation for some years. This connecting road is operated at 600 volts and runs from Galt to Kitchener, Ont., with a branch line from Preston to Hespeler, 20 miles in all. The L.E. & N.R. was built to steam road standards, 85 lb. T. rails were used, and bonded with 0000 copper, electrically welded bonds.

In approaching the problem of electrification many very important considerations had to be kept in mind, in order to construct the line for electrical operation and to take advantage of the very latest practice in the type of system and overhead construction, bearing in mind minimum first cost, combined with durability, simplicity, and efficiency of operation. After a careful investigation of the various types of construction and kinds of material available, it was decided to operate the line at 1,500 volts. One of the reasons for adopting this voltage was the fact that the Galt, Preston and Hespeler Ry., with which the line connects, is operated on 600 volts, and there is a possibility that it will be changed over to 1,500 volts. At present, therefore, it is possible to run the L.E. & N.R. cars over the G., P. & H. Ry. at half speed, without changing the equipment. Later, when the connecting road is changed over to 1,500 volts, it will be possible to operate cars from Kitchener to Port Dover on one voltage. Another reason for the adoption of 1,500 volts as an operating voltage was the fact that substations with such a voltage could be arranged at long distances and would be few in number. The system now operates two permanent sub-

S. gauge copper wires throughout the length of the line, and in order to obtain the simplest possible construction, avoiding the necessity of additional feeder cables, insulators, etc., it was decided to use a messenger cable having the com-

Electric Locomotive, Lake Erie and Northern Railway.

bined qualities of maximum strength with the necessary conductivity for this purpose. Aluminum cable steel reinforced was therefore decided upon as a messenger cable. This cable consists of an extra high strength, double galvanized, steel core, around which are stranded 54 pure aluminum wires, the cross section of

from the Hydro Electric Power Commission at Galt, Brantford, and Simcoe. The power is received at the substations at 26,000 volts, 3-phase, 25-cycles, and is stepped down through transformers and changed by means of rotary converters to 1500 volts direct current. The substations at Brantford and Simcoe are now in

operation, and it is planned to use temporarily a portable substation at Galt, until such time as the connecting road is changed to 1,500 volt operation, when a permanent station will be erected at Preston.

Two 60-ton, Baldwin-Westinghouse electric locomotives, of the double truck type, mounted on 36 in. cast steel, steel tired wheels, are used for heavy traffic. The motors are of the Westinghouse 750 volt railway type, wound for and operated two in series permanently on 1,500 volts, and have a capacity of 94 kw. or 125 h.p. They are arranged for forced ventilation and are of the field control type. While air for cooling the motors is normally provided by a motor driven blower, each motor has a fan at one end of the armature which will furnish sufficient ventilation to operate the locomotive at three quarter capacity in case of accident to the blower. The control equipments used on the locomotives are of the electro pneumatic type. The various main circuit connections are made by individual or unit switches arranged compactly in a group and operated by compressed air. Master controllers are located at both ends of the locomotive cab. Each controller has two levers, one for notching up and one for reversing. The

should there be other equipments in operation at the time.

For passenger service 8 standard 60 ft., interurban cars are used; they consist of 6 motor cars and 2 trailers. Two of the motor cars are of the passenger and express type and are equipped with Westinghouse motors. The arrangement of equipment is such that 2 motors are permanently in series and the 2 pairs then operate in parallel, giving the cars a speed of 45 miles an hour. The control equipment is of the Westinghouse A.B. electro pneumatic type. The compressor and lighting systems are both operated direct from the 1,500 volt line, thus making the car a straight 1,500 volt one without any complications of dynamotor or other accessories. This equipment is more or less unique in this respect. All cars, both motor and trailer, are equipped on both platforms with master controllers, so that a train may be operated from any platform.

Sherbrooke Railway and Power Co's Report.

Following are extracts from the report for the year ended June 30:—The attention is called to the fact that owing to

Your directors regret to report the death of the late General Manager, N. C. Pilcher, who was killed while bravely fighting with his regiment in France. He was highly commended for his work by his commanding officer.

This summer, J. H. Trimmingham, the Superintendent, left for overseas service with the motor boat patrol, and Capt. Thos. Irving, the Assistant Accountant, with the 117th Eastern Townships Battalion. During Mr. Trimmingham's absence, Chas. Johnstone, a very efficient officer of the company, has been appointed acting Manager.

Profit and Loss Account for Year Ending June 30th, 1916.

Gross revenue from railway, power, light, real estate, rentals, etc.	\$140,069.11
Operation, maintenance, and management	73,719.41
Interest on bonds . \$54,525.00	\$66,349.70
Interest on gold notes	186.53
Interest on current liabilities	3,712.02
	\$58,423.55
Head office and legal expenses	\$1,426.92
Bad debts written off	246.42
Expenses and discount on note issue written off ..	2,533.76
	4,207.10
	62,630.65

Motor Car, Lake Erie and Northern Railway.

reverse lever is mechanically interlocked with the operating handle, so that it cannot be thrown unless the main drum is in the off position. The equipment also includes Westinghouse air brakes, which can also be operated by hand; air signal; foot gongs; two air whistles, and a locomotive bell with air ringer.

The locomotives are arranged for double end operation and have central cabs with sloping hoods at either end. The cab is of steel and is lined with wood. Steps and handholds are arranged to conform to the Board of Railway Commissioners' requirements. The two locomotives are very similar. One, however, is arranged for a speed of from 20 to 25 miles an hour, and the other for from 30 to 35 miles an hour, with normal load, on a straight, level track. The high speed locomotive, which is intended for passenger, excursion traffic, is equipped with regenerative braking, controlled by the same master controller that operates the unit switch control outfits. When used for regenerative braking the motor fields are separately excited by a motor generator set, which also drives the blower for ventilation. This system is so arranged by means of relays that as soon as the voltage of the motor is equivalent to the voltage on the line the switch group automatically comes in on the line and throws the motors directly on the line, generating back to the power system, or utilizes the power on the line

the adoption of the standard system of accounting approved by the National Electric Light Association, inter-company charges, that is to say bookkeeping entries, between the company and its subsidiary companies have been eliminated. This makes an apparent reduction in both gross receipts and operating expenses, but it will be noted that the net receipts show an increase notwithstanding the fact that conditions in the early part of the fiscal year were not satisfactory.

The acquisition of the lighting and power businesses of Waterville and Compton, combined with the increased demand for power in the second half of the year, have created a market in excess of the capacity of the company's hydro electric development on the Magog River. To provide for this increased demand for power and the probable requirements in the immediate future, your directors deemed it advisable to make a contract through the Southern Canada Co., Ltd., for the purchase of sufficient power to cover same and this should be available in October. A considerable quantity of this power has already been contracted for. An extension of the power house and some of the transmission and distributing systems has been rendered necessary to handle this additional power and this work is now nearing completion and should materially increase the earning power of the company for the current

At credit of profit and loss, June 30, 1915	\$3,719.05
	1,181.32

Balance carried forward to credit of profit and loss	\$4,900.37
--	------------

The gross earnings for the year ending June 30, 1915, were \$55,920.74.

Saskatoon Municipal Ry. Earnings.

Following are the earnings, etc., for August:—

Total revenue	\$15,526.13
Operating expenses	9,719.12
Net revenue	5,807.01
Capital charges	4,504.22
Net profit	1,302.79
Total mileage	64,386
Passengers carried	299,348
Receipts per car mile	23.569c
Operating expenses, per car mile	15.072
Capital charges per car mile	6.985c
Total k.w.h.	136,700
Passengers per car mile	4.642

We are officially advised in connection with recent press reports that the Winnipeg Electric Ry. was about to take action against the City of Winnipeg for permitting the operation of jitneys in the city to the damage of the company's interest, that while the matter had been under discussion no definite action has been decided upon. The company claims that the franchise granted it by the city is an exclusive one, and that the licensing of jitneys is a direct breach.

Answers to Questions on Electric Railway Topics.

Following are answers to some questions sent to the American Electric Railway Association's question box, contributed by W. G. Murrin, General Superintendent, British Columbia Electric Ry., Vancouver:—

Automobiles for Official Use.—Will member companies which operate a large number of automobiles for the use of their general officers, roadmasters, line-men and other employes, let us know what cost and performance records they keep; form of daily report, form of monthly report, form of summary for presentation to general and operating officers, what is shown, and how often made?

A daily report of car troubles is made by the garage foreman to the General Superintendent. The foreman retains one copy, and in addition to forwarding a copy to the General Superintendent, a third copy is sent to the Master Mechanic. A daily report of cars requiring special attention, such as general overhauling, worn parts, etc., is also made by the garage foreman to the General Superintendent. Weekly odometer readings and tire changes are reported, and this information is transferred to a ledger, which furnishes at a glance the mileage and tire history of a car. A tire and casing record, showing the date installed, the car number, where carried, date changed, reason for changing, reading and the number of miles, is used in conjunction with the ledger. A card record is kept of individual car maintenance costs, the information being furnished by the accountant. Monthly statements are made to the General Superintendent and the Accounting Department, showing,—mileage of all cars, distribution of power charges for batteries of electric vehicles, distribution of power charges for lighting and starting batteries on all vehicles.

Street Sprinkler Cars.—Have any member companies constructed in their own shops, or had constructed in outside shops under their own specifications, street sprinkler cars, if so, please describe in a general way, this equipment and its practicability?

In 1905 we constructed in our shops a 3,000 gal. capacity single truck sprinkler, consisting of an old 6x16 ft. return tube boiler with the tubes removed, mounted on a timber platform 26 ft. over bumpers by 7 ft. wide. Canopy hoods on pipe standards were built at each end. The trucks were built with each side frame made of two 1x3 in. bars forged around and over the journal boxes, and two over-truss rods of ½x3 in. iron, the space-blocks having bearings for six coil springs, on each side frame, which carried the car. The wheel base is 7½ ft. with standard 3¼x7 in. freight car journal boxes. The car is mounted on 33 in. rolled steel interurban wheels, with 5 in. axles carrying two G.E. 57 motors and is equipped with straight air brakes, 8x10 in. cylinder. Water is pumped from the tank to sprinkler heads at either end by a 4 in. centrifugal pump, belted to a 10 h.p. motor, and 250 ft. roadway can be easily sprinkled in one trip. The cost of this car is about \$2,800 complete.

Inspection of Hand Brake Equipment.—What methods of inspection have member companies adopted to keep in good order hand brake equipment on cars upon which air brakes are ordinarily used? Is the hand brake equipment overhauled at

regular intervals or is this left to the judgment of the car house foreman?

When air brakes are used it is a particularly difficult matter to enforce the use of hand brakes frequently enough to keep them from becoming stiff or clogged up, especially so at the floor bearings on the platform. We inspect hand brakes on city equipment at every periodical inspection or after every 90 car hours, and on interurban equipments after every 1,000 car miles. Transportation rules require on city lines that hand brakes must be tried out before car is taken out of the barn, and at least one stop with hand brakes made during each shift, at some suitable place on the route. Interurban crews must test hand brakes on taking over car at the barn, and operate car with hand brakes only, between barn and terminal station when taking it to and from service.

Regina Municipal Railway Earnings

Following are earnings, expenses, etc., for August, and for eight months ended Aug. 31:—

	August	Jan. 1 to Aug. 31
Gross earnings	\$14,679.13	\$137,327.56
Expenses	13,600.87	127,836.61
Net earnings	1,078.26	9,490.95
Capital charges	8,022.96	64,183.69
Deficit	6,944.70	54,692.74
Expenses per car mile		
without power	12.76c	16.09c
Expenses per car mile		
with power	17.02c	21.45c
Power per k.w.h.	1.41	1.83
Power per k.w.h. per car mile	4.25	5.16
Platform wages per car hour	70.41	72.46
Passengers carried	323,225	3,040,080
Expenses percentage, without capital charges. . . .		92.65%
Expenses percentage, with capital charges		147.31%

Quebec Railway, Light and Power Co's Accident Talks, Etc.

The Quebec Ry. Light and Power Co. has, since the end of 1914, been issuing "Accident Talks" for the benefit of its employes and the general public. The first of these was issued Nov. 1914, the first series consisting of five talks. The 1st asks the public to help the company to avoid accidents, and shows how they may do so; the 2nd shows how they may help the company and the travelling public when an accident happens; the 3rd contains suggestions to drivers of automobiles and other vehicles; the 4th relates to suits for damages, urging the public to come direct to the company with claims for compensation; and the 5th invites cooperation in the teaching of children in accident prevention. The second series of accident talks—10 in number—were issued bi-monthly between Nov. 1915, and Mar. 1916. The 1st is addressed to motormen; the 2nd refers to those who witness accidents, asking them to give the company all the facts; the 3rd points out that 90 per cent. of all accidents are brought about by carelessness, and urges carefulness and caution; the 4th calls attention to danger signals and their use; the 5th enforces the lesson "Wait till the car stops"; the 6th shows some of the ways in which accidents occur; the 7th is a talk on safety; the 8th "Don'ts" to be observed by parents and taught to their children; the 9th is addressed to drivers of autos and to parents, and the 10th is an appeal for cooperation.

In June and July of this year two leaflets, addressed to the company's employes were issued—the 1st dealing with

service and the 2nd with courtesy. They are all clear and concise, and full of fact and suggestion, and are printed in both English and French.

Brandon Municipal Railway Operating Results.

Following is a comparative statement for the year ended June 30, 1916 and 1915:—

Passenger earnings	\$28,590.05	\$35,321.64
Miscellaneous earnings	668.63	647.41
Gross earnings from operation	29,258.68	35,969.05
Total operating expenses . . .	28,660.23	28,394.87
Net income	\$598.45	\$7,574.18
Interest on funded debt	20,100.00	19,300.00
Interest on floating debt	25	267.34
Sinking fund	5,968.08	5,968.08
Depreciation	6,484.41	6,177.51
	32,552.74	31,912.93
Less net income	598.45	7,574.18
Net loss	\$31,954.29	\$24,339.75

Fare passengers carried	627,739	782,011
Average fare revenue passengers, in cents	4.52	4.52
Gross earnings per car mile . . .	12.43	13.33
Operating expenses per car mile	12.18	10.53

The increased net loss of 1916 over that of 1915 is due to the closing of the railway system for 10 weeks, during the excessively heavy snowfall last winter. Not only was the revenue nil during that period, but the city council decided that the motormen, conductors and car barn employes should be given employment for the whole of the time the system was closed.

Ontario Hydro Electric Railways.

Twenty-five Ontario municipalities will on New Year's Day vote on bylaws for a hydro radial electric railway to run between Port Credit, St. Catharines and Bridgeburg. Under an act of last session, it is necessary for the sanction of the Lieutenant-Governor in Council to be secured three months prior to the date of the vote so that the people can become cognizant of the matter on which the poll is being taken. The estimated length of the road is 100 miles, and its cost about \$40,000 a mile, or a total cost of about \$4,000,000. The order in council was passed at the request of the Hydro Electric Power Commission, following the recent meeting in Hamilton, where the delegates made a strong demand that preliminary work on the line be started. The route is through a rich section of agricultural country, and the line will touch the following places:—Townships: Toronto, Trafalgar, Nelson, East and West Flamborough, Barton, Saltfleet, North Grimsby, Clinton, Louth, Grantham, Crowland, Humberstone and Bertie. Villages: Grimsby, Beamsville, Port Colborne, Humberstone, Fort Erie. Towns: Oakville, Burlington, Welland and Bridgeburg. Cities: St. Catharines and Hamilton. The radial from Toronto would connect with the line at Port Credit.

Edmonton Municipal Railway Deficit.

For the first 7 months of 1916 the deficit on operation, including depreciation and capital charges, was \$63,010.78, against \$75,136.90 for the first 7 months of 1915, a betterment in results of \$12,126.12, which A. G. Harrison, City Commissioner, points out was in spite of the fact that the city decreased in population and that five battalions of her soldiers were in camp at Calgary and elsewhere during the summer.

Electric Railway Projects, Construction, Betterments, Etc.

Berlin & Northern Ry.—The Board of Railway Commissioners has approved of plans showing a change in the location of the company's crossing on Wellington St., to the south side of Louisa St., Kitchener, Ont., the work to be done at the company's expense. (Dec., 1913, pg. 592.)

Brantford & Hamilton Ry.—The Board of Railway Commissioners has authorized the company to rebuild its bridge across the Toronto, Hamilton & Buffalo Ry. at Cainsville, Ont. (May, 1915, pg. 190.)

The Board of Railway Commissioners has authorized the company to establish its Brantford passenger station in the Lake Erie and Northern Ry. station at Lorne Bridge, Brantford, Ont., subject to agreement with, and the consent of, the city to the building of an extension of its tracks from Market St. to the station.

British Columbia Electric Ry.—The Vancouver City Council decided Oct. 6 to ask the company to continue the double track line on Hastings St., to Boundary Ave.

A settlement was effected Oct. 5, between the company and the Silver Spring Brewery, Victoria, of the matters about which they have had a difference, and which reached the law courts. The company sought to secure payment for power supplied to the brewery, and the brewery set up in defence a 20 year old understanding that it was to receive power free, in consideration of the company having built part of its line on brewery property. The brewery company is to pay a sum for power, and the railway company is to give a strip of land 31 ft. wide for the operation of a double track street railway, and it will have the absolute right to operate trams upon this at all time. The settlement gives the brewery company, by moving its tracks out from their present position close to the wall of the building, a means of access and sufficient clearance to the shipping doors, with an easement across the tracks to this roadway and another clearance from the brewery to the office. (Oct., pg. 425.)

Edmonton Radial Ry.—A press report states that the Edmonton, Alta., City Council is preparing a bylaw to provide for raising of \$75,000 for street railway purposes. (Sept., pg. 378.)

Fort William Electric Ry.—The Fort William, Ont., City Council has under consideration a proposal to build subways at the west end of the city, in order to carry highways along which the street railway runs across 14 sets of tracks belonging to the C.P.R., the Canadian Northern Ry. and the Canadian Government Railways (Lake Superior Branch). The council favors the building of one subway on Yonge St., as a start, at an estimated cost of \$250,000. Plans for this are being prepared by the City Engineer.

Lake Erie & Northern Ry.—The Board of Railway Commissioners is being asked to approve of an agreement between the Brantford City Council and the company for the sale by the city to the company of a portion of the Grand Valley Ry., and the board has approved of the revised location of the company's line in Brantford from station 0-26.1 to 3.13.8.

The Mayor of Brantford has written M. N. Todd, General Manager, L.E. & N.R., asking the company to provide protection for the public at Holmedale crossing. (Oct., pg. 425.)

London & Port Stanley Ry.—The London City Council has agreed to provide a further sum of \$117,000 to make certain improvements on the line, including the building of about 12 miles of second track and providing a grain elevator at Port Stanley. (Oct., pg. 425.)

The London St. Ry., we are officially advised, is just completing the building of a second track on a 2,000 ft. section of Dundas St., west of the fair grounds, at London, Ont. It is expected at an early date to extend the Hamilton Road line from the present terminus at Egerton St. for 2,200 ft. to West St. (Sept., pg. 378.)

Montreal & Southern Counties Ry.—We are officially advised that the contract for the erection of a car barn at Granby, Que., which was let to the Nicholson Construction, Limited, is expected to be completed early in November. (Aug., pg. 378.)

Montreal Tramways Co.—The Board of Control is spending considerable time discussing the terms of a new franchise to be offered the company. At the rate the discussion is going on at present it will be some time before the terms are settled. The question of the employment of expert help in settling the terms is the subject of considerable discussion. The Board of Trade has appointed a committee to discuss the matter so as to be in a position to approach the City Council when the draft franchise comes before it. (Oct., pg. 422.)

Morrisburg & Ottawa Ry.—The following advertisement was published in Ottawa papers recently: "The Secretary-Treasurer of the above company will be at his office, 210-211 Union Bank Building, Ottawa, from 10 a.m. until 4 p.m. every day until Oct. 4, 1916, to receive payments or to make settlements with shareholders in arrears, and that (excepting such shareholders as against whom this company has judgment, or suits pending, or who have given promissory notes, or who have voluntarily made other satisfactory settlement) all shares other than as specified above upon which any call or part of call or other amount remains unpaid, on our books as of date Oct. 14, 1916, may be forfeited to the company, that such forfeited shares will be disposed of by the directors in such manner and at such times as may be deemed advisable and in accordance with the Statute of Ontario governing such sale of forfeited shares; and further take notice—That the Secretary-Treasurer of this company is the only authorized person to give receipts for money paid to the credit of this company and shareholders and others will govern themselves accordingly."

This company failed in securing from the Ontario Legislature last session an extension of time for construction. The company did some grading, but could not get further funds. In May, 1915, it began to take proceedings against its shareholders to recover unpaid instalments of calls and secured judgment against a considerable number of them. (June 1915, pg. 227.)

The Porcupine Rand Belt Electric Ry. Co. was incorporated by the Ontario Legislature in 1912 to build certain lines to be operated by electricity, and to connect with the Timiskaming and Northern Ontario Ry. at Dane, Ont. The company's organization was reported completed in Nov. 1912, and surveys were said to have

been completed by C. R. Fullerton, Liskeard, for some of the lines. Nothing further was heard of the project until Oct. 1913, when an unsuccessful application was made to the Ontario Government for a subsidy for building an electric railway from Haileybury to Lake Abitibi. A special general meeting of shareholders was called to be held in Toronto Oct. 16, to elect directors, to terminate a contract with the Porcupine Construction Co., to build two branch lines from Boston Creek to Swastika, and from the T. & N. O. R. via Larder Lake; and for other purposes. The secretary-treasurer of the company is W. J. James, Allandale, Ont., and the other officers and directors include several Toronto City Hall officials. (Nov. 1913, pg. 544.)

Quebec Ry., Light & Power Co.—The portions of this company's lines which are to be taken over by the Dominion Government, under the provisions of an act passed last session, have not yet, we are officially advised, been transferred, but are still being operated by the company, but on behalf of the Government.

We are further advised that the company has now under construction about 1.50 miles of new track in St. Malo and Linoilon wards, Quebec, and that it proposes to lay about 4 miles of city and suburban lines during 1917.

The company is adding a 2,000 h.p. motor generator to its equipment, from Canadian Westinghouse Co.

The St. John, N.B., Ry. is building a brick and concrete pumping station and doing some dredging in connection therewith at St. John, N.B. H. M. Hopper is General Manager, and G. G. Murdoch, Engineer.

Toronto Civic Ry.—We are officially advised that the 9-car addition to the St. Clair Ave. car barn is under construction and is expected to be completed at an early date. (Oct., pg. 425.)

Toronto Ry.—The gap between the Toronto Ry.'s northern terminus on Yonge St., just south of the new subway under the C.P.R., and the Toronto & York Radial Ry. Metropolitan Division's southern terminus on Yonge St., between Farnham and Woodlawn Avenues, the greater portion of which was caused by the city tearing up the T. & Y. R. Ry. track south of that point, on the expiration of its franchise some two years ago, has been closed up by the extension of the Toronto Ry. north to the point mentioned. Following the British Privy Council's judgment in favor of the company, the city did the paving and the company laid the ties and rails and did the overhead work. Through service was started Oct. 4, but after a few days was superseded for 3 days by a stub service north of the subway, pending some alterations in the overhead work in the subway. The Toronto Ry. cars run into a Y at Woodlawn Ave. and then back up Yonge St. to the T. & Y. R. Ry. terminus. (Oct. pg. 425.)

The North Toronto Ratepayers' Association, on Oct. 21, passed a resolution calling for the expropriation of the Toronto & York Radial Ry., Metropolitan Division. The question of the future of this division is at present a matter of negotiation between the company and the Hydro Electric Power Commission of Ontario, at the request of the City of Toronto, the city council desiring to purchase it.

The Toronto and York Radial Railway's Deviation to its North Toronto Station.

The judicial committee of the Imperial Privy Council has allowed the Toronto & York Radial Ry. Co.'s appeal from the decision of the Ontario Appellate Court, relating to the proposed deviation of the company's tracks from Yonge St. to its proposed new station off Yonge St., between Farnham and Woodlawn Aves. This matter has been bandied about for several years, in fact, ever since the question of the separation of steam railway grades at North Toronto was mooted, and which latter is now an accomplished fact.

On June 17, 1912, the Ontario Railway and Municipal Board authorized the Metropolitan Ry. (owned by the T. & Y.R.R.) to deviate its line from Yonge St. to a private right of way from Farnham Ave. to a proposed new terminal 800 ft. west and north of the C.P.R. This location showed the crossing of several streets on the level, and the speed of cars crossing them was limited to six miles an hour. The board held that it was not reasonable to compel the company with its earnings to spend \$500,000 on grade separation, more especially as the municipalities refused to contribute anything. The City of Toronto appealed against the order in Feb., 1913, and the Ontario Court of Appeal decided in favor of the city. The company then appealed to the Privy Council, and its appeal was dismissed in Nov., 1913. The company then applied to the Ontario Railway and Municipal Board for authority to deviate from Yonge St. to a proposed new terminal at Farnham Ave., and this authority was granted. The city appealed against the board's order, and the Ontario Court of Appeal decided in favor of the city. The company immediately gave notice of appeal to the Privy Council, and this has resulted in the present decision in favor of the company.

A cable dispatch from London, summarizing the judgment, states:—

"The appellants for the purpose of operating the railway have the franchise which they claim in respect of the street and adjoining the lands proposed to be used, and the committee of the Privy Council determines in their favor the question on which Judge Garrow preferred not to give a final opinion.

"On the second point, concerning the obtaining of the consent of the city council before the Ontario Railway and Municipal Board could approve the plans, the judgment says it is clear that before construction is commenced the plans setting forth the proposed location of the tracks must be approved by the committee appointed by the city council, and the location cannot subsequently be altered without the consent of the committee. There is further protection that the line shall not be put in operation upon any section until the City Engineer has certified such section has been constructed in compliance with the terms of the agreement. It must be assumed that all these conditions were fulfilled before the line was put in operation.

"In the present case the board before approving the plans of the appellants took care to ascertain whether they were satisfactory on engineering grounds to the city. They considered the objection of the city on engineering grounds, procured a report thereon of their own engineer,

and before approval amended the appellants' plans to conform with the objections made on behalf of the city. In effect, there was no difference on engineering grounds between the city and the appellants when the board finally approved the plans for carrying the spur line on the level across the sideway on the west side of Yonge St. In the event of any difference arising between the city and the appellants as to any matter to be done under the terms of the agreement, the agreement contains an ample arbitration section. Their Lordships are of the opinion appellants succeed, with costs here and in the court below."

Sandwich, Windsor and Amherstburg Ry. Employes Wages.

S.W. & A.R. conductors and motormen, who have been agitating for an increase of wages, applied recently for a board of investigation and conciliation under the Industrial Disputes Act. They named Magnus Sinclair, of Toronto, as their arbitrator. The company named E. G. Henderson, of the Windsor Salt Co., as its arbitrator, and the Minister of Labor appointed the County Judge of Essex County as the third arbitrator and Chairman. The present wages per hour are, 1st six months, 25c; 2nd six months, 26c; 2nd year, 27c; after 2nd year, 28c. The men asked increases as follows: 1st six months, 27½c; next six months, 32½c; thereafter, 35c.

The men's demands were made in the form of a draft agreement submitted to the company, which is summarized as follows: The agreement to be between the Sandwich, Windsor & Amherstburg Ry. and the Windsor & Tecumseh Ry. Companies and the Amalgamated Association of Street & Electric Railway Employes of America, Division 616. All business arising between the companies and the association to be transacted directly between the companies' officers and the association's officers and committee. All the companies' employes to become members of the association within 30 days from the signing of the agreement and all employes entering the companies' service to become members within 30 days from date of entering the service. The day's work for all motormen and conductors to be from 9 to 10 hours, to be completed within 12 consecutive hours. The runs to be divided as nearly equal as possible between two crews, to be known as early and late runs. Wages of motormen and conductors per hour to be as follows: 1st 6 months service, 27½c; next 12 months, 32½c; thereafter, 35c. Where an employe is suspended or discharged, and after an investigation it is proved that there was not sufficient cause for suspension or discharge, he shall be reinstated in his former position and paid for all time lost at same rate as if he had been working on the car. If any difference arises between the companies and the association that cannot be amicably adjusted between them, it shall be submitted to three arbitrators, one selected by the companies, one by the association and the third by the first two named, the finding by a majority of the arbitrators to be final and binding upon both parties. All cars to be cleaned, oiled and put in good condition by barn men, relieving conductors and motormen from such duty. All cars to be equipped with good power brakes, automatic fenders and modern improved sanders. All conductors and motormen to be supplied by companies with one sum-

mer uniform yearly, consisting of hat, coat, waistcoat and trousers, and winter uniform of cap, overcoat and trousers. Extra conductors and motormen to be guaranteed 5 hours each day, whether they work or not, provided they are ready for duty and report at the companies' offices each day for work. The agreement to be in force for one year from signing.

The board commenced its sittings Oct. 21, but no decision had been reached at the time of writing, Oct. 25.

Shareholders Suit Against Dominion Power and Transmission Co.

The action of C. W. Moodie, Hamilton, Ont., against W. C. Hawkins, Vice President and Managing Director, and other directors of the Dominion Power & Transmission Co., asking for the appointment of a receiver and an adjustment of the company's affairs, came before Mr. Justice Middleton at a special sitting of the Supreme Court of Ontario at Hamilton, Oct. 3. After the case had been before the court for three days a settlement was arrived at, the terms of which were not made public, but it is said they include the taking over by the President of the D. P. & T. Co. of all C. W. Moodie's interests in the company, for which the Hamilton Spectator says he is to receive \$185,770.

The statement of claim set out that C. W. Moodie held 1,290 shares of preferred stock and 2,211 shares of limited preferred stock in the D. P. & T. Co. The plaintiff alleged that since the incorporation of the company, its official representatives have secured large financial interests in auxiliary companies through the fraudulent use of money belonging to the shareholders of the D. P. & T. Co., and that because of the securing of these side interests at an excessive cost, the directors of the company have suffered great loss. The plaintiff asked for the appointment of a receiver and the adjustment of his financial interests in the company.

An action similar in many respects to this was taken against the D. P. & T. Co. some months ago by John Moodie, of Hamilton, who claimed that the company owed him about \$7,000 on back dividends. After a lengthy trial the action was dismissed.

Municipal Electric Railways Operations in Western Canada.

The Saskatoon, Sask. Phoenix says:— "The Brandon Municipal St. Ry. has proved an expensive luxury, and, it is estimated by the civic authorities, has cost the city approximately \$50,000 this year, an average monthly loss of about \$4,000. The street railway of Regina municipality has cost that city \$40,000 to operate so far this year. The Lethbridge Municipal Ry. has cost approximately \$8,000. In practically every city in Western Canada the municipal street railways are proving themselves to be merely sink holes for public funds.

"The street railway system in Saskatoon, which at one time was regarded as a losing proposition, has so far this year shown a profit of \$7,000. Part of the profit is undoubtedly due to the profitable operation of the exhibition route during part of last winter when the military were stationed at the grounds, but apart from that, the local street railway is a paying concern. Editorials appear in

the daily papers of some of the western cities that are paying through the nose for their street car service, and one of them, at least, has a very hopeless tone. It speaks as though it were impossible to make that particular street car system pay. Saskatoon went through a similar process of reasoning, but the council became determined that the street car system must be made to pay and instructed the street railway superintendent to that effect. The kicks of particular sections of the city that wanted a street car service entirely out of proportion to the amount of traffic carried were disregarded to a great extent and the system was run on business-like lines. It has been a success ever since. The use of the expensive, power-hungry double truck cars was discontinued in a great measure, and the routes were somewhat reorganized by competent people. The result has been that the present car service here is on time, efficient and paying."

Mainly About Electric Railway People.

W. E. Skead has been appointed City Purchasing Agent, Brandon, Man., and will make purchases for the Brandon Municipal Ry.

Redmond Quain, Director, Ottawa Traction Co., Ottawa Electric Ry. Co., and Ottawa Car Manufacturing Co., died at Ottawa, Oct. 5, aged 56.

C. F. Waugh, has been appointed Agent, Chatham, Wallaceburg and Lake Erie Ry., Chatham, Ont., vice R. M. Dunlop, resigned to enter G.T.R. service.

W. C. Hawkins, Vice President and Managing Director, Dominion Power & Transmission Co., Hamilton, Ont., has been elected a Director of the Southern Canada Power Co.

The Public Utilities Commission of Port Arthur, Ont., which operates the Port Arthur Civic Ry., has advanced the salary of the Manager, M. M. Inglis, from \$150 to \$175 a month.

W. T. Woodroffe, formerly Superintendent, Edmonton Municipal Ry., who went overseas some time ago in the Canadian Expeditionary Force, is reported to have been killed in action.

Geo. Kidd, General Manager, British Columbia Electric Ry., returned to Vancouver recently after a three months official trip to England, and was given a general welcome by the staff at a reception.

B. Greenway, General Foreman, Regina Municipal Railway, is now looking after both track and overhead work. T. McGuinness, Overhead Foreman, having enlisted, that position has been abolished.

C. H. Ritchie, K.C., who died at Toronto, Oct. 3, aged 65; was one of the arbitrators engaged in the settlement of the dispute between the City of Toronto and the street railway company, regarding the amount to be paid by the city in taking over the system, prior to the formation of the present Toronto Ry. Co.

E. L. Cousins, A. M. Can. Soc. C. E., General Manager, Toronto Harbor Commission, has declined to act for the Montreal City Council in reference to the street railway problem there on account of the extra demands on his time caused by the large number of the commission's staff who have gone into the Canadian Expeditionary Forces.

Thomas Penney, a former President, and for a number of years General Counsel, International Ry., Buffalo, N.Y., which company operates the Niagara Falls Park & River Ry. in Canada, has been appointed a Vice President, in addition to the present Vice President, E. J. Dickson. He resigned as President in Jan., 1913, but continued as a director. He was born in London, Eng., and went to the United States as a boy.

Three Rivers Traction Co's Lines and Equipment.

The Three Rivers Traction Co.'s Cap de la Madeleine extension which will serve the populous district across the St. Maurice River from the City of Three Rivers, Que., is expected to be in operation in November if sufficient men can be obtained to complete the ballasting. The terminus will be near the Union Bay Co.'s large new paper and pulp plant and the

C. L. Wilson
Assistant Manager, Toronto & York Radial Ry.,
and Vice President, Canadian Electric Railway
Association.

Cap de la Madeleine Parish Church's pilgrimage grounds.

With the opening of the new branch the company's total track mileage, including the Wayagamack Branch, will be 42 miles—comprising 7,500 ft. of 60 lb. rail track, and 14,750 ft. of 75 lb. rail track. All special work is of flange bearing manganese construction. The overhead construction is the usual cross span, direct suspension system with 000 trolley and aluminum feeders. 4/0 gas-weld bonds are used throughout.

The car storage shed has been increased by 4,500 sq. ft. to accommodate new equipment and additional stores facilities required.

The new equipment ordered for the extension service comprises two of the company's standard prepayment rear-side, radiax truck cars operated entirely by one man. A third standard car has been purchased, differing only in that a duplicate control equipment has been placed in the rear end to facilitate reverse direction running in shuttle service. These

three cars are equipped with K control for two Westinghouse 101-B2 motors, together with s.m.e. air brake.

A snow plough with steel nose operated pneumatically and with a large wing for street cleaning has been ordered to handle the usual drifts on the new branch. In other service this car may be used for package freight or switching. It will be equipped with four Westinghouse 101-B motors and h.m.m. brake equipment.

At two steam railway crossings derail protection, with signal light has been provided.

The commission in charge of the building of the Toronto-Hamilton highway is said to be considering the operation of a motor bus traffic on the road.

London and Port Stanley Railway Operations, Equipment, Etc.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, and London Railway Commission, attended a meeting of the London, Ont., City Council, Oct. 16, and is reported to have said that the city's auditor had been at work for some time on the L. & P. S. R. accounts. He was in a position to read a statement of the finances of the road which the auditor will no doubt verify. It shows that operating expenses for the first year were \$100,197.48. Taxes, interest, sinking fund and rental to the city reduced this by \$76,542.72, leaving a net income from operation of \$23,672.76. A donation of \$1,300 was made to the British Red Cross, and sinking fund that accrued on debentures during the six months construction period before a wheel was turned or a dollar earned amounted to \$5,439.58. The actual net surplus in the hands of the commissioners at the termination of their first year was, accordingly, \$18,233.18. The commissioners now have on hand over \$50,000, about \$32,000 representing the surplus earnings over operation since July. This will enable the commissioners to meet the expenditure on the bathhouse at Port Stanley and other improvements, and will reduce the amount for which it is proposed to issue debentures.

The London City Council had before it recently bylaws to provide for the expenditure of \$75,000 for building two steel motor and three trailer cars for the line, and of \$42,000 for second track work, a bathing house at Port Stanley found necessary to provide further office accommodation and the latter bylaw was amended by the addition of \$8,000 to the amount authorized to be expended upon improvements, making a total of \$125,000. The original bylaw was to authorize the council to raise this amount by the issue of debentures, but after Sir Adam Beck's statement above referred to, the bylaw was amended to authorize the council to issue debentures for such an amount of the whole expenditure of \$125,000 as the commissioners may not be in a position to meet out of surplus earnings.

The London City Council on Oct. 2, on the Board of Control's recommendation, and at the request of the London Railway Commission, authorized application to the Ontario Railway and Municipal Board for permission to issue debentures for \$75,000 for the purpose of purchasing two steel motor and three trailer cars.

On behalf of the London Railway Commission, the Hydro Electric Power Commission of Ontario has prepared plans and specifications for 3 additional all steel motor cars for the L. & P. S. R., and is receiving tenders for them, to Nov. 2. It is intended to have the cars delivered in April, 1917. The cars will, in the main, be similar to those already in operation on the line, and which were illustrated and described in Canadian Railway and Marine World for Jan. 1915. They will, however, be 10 ft. 7 ins. longer, and will have a number of improvements, all making for the increased comfort of the passengers. Among the improvements will be larger and more convenient lavatories, large water cooler with sanitary drinking cups, rubber tiling for flooring of lavatories, rubber matting over trapdoors, heavier fittings generally throughout the car, sliding doors leading from platform to main car body,

spring buffers at each end of car, steps at both ends of car, larger doors of the sliding type over steps leading into the baggage compartment, two collapsible seats in the baggage compartment for additional seating capacity for passengers not carrying baggage, and a trainman's locker in the baggage compartment opposite the switchboard cabinet. There are also a few changes in the design, tending toward simplification of construction, lowering maintenance cost, and general efficiency. The cars will be divided into three compartments, main, smoking and baggage. Following are the chief dimensions:—

Length overall	71 ft. 7 ins.
Width over sheathing	9 ft. 6 ins.
Height from rail to top of roof	13 ft. 6 1/4 ins.
Total seating capacity	68
Total weight, including all equipment.	104,720 lbs.

Toronto Suburban Railway.

Some little work is being done on the extension of the line from Lambton to Guelph, but it is being done slowly and with a small staff. It is unlikely that the line will be opened for traffic this year, but if it were opened, the cars on the extension would only run from Lambton, as it is not probable that the change in gauge in the line from Keele St., Toronto, to Lambton, will be made during the winter. There is a general impression that a change of ownership is pending, and that possibly the line will be taken over by the Hydro Electric Power Commission of Ontario, on behalf of the municipalities interested.

The Ontario Railway and Municipal Board on Oct. 12 considered the company's plans for an extension of its line from its present easterly terminus at or near Bathurst St., easterly along Davenport Road. It had already been agreed by the parties that the route plan and profile easterly to the north limit of Bridgeman Ave. were unobjectionable, and the Board had decided to issue an order in respect thereof, but the plans in respect of the proposed track easterly from the north limit of Bridgeman Ave. had been by agreement left for further consideration. The plan of cross section filed is objected to on several grounds by the city, chiefly on account of the proposed method of construction. The company's plans showed the tracks laid in broken stone ballast throughout the entire length, and the type of rail used, as 60 lb. T rail. The city contended that the tracks throughout the entire length must be laid on a concrete base 15 in. thick, and with 90 lb. girder rail. The Board's engineer was instructed to report on the proposed work, and advised that regarding the work along the portion of Davenport Road which is macadam, that is from Bathurst St. to Kendal Ave., and from the east side of Huron St., to the north side of Bridgeman Ave. the track be laid in stone ballast on a well rolled subgrade, the ballast to be 6 in. thick under the ties and thoroughly tamped; the rails to be of the ordinary T section, 70 lbs. a yard, ties to have at least 6 ins. of bearing surface and spaced 2 ft. centres; space between rails and for 18 ins. outside each outer rail to be filled with macadam. In the event of any portion of this section being paved in the future it would be advisable to take this ballasted track up and replace it with deep rails and concrete base. For that portion of Davenport Road between Kendal Ave. and the west side of Huron St., which is now paved with asphalt block, standard concrete base 15 ins. thick, and

there is no reason why the deep 7 in. T rail, 90 lbs. a yard, should not be used, as it would conform to the ordinary T rail construction on either side, but objection may be raised to the rail.

It was urged by the city that in anticipation of the part of Davenport Road now laid in macadam being paved at a future time, the standard of track construction recommended by the engineer, for the paved portion, be adopted for the macadamized portion as well. In view of the interpretation of the city's agreement with the company, the Board could not concede this contention, but orders that if a new plan of cross section conforming to the terms of the engineer's report is filed with the Board, it, with the location and profile now on file, will be approved. (Oct., pg. 425.)

Electric Railway Notes.

The Levis County Ry. is reported to be building 2 single truck cars, 32 ft. long, in its own shops at Levis, Que.

The Toronto City Board of Control has recommended that the minimum wages of conductors and motormen on the Toronto Civic Ry. be increased from 27 7/9c to 30c an hour.

The Women's Forum, of Vancouver, B.C., decided Oct. 14, to join with the Social Service Council in bringing before the city council certain information which had been gleaned with regard to the jitney traffic in relation to morals.

Winnipeg City Council cancelled about 50 jitney permits recently on account of complaints made by the morality department. The jitney men are making a test case to determine the city's right to cancel the licenses.

The British Columbia Electric Ry.'s technical school was resumed for the winter session, Oct. 4. The company bears the cost of the school and grants certificates to those who pass the examinations. Prizes are provided by G. Porter, Chief Electrical Engineer.

Among the Express Companies.

K. Copeman has been appointed route agent, Dominion Ex. Co., Winnipeg.

F. R. Lount has been appointed agent, Canadian Ex. Co., St. Thomas, Ont., vice V. J. Smith.

J. Bayley has been appointed route agent, Dominion Ex. Co., London, Ont., vice O. A. Sharp, transferred.

O. A. Sharp, heretofore route agent, Dominion Ex. Co., London, Ont., has been appointed acting agent there.

The Canadian Ex. Co. has extended its service over the Grand Trunk Pacific Ry., Biggar-Battleford, and Battleford-Cut Knife branches, and has opened offices at Battleford, Lawson and Riverhurst, Sask.

The Canadian Northern Ex. Co. has opened offices at East Selkirk and Oakland, Man.; Browning, Carmel, Chandler, Drapmore, Fairmount, Forgan, Hardy, Margo, Merritt, Ridpath and Sturgis, Sask., and Cardiff, Alta., and has closed its offices at Bates, Que., and Chaffey's Locks, Ont.

The Great North Western Telegraph Co. has opened offices at St. Ulric, Riviere Blanche, Que.; Drapmore, Oakland, Man.; Carmel, Dorgan, Hardy, Willowbrook, Sask.; and Cardiff, Alta., and has closed its offices at Pointe au Pic, Que.; Kingville, Royal Muskoka Hotel, Ont.; and Sangudo, Alta.

Marine Department

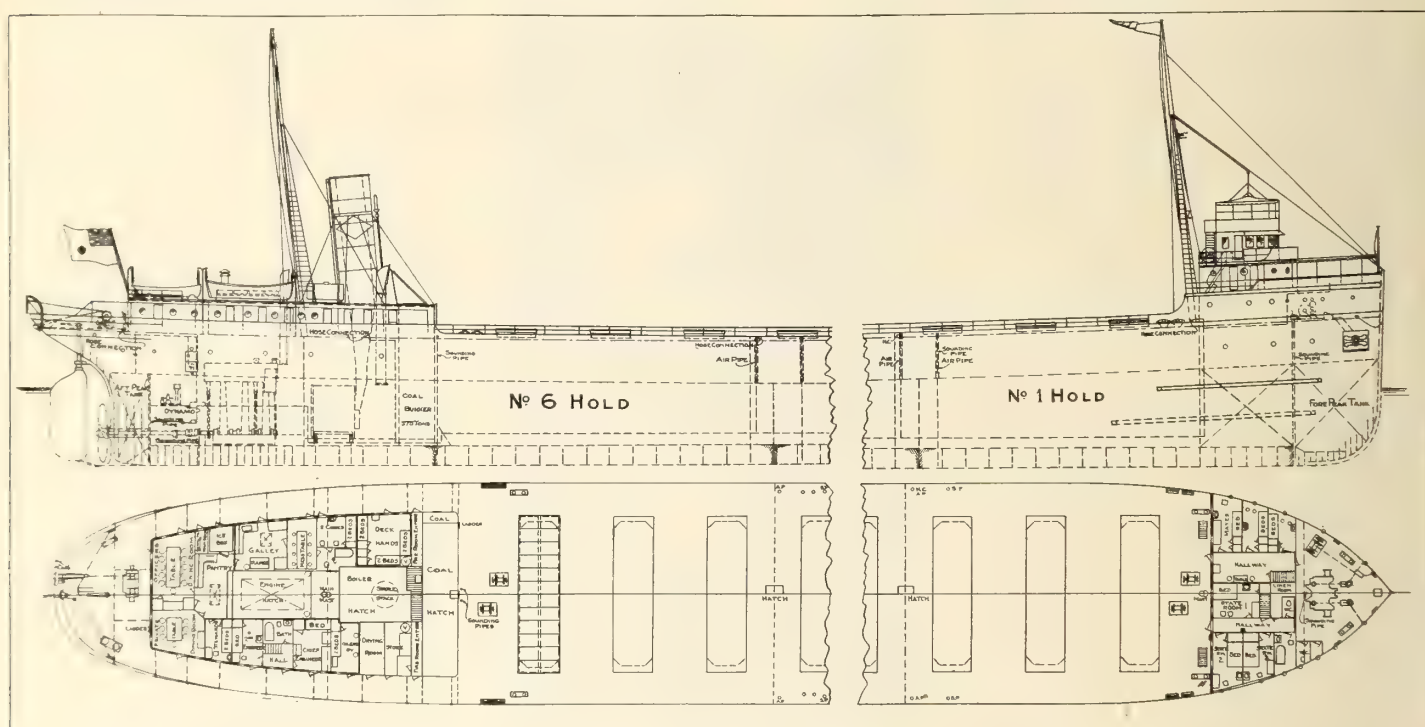

New Steamship for Montreal Transportation Company.

The steamship which is under construction at Collingwood, Ont., for the Montreal Transportation Co. is of the single deck type, which has been evolved to meet the requirements of the Great Lakes in regard to the transportation of coal, ore and grain. The leading dimensions are:—Length over all 550 ft. 8 in.; length between perpendiculars 537 ft.; breadth moulded 58 ft.; depth moulded 31 ft.; deadweight capacity, on 19½ ft. draught, 11,000 tons.

The vessel is of steel throughout, to the highest class for the Great Lakes Register, the weights of materials being, in many cases, in excess of the registration requirements. In common with other

sulted for mechanical unloading operations. The tank top plating, which carries the weight of the cargo, is supported by a centre girder and 4 longitudinal girders on each side of the centre line. Intercostal deep floor plates are fitted in the transverse direction on every second frame, that is, 6 ft. apart, there being a deep floor plate at each girder, and one between. There are two complete collision bulkheads forward, the space between these forming a deep tank. The cargo hold is divided by screen bulkheads into 6 compartments, and the double bottom by 4 watertight divisions into 5 compartments for water ballast. The remaining bulkheads are, a cross bunker

weight. The anchors are stowed in pockets so that they may not foul lock gates or other possible obstacles in navigating narrow waters. The main and emergency steering engines are situated right aft on the main deck. Both gears have 9x9 engines, and actuate the rudder directly through a toothed quadrant directly connected to the rudder. Both gears are controlled by a wire transmission led from the bridge, and a clutch arrangement is provided so that either gear can be put in and out of operation on short notice. Four winches are fitted for breasting the vessel, and one heavy winch is fitted aft to handle stern lines and a kedge anchor as necessary.

Plan and Profile of Montreal Transportation Co.'s New Vessel.

vessels of her class, she embodies many features to facilitate rapid loading and unloading, the short season on the lakes making quick dispatch in port a matter of the utmost importance. No loading or discharging appliances are provided on board, these operations being accomplished by appliances on shore. There are 16 cargo hatches, each 38 ft., by 9 ft. 4 in., spaced 24 ft. centre to centre. Between the hatchways strong arch girders extend right across the vessel, the adoption of which dispenses with the use of stanchions, and the holds are left unobstructed, a necessary feature where coal and ore cargoes are unloaded by clam shell buckets. The ordinary bottom and side transverse frames are of channel section spaced 3 ft. apart. The double bottom, 5 ft. deep, extends the full length of the vessel between the peak bulkheads. The side tanks are of the same width and extend on each side up to the level of the main deck stringer, thus forming a double skin well above the deep load line. The well tanks provide a large additional capacity for water ballast, while the centre plating transforms the hold into a compartment of hopper form, eminently

screen bulkhead, a screen bulkhead between the engines and boilers, and watertight afterpeak bulkhead.

A short forecabin is fitted above the upper deck, right forward, in the port side of which are arranged cabins for the first and second officers, the quartermasters and watchmen. In a corresponding position on the starboard side are the owners' staterooms. On the forecabin deck above is situated a large steel deckhouse containing an observation room and the captain's quarters. The top of this house forms the navigating bridge, upon which stands the wheel house. The accommodation provided at the after end of the vessel is arranged in a large steel house surrounding the engine and boiler casing, and includes engineers' quarters, galley, dining rooms for owners, officers and crew respectively, and berths for the crew. The firemen's accommodation is on the main deck just abaft the engine room casing.

A powerful steam windlass of the quick warping, direct grip type is located on the upper deck under the forecandle. The cables are 2½ in. diam., each being attached to a stockless anchor of 8,000 lbs.

The hatch covers are of 4 in. spruce. On previous vessels of this class steel telescopic hatch covers were used for quick handling, but after the loss of so many vessels on the Great Lakes in Nov., 1913, during the storm when the s.s. James Carruthers was among the number, a great many owners have preferred to go back to the heavy and more unwieldy wooden covers. Heavy steel strong backs are fitted athwartships to lend additional support to the covers. Another feature in this vessel is that the engine and other skylights have been made entirely of steel instead of wood, and 16 in. circular deadlights have been fitted in the deckhouses in lieu of the square windows formerly adopted in this type of vessel. The deckhouses have been specially stiffened to stand excessive abuse.

The boat outfit includes two 22 ft. metallic life boats, and one 18 ft. gasoline launch for use in harbor. All boats are placed aft on a level with the deckhouse, attached to sliding davits, and fitted with patent releasing blocks. The vessel has two steel pole masts, one forward and one aft, for signalling purposes and to carry the running lights. Awnings are

fitted over the forecastle deck and pilot houses. Draught gauges are placed at each end of the vessel, so that the draught forward and aft may be read at the same time. The vessel is lighted throughout by electricity, the total number of lights being about 200. For providing the necessary current, two electric generators, each with a capacity of 10 kilowatts, are fitted at the after end of the main engine room.

The propelling machinery, located at the after end of the vessel, consists of a single set of triple expansion reciprocating engines, with cylinders 24, 40 and 66 in. diam., by 42 in. stroke, capable of de-

veloping 2,400 i.h.p., and of driving the vessel 13 miles an hour when loaded. Steam is generated by three single ended boilers of the Scotch marine type, each 13 ft. diam., by 11 ft. long, designed for a working pressure of 185 lb., on the forced draught system. The machinery includes 1 centrifugal and 2 duplex ballast pumps, 1 sanitary pump, 1 duplex main feed pump, and 1 duplex feed and fire pump. The air circulating and bilge pumps are directly driven from the main engines and in addition to these, a hand bilge and fire pump are also provided.

The vessel is being built by the Colingwood Shipbuilding Co., Ltd.

The Hochelaga-Etoile Collision.

An investigation into the causes of the collision between the s.s. Hochelaga, owned by Furness Withy and Co., and chartered to the Dominion Coal Co., and the paddle wheel steamship Etoile, near the Platon buoy in the St. Lawrence River, July 19, was held at Montreal recently, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and J. O. Grey as nautical assessors. The evidence showed that the Hochelaga, which was fully equipped, was bound from Montreal to Sydney light, and was in charge of a pilot. When steering for Portneuf light, a vessel's lights, white and red, were observed on the starboard bow, about 1½ miles off. After reaching the Portneuf light a change of course was necessary, which brought the lights of the other vessel, which was the Etoile, on the port bow, the vessels being about 600 or 700 ft. apart, when all at once the green light was perceived. The Etoile then blowing 2 or 3 blasts was answered by 1 blast from the Hochelaga. A one blast signal and full speed astern orders were given on the latter vessel, but the Etoile came on for the port bow and the impact followed. The master stated that he chose to risk grounding his vessel, which he did, rather than risk a collision, but the collision happened. The Etoile carried a first officer and a pilot who steered as well. He was always on duty and on this occasion had come from Montreal and after landing passengers at Platon, had waited for tide to make other places. The speed of the vessel was about 9 miles an hour. The master stated that he guided himself entirely by the lights. He had a compass but it was not used. When told by the pilot that he saw a vessel coming, he saw a green light on his starboard side, and after seeing that, he saw three lights for one or two minutes, then the red, but when he saw the three lights he sounded two blasts signifying that he wanted to keep to the left of the channel, but never altered the helm. Then he received one blast and replied with two, rang "ease away," then "stop," then "reverse," and the collision occurred.

The pilot stated that he held a master's certificate since 1889, and was engaged on the Etoile as pilot and wheelman, and that he dealt entirely with the navigation of the vessel, but the master saw to the bells when making a landing. When the Hochelaga's red light was seen the master gave the order to starboard and kept the wheel hard to starboard until the collision occurred. He stated that there were three signals given with the whistle, they answering with two blasts, twice the signal of one blast of the Hochelaga. When the master gave him the order to starboard, he immedi-

ately relinquished all responsibility. Had he been left to his own devices, he stated that he did not know what line of conduct he would have followed. It was a matter of seconds between the order "full astern" and the collision, and at the moment of collision the wheel escaped from him and struck him on the arm, disabling him for 10 days.

In dealing with the Hochelaga, the court found that the actions of the vessel up to the hearing of the first two blast signal from the Etoile bore all the earmarks of proper navigation and seamanship, but instead of replying by one blast the proper action would have been to sound three blasts and put the engines full speed astern, in conjunction with a hard to port helm. These actions would have caused her to swing more rapidly to starboard, and the probabilities are that if there had been an impact, it would have been trifling, and the Hochelaga, had she grounded, would only have received minor damage, if any, and this would have met the requirements of article 23. The fact of not sounding three blasts when the full astern order was given did not contribute to the collision, as at that time it was inevitable. The collision was imminent at the first two blasts from the Etoile. The court commended the action of running the risk of grounding the vessel rather than colliding. The court therefore criticized and censured the master, Capt. W. G. Tudor, and the pilot, S. Perron, of the Hochelaga, for the error of judgment mentioned.

Regarding the Etoile, the court pointed out that the man at the wheel was engaged as a pilot, though he did not hold a license as such, and although he held a master's certificate, it was issued many years ago. The pilot's evidence convinced the court that the master chose to order the Hochelaga to starboard his helm and pass green to green to him, while he was showing his red light to the Hochelaga. To make such a request under the conditions existing, so near a buoy and shoal water, was nothing short of criminal, and had it been performed by one versed in navigation methods and thoroughly conversant with the rules of the road, it would apply in a forcible manner, but the evidence shows that the master and the pilot of the Etoile showed great ignorance in these matters. The court therefore attributed the signal of two blasts as an absolute proof of ignorance of the rules of the road. Again, when the Hochelaga gave one blast in return, it was the imperative duty of the master of the Etoile to put his vessel full speed astern immediately, which he failed to do. The pilot, M. Chabot, who held a master's certificate for minor inland

waters, granted some 30 years ago, was still unable to tell the port or starboard sides of the vessel properly, and admitted that he only read the rules of the road after the collision. Such an admission from a master is, to say the least of it, astounding. His engagement was verbal, but was to the effect that he was to pilot and navigate, yet at the crucial moment, when danger was impending, he ceased to act, or advise, and attempted to free himself of the onus of the disaster by stating that the master took command. The court remarked on the method of keeping the lookout and disapproved of the lookout man being in the wheelhouse, and the practice of the lookout man helping with the wheel is to be condemned owing to the lengthy hours the man would be called upon to give to these duties. The letter and spirit of the rules of the road, which orders that a good lookout be kept, were not met in this case.

The right to navigate the St. Lawrence or any other waterway is not given to large vessels, or counsel for the Etoile rightly remarked, when he claimed privileges for local traffic, and the court replied that since that privilege is given it must be with the understanding that those engaged in such traffic must possess the requisite knowledge to command and operate the vessels plying in these waters, similarly, but proportionately, to those commanding large and foreign going vessels. That there was no loss of life was providential, and not due to any knowledge of navigation or rules of the road on the part of the master, Capt. J. D. Boisvert, and the court found that the master, and the pilot, M. Chabot, invited the collision by deliberately violating articles 19, 21, 23, 25 and 29 of the Rules of the Road, and it decided that it must see that a repetition will be impossible and it will allow Capt. J. D. Boisvert's presence on his vessel as owner, but not as master, and therefore cancels his certificate, 1407. Regarding the pilot the court is of opinion that he holds a master's certificate unworthily. It is true he was engaged verbally as a pilot, and as there was no agreement or articles signed by any of the crew, the court assumed that his duties were equivalent to a sailing master, and having that in view, cancelled his master's certificate. While the court censured the master and pilot of the Hochelaga, it sympathized with them for the distressing and nerve racking moments they were subjected to when meeting a situation forced upon them by the ignorance of some local navigators, and fortunately such utter disregard of the rules is rarely met. The court also expressed the opinion that it is established not only to find fault and penalize but also to make recommendations with a view to bettering the situation as it is found, and thus counsels that a positive assurance of the knowledge and ability of an applicant be obtained by strict methods before a certificate is given to him to permit of his mingling with others of the profession. Sec. 152, part III, cap. 113, R.S.C. 1906 obliges masters of all vessels above 80 tons to have the crew sign an agreement. The Etoile, which is of much greater tonnage, violated this section, as none of them signed an agreement in accordance with the act, therefore a prosecution against the owner or owners is obvious.

The International Mercantile Co.'s Receiver, was discharged at Trenton, N.J., Oct. 3, after it was shown that all claims against the organization had been withdrawn or paid.

Five New Tank Steamships for Imperial Oil Co.

The Imperial Oil Co. is adding to its fleet five steel oil tank steamships for service on the Great Lakes during the summer and on the ocean during the winter when lake navigation is closed. The following are the dimensions of the first three, viz., s.s. Royalite, s.s. Iocolite and s.s. Sarnolite: Length overall 258 ft.; length b.p., 250 ft.; breadth, moulded, 43 ft.; depth, moulded to main deck, 18 ft.; gross tonnage, 2051.83; net register tonnage 1542.44; deadweight loaded, 2700 long tons; total capacity of oil cargo tanks, 124,500 cu. ft. The expansion trunk is 7½ ft. high and extends the full length of the oil tanks. Each vessel is divided into 10 main oil tanks, 4 lubricating oil tanks and a cross bunker for oil fuel. Side bunkers are fitted for carrying coal, the vessels being designed to work on either coal or oil fuel. The pump room, which is forward of the foremost tank, is equipped with two 18 x 14 x 24 in. duplex oil pumps for handling

stalled, including independent main feed large size general service and fire pump, sanitary and fresh water pumps, surface feed water heater, evaporator and distiller.

The steam steering gear is on the main deck aft and connected directly to a fixed quadrant. The steam windlass is of the patent direct grip type with warping ends. Each vessel has two pole masts with one derrick on each for handling suction hose pipes. Three 6 x 8 single drum winches are carried for mooring purposes and to operate the derricks, 2 on the main deck forward, 1 port, and 1 starboard, and 1 on the poop deck.

Quarters for the captain, the Marconi wireless operator and the wireless instruments, are provided in a house on top of expansion tank. The engineers are housed in the poop, and accommodation for the 1st and 2nd mates, petty officers and seamen is provided in the forecabin. A very complete system of

Imperial Oil Co.'s s.s. Sarnolite.

the cargo quickly and so arranged that either pump can pump out any tank, whether on the port or starboard side; the control valves being operated from the top of the expansion trunk. A steam driven fan is also located in the pump room for the purpose of drawing the foul gases from the various cargo tanks and pump room, or blowing fresh air in as desired. Nos. 1 and 2 tanks have been arranged for carrying gasoline, and a cofferdam has been fitted aft of these so as to separate them from the other oil tanks. Another cofferdam is fitted between the oil fuel bunker and the oil tanks. A small cargo hold is fitted between the fore peak bulkhead and the pump room and will be used occasionally for carrying case oil. The main oil suction is 8 in. diameter with 6 in. branches and are arranged so that the pumps can draw from any tank and discharge into any other. Provision has been made for the carriage of water ballast in the forward and after peaks and in the double bottom under engines and boilers.

The propelling machinery consists of a set of surface condensing engines 16, 26 and 44 x 36 in. stroke, with direct connected air pump and 2 bilge pumps. Steam is supplied by one Scotch boiler 15 ft. diam. x 11 ft. long, working at 180 lbs. pressure under natural draught. A complete set of auxiliaries has been in-

stalled, including independent main feed

electric lighting has been installed. Generally speaking, the vessels are of the most up to date character for carrying oil in bulk and everything has been done to ensure that the equipment and workmanship is of the best character.

The Royalite's trials were run on a measured mile course outside of Collingwood harbor on June 14. The principal results are shown below, the designed speed of 9 knots on 14 ft. draught being exceeded.

Boiler pressure	180 lbs.	175 lbs.
Revolutions per minute.	78.8	87
Total i.h.p.	678	937
Speed	9.183 knots	9.863 knots
Draught forward and aft	14 ft.	14 ft.
Admiralty	$D^2 \div s + S^3$	
Coefficient	255	228
	I.H.P.	

The Iocolite ran trials on Sept. 15, with equally satisfactory results. The Sarnolite was launched on Sept. 27, and is expected to leave the lakes for the ocean late in November. The vessels have been built by the Collingwood Shipbuilding Co. under the supervision of Capt. R. W. Henderson, Commander, U.S. Navy, and now Marine Superintendent, Imperial Oil Co.

In addition to the above, work is about to be commenced at Collingwood on two more steamships for the Imperial Oil Co., viz., s.s. Torontolite and s.s. Tararalite. They will be somewhat larger than the first three described above, be-

ing 250 ft. long, 43 ft. 9 in. breadth, moulded, and 25 ft. depth moulded to main deck.

Regulations Respecting Collisions with Navy Vessels.

An order in council has been passed providing that if any vessel causes any injury by collision or otherwise to any ship belonging to or engaged in the service of His Majesty, or to any person on board such ship, or is so navigated or managed as to cause danger of collision, the master or person in charge of the vessel shall be guilty of an offence unless it is shown that such injury or danger of collision was not caused or contributed to by any failure on his part to keep or cause to be kept a proper lookout, or to observe any of the regulations for preventing collisions at sea, or any regulations relating to the navigating or mooring of ships in a harbor or the approaches thereto, or to take any precaution required by ordinary practice of seamen, or by the special circumstances of the case.

Also that if a seaman lawfully engaged in accordance with the Merchants Shipping Act, or the Canada Shipping Act, to serve on board any British ship belonging to or chartered or requisitioned by the Admiralty, neglects or refuses without reasonable cause to join his ship or to proceed to sea in his ship, or deserts or is absent without leave from his ship or from his duty at any time, or joins his ship in a state of drunkenness, so that the performance of his duties or the navigation of his ship is thereby impeded, he shall be guilty of an offence. The master, mate or owner of the ship, or his agent, or any naval or militia officer, or any superintendent, as defined by the Merchants Shipping Act or the Canada Shipping Act, may with or without the assistance of a police constable, convey on board his ship any seaman whom he has reason to believe to be guilty of an offence under this paragraph. Police constables and other peace officers shall render such assistance as may be required of them in arresting seamen and conveying them on board under the provisions of these regulations.

Any person violating any of the provisions of these regulations shall be liable upon summary conviction before two or more justices of the peace, to a fine not exceeding \$5,000, or to imprisonment for not exceeding five years, or to both fine and imprisonment.

The Borghild-Oriole Collision.

Judgment in the matter of the collision between the Norwegian s.s. Borghild and the U.S. fishing schooner Oriole, near the entrance to the Bay of Fundy, Aug. 12, when the schooner was sunk and four lives lost, was delivered at Halifax, N.S., recently, by Capt. L. A. Demers, Dominion Wreck Commissioner, with Commander Wyatt, R.N.R., and Capt. A. Cuthbert, nautical assessors, concurring. The court found the master and mate of the s.s. Borghild in default for violating article 16 of the Rules of the Road, and also found the master of the schooner Oriole equally at fault for carrying a press of canvas, violating the first paragraph of article 16 and therefore inviting a collision. As both vessels are of foreign register, the court had no jurisdiction over the officers' certificates.

The New Steamships Thorjerd and Blaamyra.

Two sister steel freight vessels are being built at Port Arthur, Ont., for unnamed owners. Their dimensions are: Length over all, 261 ft.; length between perpendiculars 251 ft.; breadth moulded 43 ft.; depth moulded 28 ft. 2 in.; carrying capacity about 3,000 gross tons.

They will be of the single deck type, with poop, bridge and forecastle, steel deckhouse on bridge deck and chart room on top of deckhouse, with navigating bridge. They are being built on the transverse system of construction. There will be two cargo holds with two hatches in each hold. No. 1 hold will extend from collision bulkhead to boiler room bulkhead and no. 2 hold from engine room bulkhead to after peak bulkhead. The propelling machinery will be located amidships. The double bottom will be 3 ft. deep and will extend from collision bulkhead to after peak bulkhead, divided by transverse water or oil tight floors into a number of compartments. Part of the double bottom will be utilized to carry fuel oil, the remainder of the fuel to be carried in wing tanks, which can also be used for coal. The officers and crew will be berthed amidships on bridge deck, where also will be the mess rooms, galley, pantry, lavatories, etc. The firemen and sailors will have their quarters aft on main deck.

The two main boilers will be of the Scotch marine type, single ended, and arranged abreast. They will be 14 ft. 8 in. diam. by 11 ft. long and will have a combined grate area of 126 sq. ft. Each boiler will have three corrugated furnaces, of the suspension type, 42 in. inside diam. They will be fitted for natural draft.

The propelling machinery will consist of triple expansion engine with surface condensers, built-in type, 3 cylinders each, working each on a separate crank placed at an angle of 120 degrees. The slide motion will be of the Stephenson link type. Cylinders 20, 33 and 54 in., with a stroke of 40 in. The average working horse power will be 1,200, maximum 1,300. The high pressure cylinder will have piston valve, the low and intermediate will have double ported slide valves with relief frames, and the low pressure one will have a Lovekin assistant cylinder. The high pressure cylinder will be supplied with a loose bushing of hard cast iron. All cylinders will have relief valves, top and bottom, discharging into the atmosphere. The turning gear will consist of a single cylinder engine, driving through worm gearing, a shaft mounted on sliding cast steel worm. The propeller will be of cast iron, solid section, with four blades. The air pump will be bolted to the back column of the engine.

The steam steering gear will be placed on the main deck in the engine room. There will also be a hand steering gear aft. There will be a 8 x 6 in. steam windlass fitted with hand attachment and friction brakes. All anchors will be of the stockless type, of size in accordance with Lloyd's requirements. To facilitate the handling of the cargo there will be six 7 x 12 in. reversible steam winches, and 6 derrick booms to lift 4 tons each.

The vessels will be fitted throughout with electric light. One 7½ k.w. generator will be fitted in engine room. All wires, with the exception of those in cabins, will be enclosed in conduit, with outlets terminating in watertight fix-

tures. In the cabins the wire will be run in wood mouldings.

The vessels are being built by the Western Dry Dock & Ship Building Co., Ltd., to take the highest class in Lloyd's Registry and under their special survey. The Thorjerd was launched Sept. 27, and the Blaamyra during October.

Stranding of the s.s. Matatua.

An investigation into the cause of the stranding of the Shaw, Savill and Albion Co.'s s.s. Matatua in St. Mary's Bay, Nfld., July 22, was held at Halifax, N.S., recently, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander E. Wyatt, R.N.R., and Lieutenant R. H. Wright, R.N.V.R., as nautical assessors. The evidence brought out that the master, Capt. Jas. MacFie, upon reaching St. John, N.B., to take command of the Matatua, after the death of her former master, was stricken with paralysis on the left side of his face, and acknowledged that he was not in a fit state to take command, but seeing he was on the spot, he did not want to give it up; a fire partially destroyed the vessel, a series of explosions occurred on board which had the effect of tearing her decks, bending frames and causing other injuries, and she sank, resting on the bottom of the dock in St. John with the falling and rising tides, her compasses, standard and steering were also injured. Upon leaving St. John an adjuster was called to adjust the compasses, but it is evident that none of the officers watched the operation. The vessel proceeded to Halifax, where she underwent some temporary repairs, new plates being put in and patches made here and there, all of which tended to disturb the induced and permanent magnetism of the vessel. Then the master discovered that the magnet for correcting the heeling error had not been placed, therefore the adjustment for that particular correction had not been installed, and consequently the compass was not adjusted. During her course from Fame Point, which was traced with the intention of passing between Cape North and St. Paul's Island, the master found after experiencing some hazy weather, that he passed to the north side of St. Paul's Island, which meant that the vessel had outrun her distance; then a course was traced for Sydney, N.S., which apparently was made good. He left Sydney, July 21, and when passing Flint Island a departure was made by a cross and four point bearing and the log was set. The vessel was kept on her course, and full speed was maintained during fog, until just before she grounded the next morning. The master was supplied with a new set of charts as well as sailing directions by his London office, but he never consulted them. He had sailed in these waters before but not on this particular route.

The court could not understand why a man of the ability of the master omitted to take elementary precautions in navigating his vessel. In view of the uncertainty which should have existed in his mind, the court thought it apparent that navigating his vessel through the Gulf of St. Lawrence until he reached the ocean demanded unusual caution on his part. Had he read his sailing directions he would have found that at a certain period of the year, in the Cabot Strait, the current has a trend northward, which is amply proved in the present case, and he would surely not have kept his vessel at full speed in a thick

fog, and without casting a lead. It is not permissible for a master to navigate his vessel in a fog for a number of hours without diminishing his speed if necessary to take soundings, and frequent soundings, to check his courses. He stated that he did not think it was necessary as he considered himself at sea and that the soundings were not reliable. The court contradicted this statement, as it was aware that vessels carrying passengers and coming to Canada, after making Cape Race, or entering Cabot Strait, are led entirely by the lead. Soundings, although irregular, if a chain of them be taken, will show without doubt the position of a vessel, and the existence of whatever elements there may be to influence the vessel outside the course presumed. It could not find any excuse for the master failing to take soundings, even though he was short of tubes for his sounding apparatus, because he had a deep sea lead, and could use it as was done before sounding machines were invented. So far as the evidence went the court was of opinion that the necessary means were adopted to free the vessel after she grounded. The condemnation by the court is based purely on the action of the master in not acting in a prudent and careful manner. In fact, without hesitation, the court stated that the vessel was carelessly navigated in view of the possible conditions existing, and it was of the opinion that from the outset, the master was not in a fit condition to assume the grave responsibility which devolved upon him. The duty of the court would not be complete and its existence would not be justified if it did not condemn the master for faulty navigation, and therefore, though it had a great deal of sympathy with him in his affliction, as he accepted the responsibility, the court suspended his certificate for three months from Sept. 15 to Dec. 15.

Discontinuance of Lights and Fog Alarms for the Winter.

All Canadian light and fog alarms on the St. Lawrence River above Montreal, Lakes Ontario, Erie, St. Clair, Huron, Georgian Bay, Lake Superior and connecting waters, will be maintained in operation until the morning of Dec. 25, excepting the southeast shoal lightship, Lake Erie, which may be forced to abandon her station by ice conditions before the general close of navigation, and also at Lonely Island, Georgian Bay, from which the keeper may be removed before the close of navigation, also certain stations on Lake Superior, viz., Slate Islands, Battle Island, Lamb Island, Shaganash, Point Porphyry, Thunder Cape, Welcome Islands, Pie Island and Victoria Island, which will close after the last sailings to or from Port Arthur and Fort William. All gas buoys and other floating aids to navigation will be maintained in position as long as ice conditions will permit, and in cases where it is necessary to remove gas buoys before the close of navigation the more important ones will be replaced by spars. Light keepers are cautioned to maintain their stations in operation until the time mentioned above, viz., the morning of Dec. 25.

Norman A. Rule, Treasurer, Standard Shipping Co. Ltd., Winnipeg, writes: "I feel that the regular receipt of the Canadian Railway and Marine World is instructive to all of us."

Atlantic and Pacific Ocean Marine.

What is said to have been the most valuable cargo of raw silk ever landed on this continent was discharged at Vancouver recently from the C.P.R.'s s.s. Empress of Russia. It was valued at about \$3,500,000.

The Matsuo Co., of Seattle, Wash., and Kobe, Japan, is reported to have placed an order for the building of four steel steamships of 8,800 tons each, costing approximately \$1,000,000, with the Wallace Shipyards, Ltd., Vancouver.

The Belgian Government is financing a new steamship service to be operated between Havre, France and U.S. ports. The company will have a nominal capital of 100,000,000 francs, which will be guaranteed as to principal and interest by the Belgian Government.

The s.s. Arabien, owned by the Danish East Asiatic Co., Copenhagen, and under charter to Canadian Pacific Ocean Services, Ltd., for operation between Vancouver and Vladivostok, was docked at Esquimalt during October for overhaul and repairs.

The Cunard Line announces that two of its steamships, the Feltria and Folia, formerly owned by Canadian Northern Steamships, Ltd., will call at Halifax, N.S., during the winter, both eastbound and westbound, on the regular route between Bristol and U.S. ports.

The Ulster Steamship Co., operating the Head Line between Great Britain and Canada, is claiming \$25,000 in the Montreal Admiralty Court, for services rendered in salving the s.s. Fremona, which grounded on Anticosti Island, Aug. 1.

Canadian Robert Dollar Ltd., has been incorporated under the British Columbia Companies Act, with \$40,000 capital and office at Vancouver, with power among other things, to own and operate steam and other vessels for the transportation of mails, merchandise and passengers.

Manchester Liners, Ltd., has added three vessels to its fleet, one for each of the services to Canada, Philadelphia and Baltimore. The company now owns 17 vessels, aggregating 125,316 tons dead-weight capacity, operating directly to and from Manchester, Eng., via the Manchester Ship Canal.

The repairs on the Japanese s.s. Kenkon Maru 3, which stranded on the Belle Chain reef on Jan. 12, have been completed at Portland, Ore., and she resumed her service in October. The cost of the

repairs was \$175,000, and the work took 42 days. The vessel is about 20 years old and was formerly the British s.s. Ailsa Craig.

The Japanese s.s. Shintsu Maru, which ran ashore about four miles south of the Sandheads buoy at the mouth of the Fraser River, Sept. 22, was released Sept. 29, after practically all of her cargo had been lightered. She was docked at Vancouver, and it was stated that neither the vessel nor her cargo had been injured and that there was no damage to be repaired.

The Hudson's Bay Co. is reported to have purchased the s.s. Sacramento from the Northern and Southern Steamship Co., of San Francisco, Cal. The Sacramento was formerly the s.s. Alexandria, and was owned by the Kosmos Line. It is stated that the vessel has been detained at Valparaiso since the commencement of the war. The price paid is given as \$800,000.

P. A. Franklin, Vice President, International Mercantile Marine Co., is reported to have stated recently that the war has developed the necessity for a line of fast steamships in the trans-Atlantic service, and that the company is ready to build four 25 knot quadruple turbine steamships of from 32,000 to 35,000 tons each. Two of these, it is said, will be ordered in the U.S., and two in Belfast, Ireland.

The Cunard Line s.s. Alaunia, which was sunk by a floating mine in the English Channel, Oct. 19, was built at Greenock, Scotland, in 1913, for the Canadian service, and was launched June 7, 1913, her sister vessel, the Andania, having been launched in Mar., 1913. She was 540 ft. long, 64 ft. broad and 46 ft. deep, and equipped with two sets of quadruple expansion engines and complete up to date equipment for the accommodation of 2,140 passengers, two classes only. It is reported that two of her crew lost their lives.

The C.P.R. is reported to have purchased the s.s. Hackness from Pyman Bros., Ltd., of Wales. The s.s. Hackness was built in 1914, and is of the shelter deck type, 4,928 tons gross, 2,954 tons register. She was formerly owned by the London & Northern Steamship Co., owning 16 vessels with a combined carrying capacity of 92,000 tons, all of which have been acquired recently by Pyman, Watson & Co., Ltd., South Wales, for about £2,000,000. The s.s. Hackness has been under charter to the C.P.R. for several months for its Atlantic service.

The Anchor Line, in which the Cunard

Co. has practically a controlling interest, has absorbed the Donaldson Line, and the two companies will be operated under one management as the Anchor-Donaldson Line, with Sir Alfred Booth, Chairman, Cunard Co., as Chairman. The Donaldson Line has been operating between Glasgow and Canada for several years, and uses the steamships Athenia, Cassandra, Letitia and Saturnia on that service. In addition to this a regular service is run to the River Plate. The Anchor Line operates in the passenger trade between Glasgow and New York.

It is announced in Montreal that the Marine Navigation Co., a French company, has arranged for regular sailings from Canadian ports, Montreal in summer and Halifax in winter, to St. Nazaire, France. It is stated that the first vessel to sail early in November will be the Nigaristan, and that she will be followed about two weeks later by the North Cambria. These two vessels will make regular monthly trips, and will be supplemented by others if the necessity arises. The company is reported to have purchased a number of sailing ships from Aberdeen, Scotland, recently, for the Canadian lumber and coasting trade.

During the visit of the Minister of Customs to Vancouver recently he was again urged to consider the appointment of a Canadian customs officer at New York to facilitate the handling of freight in bond originating in Eastern Canada and destined for British Columbia ports, via the Panama Canal. It was suggested that a solution of this difficulty might be made with the inauguration of a new steamship line from Montreal in the summer and Halifax or St. John in the winter, or by an extension of the present line now running to and from New York. An Ottawa press dispatch of Oct 14 stated that for the present at least the Minister has refused the request.

The C.P.R. is going to overhaul its trans-Pacific steamships at the beginning of the New Year. They will be laid up at Hong Kong for renovation and repair. The s.s. Empress of Asia will be taken in hand first, on her arrival there about Jan. 17, and she will be out of service for about a month. She will be followed in turn by the steamships Empress of Russia and Empress of Japan, the first being out of service for a month and the latter for 26 days. The Empress of Asia and Empress of Russia have not been completely overhauled since they were released from Admiralty service about a year ago. The s.s. Monteagle was overhauled at Hong Kong recently.

NOVEMBER, 1916.]

Maritime Provinces and Newfoundland.

The hull of the s.s. Senlac, which was damaged by fire at Sydney, N.S., recently, is reported to have been sold to C. Brister and Son.

The Imperial Oil Co. has deposited with the Public Works Department at Ottawa, plans and description of site for a wharf to be built at Halifax, in the harbor in front of lands adjoining Fort Clarence southward of the eastern side of the harbor.

The French Cable Co.'s cable repair steamship Contre-Amiral Caubert was purchased recently by W. N. McDonald, Sydney, N.S., the stated price being \$102,000, and after being renamed Vigo, was sold to New York parties. She was built at Havre, France, in 1875, and is 2,078 tons gross, 1,137 register.

It is reported that the steam tug Amelia, which plies between Pictou, N.S., and Prince Edward Island, has received \$100,000 as salvage for towing the Belgian s.s. Indutiomare, which had been abandoned as a total loss near Magdalen Islands, into Halifax. The value of the cargo is given as \$200,000.

With reference to the report mentioned in our last issue, that the Dominion Government had purchased the Central Vermont Transportation Co.'s steamships Manhattan and Narragansett, for \$1,000,000, we have been officially advised that it is incorrect, and that there have been no negotiations regarding such purchase. In commenting on the report, we stated that it should not be taken seriously.

The St. Lawrence Timber, Pulp and Steamship Co., Ltd., has been registered in London, Eng., recently with £103,000 capital, to acquire and develop timber estates in Newfoundland, and to carry on the businesses of shipowners and builders, shipwrights, ship and insurance brokers, managers of shipping property, etc. An agreement is in contemplation to purchase from M. Deacon certain rights at Bonne Island, Nfld.

The Eastern Steamship Co.'s s.s. Calvin Austin, which has been on the St. John, N.B., and Boston route for some time has been transferred to the Boston-Portland route, and her place has been taken by the s.s. North Star, formerly on the Portland-New York route. During the winter the North Star will be the only vessel of the company on the St. John and Boston route, the s.s. Governor Cobb being transferred to the winter service between Key West and Havana.

The St. Mary's Bay Steamship Co.'s s.s. Mikado struck a ledge on the eastern side of Petite Passage, near Digby, N.S., at the end of September and subsequently became a total loss. The cargo of mixed freight for Weymouth and St. Mary's Bay ports, was salvaged. She was built at Shelburne, N.S., in 1896, and was screw driven by engine of 16 n.h.p. Her dimensions were: Length 82 ft., breadth 18 ft., depth 7.7 ft., tonnage 80 gross, 49 register. She was formerly known as Westport.

The St. Peter Canal, on the south coast of Cape Breton Island, N.S., is partially closed to navigation, and vessels drawing more than 16 ft. cannot pass through. At present vessels drawing not more than 16 ft. can pass between half tide flood and half tide ebb, and it is expected that in a short time they will be able to pass through the canal at any stage of the tide. The certificate of registration of the

Oruro Steamship Co., Ltd, has been revoked by the Nova Scotia Registrar of Joint Stock Companies, owing to non-payment of annual registration fees.

The St. John, N.B. Board of Trade passed a resolution, Oct. 13, and sent a copy to the Dominion Government, urging the use of Canadian ports as a solution of the difficulties arising from the recent submarine raid on vessels off the U.S. coast. It was pointed out that trade with Canadian ports is protected by the British Navy, and that any submarine menace that might arise could be dealt with more effectually and without international complication. It was requested that all goods intended for Great Britain be routed through Canadian ports.

The ferry service between New Brunswick and Prince Edward Island is being performed by the s.s. Northumberland and the car ferry steamship Prince Edward Island. The Northumberland is operated by Canadian Government Railways between Point du Chene, N.B., and Summerside, P.E.I., making one round trip daily except Sunday; and the car ferry steamship Prince Edward Island runs between Pictou, N.S., and Charlottetown, P.E.I., making one round trip daily except Sunday. No decision has been arrived at as to the time of writing as to the winter service, as it was an open question whether the approaches at Cape Tormentine and Cape Traverse will be ready for a winter car ferry service.

Province of Quebec Marine.

It is reported that orders have been placed with Canadian Vickers, Ltd., Montreal, for the construction of two steamships, each of 7,000 tons capacity.

The Public Works Department has completed dredging in front of Les Eboulements wharf at Cap Joseph, to a depth of 15 ft. below low water level. The area dredged is from 183 ft. eastward of the southwest corner of the wharf to 247 ft. westward of same.

The icebreaking steamship J. D. Hazen, which was recently built by Canadian Vickers, Ltd., at Montreal, for ice service in the St. Lawrence River, and which was sold to the Russian Government imme-

diately after being completed, has been somewhat overhauled to meet the wishes of her new owners, and has been renamed Mikula Selianovitch. She underwent a series of trials at Murray Bay, Oct. 23, and will probably sail for Europe at any time.

The Davie Shipbuilding and Repairing Co., Levis, has been awarded the contract for the overhauling of the nine steamships which the French Government purchased recently from the Great Lakes and St. Lawrence Transportation Co., after which, they will proceed to Europe. An injunction was obtained recently in Chicago, restraining the sale, but as the vessels were then in Montreal, and the sale apparently made, nothing could be done in the way of holding them.

During the convention of the American Association of Port Authorities at Montreal recently, the delegates paid a visit to Quebec, where they were entertained to luncheon by the Harbor Commission, being welcomed by D. O. L'Esperance, Chairman, the Mayor and J. G. Scott, President of the Board of Trade. They were taken over the various harbor works in progress, and had an opportunity of seeing the full advantages offered at the port, including the unloading and loading of lake steamships and ocean steamships, both freight and passenger. One of the ocean steamships to load at the elevator was the Arachne, which had just come out of the local dock after having been repaired and overhauled subsequent to being wrecked on Anticosti Island.

Ontario and the Great Lakes.

The Dominion Government hydrographic steamship La Canadienne, which ran ashore at Dorion, Lake Superior, Sept. 17, was released about a week later and taken to Port Arthur for examination and repair.

The Canada Atlantic Transit Co. held its annual meeting at Ottawa, Sept. 26, when the following board of directors was elected for the current year,—E. J. Chamberlin, President; H. G. Kelley, Vice President; Frank Scott, Secretary and Treasurer; J. E. Dalrymple and H. R. Safford.

The Great Lakes Transportation Co.'s s.s. Howard M. Hanna, Jr., when down-bound from Duluth, Minn., with ore, Oct. 13, got out of her course after passing through the canal at Sault Ste. Marie, and ran on the rocks just east of the lighthouse above the entrance to the new cut in the St. Mary's River. Part of her cargo was lightered and she was refloated with comparatively little damage Oct. 15.

The s.s. Roberval, owned by Hall and Eligh, Ltd., Ottawa, Ont., foundered in Lake Ontario, about nine miles from Oswego, N.Y., Sept. 26. Some of the crew were only rescued after having been adrift in an open boat without food for 20 hours. The Roberval was built at Toronto in 1907, her dimensions being, length 128 ft., breadth 24 ft., depth, 9 ft.; tonnage, 344 gross, 157 register. She was equipped with an engine of 27 n.h.p. driving a screw.

The steamships Rideau King and Rideau Queen, formerly owned by the Rideau Lakes Navigation Co., Kingston, but which have not been operated for over a year, were taken to Belleville recently for sale. The Rideau Queen is reported to have been sold to the Trent Navigation Co., for \$5,800. She was built at Kingston in 1900, and is screw driven by engine of 25 n.h.p., and her dimensions are, length 108 ft., breadth 27.3 ft., depth 6.9 ft.; tonnage, 251 gross, 196 register.

The Public Works Department has dredged the northerly 450 ft. of the dredged channel in Thunder Bay leading to the Mission Channel, to a depth of 25 ft. below zero of the harbor gauge, which is 601.86 ft. above mean tide level at New York. An additional width of 100 ft., with a least depth of 21 ft., is available bordering the deep channel on its south side or between it and the Mission Channel revetment wall. Adjacent to the wall the water varies from 15 to 25 ft.

The Montreal Transportation Co.'s s.s. Simla, while en route from Erie, Pa., to Montreal, with coal, struck a reef at Coronation Island, near Brockville, Oct. 3, during a fog, and foundered. She was built at Garden Island, Ont., in 1903, and was of oak, and of the following dimensions,—length 225½ ft., breadth 34 ft. 8 in., depth 15 ft.; tonnage, 1,196 gross, 730 register. She was equipped with triple expansion engines with cylinders 17, 28 and 46 in. diam., and supplied with steam by 2 Scotch boilers 11 by 11¼ ft., at 176 lbs.

The Imperial Oil Co.'s s.s. Sarnolite was launched at Collingwood, Sept. 27, thus completing the three vessels ordered to be built there, as mentioned in previous issues. The three are named Royalite, Iocolite and Sarnolite. They are built of steel for service on the Great Lakes and the ocean. They are of the following dimensions,—length over all, 258 ft.; length between perpendiculars, 250 ft.; breadth moulded, 43 ft.; depth moulded to main deck, 18 ft.; tonnage, 2,052 gross, 1,543 register; deadweight loaded, 2,700 tons (long); total capacity of oil cargo tanks, 124,500 cu. ft. The vessels are designed for a speed of 9 knots an hour on 14 ft. draught.

The name of the s.s. St. Joseph, which has been purchased in the U.S., by The Cleveland-Sarnia Saw Mills Co., Ltd., Sarnia, Ont., has had her name changed to Frank B. Stevens. She is of oak, and was built at Buffalo, N.Y., in 1867, and rebuilt in 1887. Her dimensions are, length 146 ft., breadth 29 ft., depth 11 ft.; tonnage, 304 gross, 171 register. She is equipped with compound engine with cyl-

inders 18 and 33 in. diam. by 28 in. stroke, supplied with steam by a Scotch boiler 9 ft. 10 in. by 11 ft. 4 in. The American Transit Co. has been incorporated to operate the vessel between Canadian and U.S. ports. The company was incorporated under the Dominion Companies Act with \$50,000 capital, and office at Sarnia. The officers are: E. C. Barre, Sarnia, President; A. I. McKinley, Sarnia, Vice President, and F. H. Rose, Cleveland, Secretary-Treasurer.

The s.s. Merida, owned by the Valley Camp Coal Co., Midland, Ont., with which Jas. Playfair, President and Managing Director, Great Lakes Transportation Co., is intimately associated, was lost with all hands, on Lake Erie, about Oct. 20, during a severe storm. She was built at West Bay City, Mich., in 1892, and was of steel with double bottom for watertight ballast, with 5 watertight bulkheads, steel boiler house, steam pump wells, etc. She was practically rebuilt in 1904, and was formerly owned by D. Sullivan & Co., Chicago, Ill. She was equipped with triple expansion engines with cylinders 23, 37 and 60 in. diam. by 44 in. stroke, 1,700 i.h.p., and 78 r.p.m., and supplied with steam by 3 Scotch boilers, 12½ by 12 ft., at 168 lbs. Her dimensions were, length 360 ft., breadth 45 ft., depth 26 ft.; tonnage, 3,329 gross, 2,389 register. She was purchased about a year ago by Jas. Playfair on behalf of the Valley Camp Coal Co., and has since been operated regularly on the Upper Lakes. She is valued at about \$200,000.

British Columbia and Pacific Coast.

The Melmore Steamship Co., Ltd., Vancouver, is being voluntarily wound up, with Buttar & Chiene as liquidators.

The Dominion Government lighthouse and buoy tender Quadra, which was sunk at the entrance to Nanaimo harbor, Feb. 26, after a collision with the s.s. Charmer, and was afterwards sold to the Vancouver Dredging and Salvage Co., and raised, is reported sold to eastern U.S. interests, for transfer to the Atlantic coast at an early date.

The second of the two car floats which the Canadian Northern Ry. is having built at Port Mann for conveying freight cars across Patricia Bay, was launched early in October. It is anticipated that the service will be in operation early in November. The floats will be towed across the bay by tugs which have been acquired and which are named Chilliwack and Sumas.

The Pacific Coast Steamship Co., and the Pacific Alaska Navigation Co., Seattle, Wash., have amalgamated, under the name of the Pacific Steamship Co. The first named company owns 13 passenger and freight vessels, and the latter 9 vessels. The value placed on them is about \$12,000,000. The amalgamation agreement takes effect Nov. 1. The principal officers are, H. F. Alexander, President; E. C. Ward, Vice President; W. Jones, Treasurer; E. B. Rogers, Secretary; and A. F. Haines, Manager.

M. P. Cotton, of Vancouver, who is head of the company which has been negotiating with the Grand Trunk Pacific Ry. for the lease of its drydock at Prince Rupert, returned to Vancouver recently after a series of interviews with E. J. Chamberlin, President, G.T.P.R., and members of the Dominion Government on the matter. Mr. Chamberlin had stated that he would not lease the dock without the Govern-

ment's consent, and the Premier had written him to the effect that "pending the investigations of the railway commission, it would be unwise to lease this plant at the present time." This he considered final, and all negotiations would be discontinued.

The Turbinia-Primrose Collision.

The Dominion Wreck Commissioner, Capt. L. A. Demers, delivered judgment, Oct. 20, re the collision between Canada Steamship Lines' s.s. Turbinia and the Toronto Ferry Co.'s s.s. Primrose, in Toronto Bay, Aug. 13. The enquiry was held at Toronto, Sept. 6, and the judgment was concurred in by Capt. J. B. Foote and Jas. McMaugh, who acted as nautical assessors. Following is a summary. The court is of opinion that the master of the Turbinia, in skirting the wharves to reach his coal pier, was aware that the vessel he saw was an Island ferry carrying an undetermined number of passengers. After sounding his danger signal and one blast and receiving no reply, he should have stopped his vessel, but chose to proceed on his way. By so doing, when at a couple of ship's lengths from the ferry and noticing no alteration in her course, he acted contrary to article 22, Lake Rules. He knew where the ferry was bound to, but apparently because he had, according to the rules, a right of way, he chose to proceed regardless of probable consequences, evidently forgetting to take into consideration the last paragraph of article 30, as well as article 22. The court cannot imagine how a master in a position of such responsibility as caretaker of property of such value as a ship represents, and having under his care the lives of men composing his crew, on a bright clear night, should attempt to cross the bow of a vessel which he knew to be carrying passengers, and within 30 or 40 ft. of her landing place, in order to save a few minutes of time. Fortunately there was no loss of life, as had there been, the court would have been justified in calling upon other courts to deal with the matter.

It finds the master of the Turbinia, Capt. B. W. Bongard, in default, first, when his one blast whistle was unanswered, it was his duty to stop the ship and await developments; second, there was no lookout ordered, though this was not conducive to the collision. The master has already been the subject of an investigation in a similar case, and his certificate was suspended for a certain period. The court realizes that there have been too many of these foolhardy methods adopted in the past, and that precautionary measures must be adopted before any calamity such as loss of life occurs, and as a deterrent to anyone who would feel inclined to run such risks. Though no lives were lost, it was certainly not through any proper seamanship exercised by the master. The court therefore would not be fulfilling its duty if it did not suspend his certificate 6047, for one year from date, and recommends that a mate's certificate for a passenger steamship be granted in the interim.

The master of the ferry steamboat Primrose, Capt. Alex. Brown, has also been the subject of investigation on two occasions, on one of which his certificate was suspended. His entire thought was centred on making the dock and maintaining his schedule. There was no lookout, and to a certain extent this contributed to the collision. In the absence of

local rules, the Rule of the Road prevails, and the master showed a lack of interest when he stated that he was unaware of any changes being made in the rules last February. The court maintains that it is every master's and officer's duty to be conversant with any alterations in laws governing shipping, and especially with rules of the road. Therefore the master failed, and wilfully, in observing the elementary rules which tend to safety, by maintaining his course, violating article 30, and keeping the same speed until the collision occurred. Articles 35, 37, and 38 were also flagrantly violated. For the reasons above given, it is abundantly proved that Capt. Alex. Brown lacks the judgment which is expected from the master of a vessel, and by his actions he has proved himself incompetent as a master, therefore the court cancels his master's certificate, No. 1940, but recommends that a certificate as mate of a freight steamship be granted to him.

The court calls the attention of the Marine Department to the evidence of the mate of the s.s. Primrose, who instead of keeping a lookout, was engaging in conversation with passengers somewhere away from the bow, and who stated that he held a permit to navigate for this year, given him by a member of Parliament in the form of a letter, and that years ago he held a tug master's certificate, but lost it and never applied for a renewal. It also pointed out that there appears to have been a flagrant violation of sec. 97 of the Canada Shipping Act, on the part of the Toronto Ferry Co., in the s.s. Primrose not having a properly certificated mate, as she is licensed to carry 900 passengers.

Mainly About Marine People.

J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., left Montreal, Oct. 21, for England, expecting to return towards the end of December.

Robert Fraser, Marine Superintendent, Montreal Transportation Co., Kingston, Ont., is reported to have resigned his position and to have gone to California, where he will reside in future.

J. W. Greiner, whose appointment as Mechanical Superintendent, Canada Steamship Lines, Ltd., was announced in our last issue, was formerly Fleet Engineer, Canada Atlantic Transit Co.

A. Rutledge, heretofore General Superintendent, Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, has been appointed Purchasing Agent, Canadian Pacific Ocean Services, Ltd., Vancouver, B.C.

Major W. G. Hagarty, B. Battery, Royal Canadian Horse Artillery, C.E.F., son of J. H. G. Hagarty, of the St. Lawrence and Chicago Steam Navigation Co., has been awarded the D.S.O. for conspicuous bravery at the front.

H. A. Sanderson, heretofore President, and **P. A. S. Franklin**, heretofore Vice President, International Mercantile Marine Co., have been elected Chairman of the Board, and President, respectively, for the current year.

Sir William B. Bowring, head of the firm of Ct. T. Bowring & Co., London, Liverpool and New York, died at Liverpool, Eng., Oct. 22. He was born at St. John's, Nfld., in 1837, and was a director of Bowring Bros., Ltd., shipowners and importers, St. John's.

Capt. James Ewart, who died at Toronto, Oct. 5, aged 68, was associated with the lakes marine since boyhood, and for some years was senior captain of the St. Lawrence & Chicago Steam Navigation Co., but retired from active service about seven years ago. His last command was the s.s. E. B. Osler, previous to which he was master of the s.s. W. D. Matthews.

Capt. William English, who died at Victoria, B.C., recently, following an operation, was a native of North Sydney, N.S., and had been connected with seafaring from an early age. He went to the Pacific Coast in 1888, in a sealing schooner, by way of Cape Horn, and engaged in sealing there for a number of years. He subsequently served the Dominion Government on the fishery cruiser Galiano, the dredge tender Princess, the lighthouse tender Quadra, and was from 1910 to 1912 in Grand Trunk Pacific Coast Steamship Co.'s service on the s.s. Prince Rupert, and the tug Escort No. 2. On the outbreak of war, he returned to Government service and was second officer on the s.s. Galiano.

Norman A. Rule, whose appointment as Treasurer, Standard Shipping Co., Winnipeg, was announced in our last issue, was born at Collingwood, Ont., Apr. 3, 1877, and entered transportation service Mar. 1, 1892, since when he has been, to Apr., 1896, office boy, Great Northern Transit Co., Collingwood, Ont.; May, 1896, to May, 1904, purser Northern Navigation Co.; May, 1904, to May, 1912, Chief Accountant, same company, Collingwood; May, 1912, to May, 1914, Superintendent, Georgian Bay Division, same company; May, 1914, to Apr., 1915, Travelling Freight Auditor, Canada Steamship Lines, Ltd., Montreal; Apr., 1915, to Sept., 1916, Assistant to Operating Manager, same company, Toronto.

Rumored Increases of Shipbuilding Plants for Canada.—A press dispatch dated London, Eng., Sept. 29, stated that Vickers, Ltd., contemplated considerable expansion in Canada, and there was linked with the name of that firm, that of Yarrows, Ltd., of Glasgow, which already has a plant at Esquimalt, B.C. The dispatch also named Sir W. G. Armstrong, Whitworth and Co., Cammel, Laird and Co., and John Brown and Co., as being on the point of laying plans for shipbuilding in Canada. Several years ago, when the question was under discussion as to whether the Dominion Government should or should not start the building of naval vessels in Canada, the firms named above, in addition to at least one other firm, considered the question of opening plants in the Dominion, but when it was decided that the Government would not build the vessels, nothing more was heard of the other proposals until the establishment of a Vickers plant at Montreal, by Canadian Vickers, Ltd. Since then, these rumors have arisen at stated periods, the same names being mentioned and in the same terms, so that one might almost think that the item was kept on hand in various newspaper offices for use when required. N. Yarrow, Manager, Yarrows, Ltd., Esquimalt, stated recently that he knew nothing of such reports, and so far as he knew any development contemplated by Yarrows, Ltd., would be independent of other concerns, and in his opinion it was highly improbable that any great expansion of the nature indicated would be inaugurated during the course of the war.

Canada Steamship Lines Notes.

The company is preparing a roll of honor containing the names of employees who have enlisted for active military service.

It is stated that the earnings of the s.s. J. H. G. Hagarty, for this season, will more than equal her construction cost. Up to the commencement of October she had carried down 14 cargoes of grain, and had also carried 12 cargoes of coal between Lake Erie ports and Fort William.

A statement issued from the company's office in London, England, announced toward the end of September, that for the first time since the outbreak of war, passenger traffic had become normal, and that business in the passenger department, for the period to the end of August, showed a net increase of \$175,000 over the corresponding period of 1915, and that there was a great increased demand for freight.

The s.s. W. C. Moreland, which has been rebuilt at Superior, Wis., was renamed Sir Trevor Dawson, Oct. 18, by Mrs. J. W. Norcross, wife of the company's Vice President and Managing Director. The Sir Trevor Dawson is now one of the largest vessels on the Great Lakes. Her dimensions are, length 598½ ft., breadth 58 ft., depth 32 ft.; tonnage 7,215 gross, 5,505 register.

A claim against the company under the Ontario Workmen's Compensation Act, by the parents of a seaman who was washed overboard from the s.s. C. A. Jaques, when on a voyage from Sydney, N.S., to Manchester, Eng., has failed. On behalf of the claimants, it was urged that there was an absence of lifebuoys and life lines on deck, but it was held that there was no evidence that had there been lifebuoys on deck anyone could or would have thrown one or more overboard, or if it had been done, that it would have been any kind of help, also that it was hardly possible that there was not plenty of rope on board, and if there were not life lines, it was the fault of the master and crew and not of the company.

The company's operations on the Atlantic Ocean for the past year form interesting reading. Twenty-two of its vessels were engaged in trading to and from different points on the ocean, and of that number, five have been lost, three of them being directly due to enemy's attacks, and the other two losses being presumed as perils of the sea. These were the Donacona, Dunelm, Empress of Fort William, Empress of Midland, and Midland Queen. The s.s. Wahcondah, after completing her charter trip to Great Britain, was, after running a special trip on the company's account, sold to British parties. Several of the vessels will be engaged with the Quebec Steamship Co., one of the company's subsidiaries, during the winter, on the West Indies route.

Manchester Liners, Ltd., reports a profit of £181,389 for the year ended June 30, after providing for debenture interest, preference share dividend, directors' fees, depreciation, reserve for excess profits duty and income tax. From this amount £100,000 has been placed to reserve, bringing that account up to £170,000, and a dividend of 10%, together with a bonus of 15%, has been paid on the ordinary shares. Of the balance, £5,565 has been transferred to first debenture reserve fund, and £20,176 carried forward to the current year's accounts.

Toronto Hamilton and Buffalo Navigation Company.

A car ferry service was inaugurated, Oct. 20, across Lake Erie, between Ash-tabula Harbor, Ohio, and Port Maitland, Ont., by the car ferry Maitland no. 1, in charge of Capt. R. T. Haagenson, to handle freight between the New York Central main line, Erie, Pa., and west, to and including Elyria, South Lorain and Toledo, Ohio, and the Oil City and Youngstown Branches, and from Pittsburg & Lake Erie Rd. stations, destined to C.P.R. territory in Canada now reached by the Buffalo gateway; to Michigan Central Rd. stations in Canada east of St. Thomas and London, Ont., inclusive; and to stations on the Toronto, Hamilton and Buffalo Ry., and the Niagara, St. Catharines and Toronto Ry. Class and commodity tariffs naming through joint rates via the Niagara frontier between points mentioned have been supplemented adding the Toronto, Hamilton and Buffalo Navigation Co. as a participating carrier, which makes the through rate applicable via the car ferry route. In addition to this, tariffs have been published to and from Port Maitland on such commodities as are now handled on the combination of local rates via Black Rock. The car ferry route will handle carload traffic and cars with less than carload shipments with a minimum of 10,000 lbs. The route affords a direct cross-lake service between Canadian and U.S. points in territories outlined above.

Following are the company's officials:—J. N. Beckley, President, Rochester, N.Y.; F. F. Backus, Vice President, Hamilton, Ont.; G. C. Martin, General Traffic Manager, Hamilton, Ont.; A. E. Lock, Superintendent Car Service, Hamilton, Ont.; G. W. Holmes, Purchasing Agent, Hamilton, Ont.; F. O. Waldo, Auditor, Detroit, Mich.; H. J. VanVleck, Assistant Auditor, Detroit, Mich.; W. R. Beckley, Secretary, Rochester, N.Y.; W. E. Hackett, Treasurer, Detroit, Mich.; R. R. Richards, Auditor of Disbursements, Detroit, Mich.; A. S. Dutton, Auditor of Freight Accounts, Detroit, Mich.; J. M. Eedson, Freight Claim Agent, Hamilton, Ont.

Load Lines and Bulkheads.—The general question of load lines and bulkheads has been coming up each year for some time past, and a definite action has now been taken by a special conference of about 40 representative shipbuilders, owners, naval architects and marine engineers, at the office of the Secretary of Commerce, in Washington, D.C. A preliminary committee has been appointed, consisting of the President of the American Society of Naval Architects and Marine Engineers, the President of the New York and Cuba Mail Steamship Co., who is also Chairman of the American Committee of Lloyd's Register of Shipping, and the President of the Newport News Shipbuilding and Drydock Co. This committee will designate a larger committee of seven to formulate general policies on load lines and bulkheads, and report to the Secretary of Commerce and the Shipping Board, when that body is appointed under the new Government Shipping Act, whence it will pass on to Congress for legislation. The Dominion Marine Association has been consulted and will keep in touch with the Canadian view, reasonable legislation with due regard to all requirements being considered desirable.

Livingstone Channel Navigation Regulations.

Amendments to the rules and regulations governing the navigation of the lower Detroit River, have been approved by the Governor in council, as follows:—

No vessel of 100 gross tons or over shall navigate the Livingstone Channel at a rate of speed greater than 12 statute miles an hour between its junction with the Amherstburg Channel at Ballard's reef and the Bar Point light vessel;

No vessel shall pass another vessel bound in the same direction in that portion of Livingstone Channel between its junction with the Amherstburg Channel at Ballard's Reef and Bar Point light vessel, nor at any other portion of either channel where the width of the channel is restricted by improvements in progress. Between any two down bound vessels entering or navigating that portion of the Livingstone Channel between its junction with the Amherstburg Channel at Ballard's Reef and the Bar Point light vessel, there shall be an interval of not less than 5 minutes.

Quebec Bridge Centre Span.—The Marine Department has issued the following notice to mariners,—"On Sept. 11 the centre span of the Quebec Bridge built to span the space between the cantilever arms collapsed while being hoisted into position and sank in the river. The channel in the vicinity has been swept to a depth of 50 ft. at low tide and found to be clear of obstruction to this depth."

Military Recruiting Among Merchant Seamen.—For the third time this year a notice has been issued from the headquarters of the 4th Military District at Montreal to the different units recruiting in that area to the effect that recruiting among merchant seamen must cease. It is pointed out that the seamen in port are signed on ships' articles, and in order to enlist, they must desert, and lay themselves open to serious punishment.

Stranding of the Shintsu Maru.—An enquiry was opened at Victoria, B.C., Oct. 13, into the cause of the stranding of the Japanese s.s. Shintsu Maru at Roberts' Point, Gulf of Georgia, Sept. 22, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. Bucknam and Clarke as nautical assessors. Owing to the refusal of the pilot, H. R. Jones, to give evidence, on the ground that he had already been punished for the mishap, by having his license suspended for three months by the Vancouver Pilotage Authority, the enquiry was adjourned, and the matter referred to the Minister of Marine for further instructions.

Norwegian Shipbuilding in Canada.—It is reported that Otto Dahl, representing a Norwegian syndicate, is visiting Canada and the United States, in order to see what space is available for building steel steamships, and to place contracts for a number, possibly 30. He is reported to have said that, prior to the war, most of the Norwegian vessels were built in England, but the shipbuilding plants there are not at present available for outside work. An order for the construction of six steamships of 8,800 tons register is said to have been placed with Wallace Shipyards, Ltd., Vancouver, and negotiations are proceeding for the placing of an order for another two similar vessels at a plant proposed to be established at False Creek, Vancouver.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Chicago Car Heating Co.—Jos. E. Buker, General Sales Manager, has been elected Vice President.

Taylor & Arnold, Limited, railway material and supplies, 404 St. James St., Montreal, have appointed N. G. Shenton as Sales Engineer.

Drew Electric & Manufacturing Co., manufacturers of electric railway, light, power and gas materials, Indianapolis, Ind., have appointed the C. E. A. Carr Co., Toronto, agents for Canada.

Roberts & Schaefer Co., engineers and contractors, Chicago, report the following orders. From Union Ry. for automatic electric, reinforced concrete, standard counter-balanced bucket, locomotive coaling plant and sand handling facilities at Sergeant Yard, Memphis, Tenn. From St. Louis, Iron Mountain & Southern Ry. for a 250-ton capacity automatic electric reinforced coaling plant at Dupo Yard, St. Louis, Mo. The Nevada Northern Ry. will build a Roberts & Schaefer automatic electric, reinforced concrete, coaling plant at East Ely, Nevada, using the new duplex shallow pit loader.

Locomotive Superheater Co., 30 Church St., New York, has issued bulletin 1, "Marine Superheaters," containing 12 pages of illustrated matter describing installations of fire tube marine superheaters on various vessels and giving results obtained. The bulletin is enclosed in a durable loose leaf cover, so that additional bulletins which will be issued from time to time, dealing with features of interest in connection with the use of superheated steam in marine power plants, may all be bound together and make a permanent ready reference book of marine superheater information.

The Decimal System for Japanese Tariffs.—The Japanese Government has authorized the Toyo Kisen Kaisha to amend its freight and passenger rates between Japan and the North American continent and South America, by the adoption of the decimal system. Its tariffs are to be issued with rates shown in dollars and cents, instead of sterling, as heretofore.

Grain Handling in Canada.—The Board of Grain Commissioners which was appointed recently as a special commission to enquire into the whole matter of handling and marketing grain in Canada, and in particular the grading and weighing, the shipping from country elevators, grain exchanges, financing, handling at terminal points and charges for same, shipment to Atlantic ports, and lake shipments, is continuing its enquiries, and gathering information on the various heads mentioned. Meetings of the Dominion Marine Association's grain section have been held to give special consideration to the shipment of Canadian grain to the seaboard, and with reference to the causes for the passage of damaged grain through U.S. ports. A report on these subjects has been drawn up and sent to the commission for consideration and report.

Transportation Conventions in 1916.

Nov. 14.—National Association of Railway Commissioners, Washington, D.C.
 Nov. 15.—American Railway Association, Denver, Col.

DEPARTMENT OF RAILWAYS AND
CANALS, CANADA.

CANADIAN GOVERNMENT
RAILWAYS.

Superstructure of Elevator, St. John, N.B.
Sealed Tenders, addressed to J. W. Pugsley, Secretary of the Department of Railways and Canals, Ottawa, Ont., and marked on the outside, "Tender for Superstructure of Elevator, St. John," will be received up to and including twelve o'clock noon, Wednesday, November 15th, for the construction of a reinforced concrete grain elevator with a capacity of 500,000 bushels.

Plans, specifications and blank form of contract may be seen at the offices of the following, on and after October 16th: Chief Engineer, Department of Railways and Canals, Ottawa.

Chief Engineer, Canadian Government Railways, Moncton, N.B.

General Superintendent, Winnipeg, Man. Resident Engineer, Fort William, Ont.

John S. Metcalf Company, Ltd., Engineers, Montreal, Que.

Contractors who wish to obtain plans and specifications temporarily for their own use, may obtain same from any of the offices at which plans are on exhibition, on depositing a certified bank cheque in favor of the Canadian Government Railways for the sum of one hundred dollars (\$100), which will be refunded on the return of the plans and specifications.

All the conditions of the specifications and contract form must be complied with.

Tenders must be submitted in duplicate on the blank form of tender which may be obtained from any of the offices at which plans are on exhibition.

Each tender must be accompanied by a certified bank cheque payable to the Honorable the Minister of Railways and Canals equal to ten per cent. (10%) of amount of tender.

The lowest or any tender not necessarily accepted.

F. P. GUTELIUS,

General Manager,

Canadian Government Railways.
Moncton, N.B., Oct. 12th, 1916.

Control of British Vessels in Atlantic Ports.—Owing to the appearance of a German submarine vessel in Atlantic waters, recently, after visiting a U.S. port, and the subsequent sinking of some vessels, the control of British and allied vessels at various ports on the Atlantic coast was placed in the hands of the Commandant of the British Naval Forces at Halifax, N.S., without whose permission no vessel belonging to these nations was allowed to leave any port. So far as U.S. ports were concerned, the Naval Commandant acted through the British Naval Attache at New York.

The Manchester Ship Canal Co. has declared a dividend of 72c a share on the preference shares and 36c a share on the ordinary shares, for the year concluded recently. During 1915, the traffic was 5,115,954 tons, and the receipts \$3,685,244. The balance after the payment of all operating and fixed charges, was \$729,770. The ordinary dividend is the first one paid. Those who remember the antagonism to the enterprise in its construction days, and the struggles of the early operating period, will be much pleased with the later results.

"BEATTY" HOISTS

For situation where the work is severe and the service exacting—"a Beatty always fills the bill"

Derrick car engined with an 8 x 12 four drum Beatty Hoist placing an 80 foot deck plate girder span in Skugog River Bridge.

Let us know your requirements for

Hoisting Engines, Steel Derricks, Derrick Irons, Electric Hoists, Clamshell Buckets, Centrifugal Pumps, Dredges, Steel Scows, etc.

We will gladly send full information.

Money paid for these Brake Shoes was largely money wasted

Why?

Because these unreinforced brake shoes did not give equivalent service for their cost, having broken in service before their life had barely commenced.

And the remedy?

Use only Reinforced Brake Shoes—then you will get your brake shoe money's worth in long and safe service.

Manufactured in Canada.

The Trained Man Wins

In the railroad business it's the *trained* man who wins. Carrying hundreds of millions of passengers every year, it is absolutely necessary that the responsible positions in railroading be filled with none but the most highly trained men. Your advancement will depend largely on the thoroughness of your training.

If you really *want* a better job and are willing to devote a little of your spare time to getting ready, the **International Correspondence Schools** can help you. More than two hundred of the railroad systems of the United States and Canada have indorsed the **I. C. S.** method of instruction and recommended it to their employes.

You're ambitious. You want to get ahead. Then don't turn this page until you have clipped the coupon, marked the line of work you want to follow and mailed it to the **I. C. S.** for full particulars. Doing so will not obligate you.

INTERNATIONAL CORRESPONDENCE SCHOOLS Box 8410, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

Why ?

A defective signal wire might easily cause just such an awful wreck as this.

Why take the chance ?

To safeguard your road against such catastrophes you should not only have the best signalling equipment but you must use

Northern Electric Railway Signal Wire

No conditions impose a severer test on wire than those used in connection with a railroad signalling system.

Northern Electric R.S.A. wire meets the R.S.A. specifications in every particular and goes a step further—it meets the more rigid Northern Electric specifications which gives you, the user, double protection.

Buy your wire and cable from the largest makers in Canada.

The Pendulum Has Served Man Well

A swinging lamp filled with oil first suggested the use of the pendulum for measuring time, and way back in the 14th century it replaced all other methods for such service. In the

Detroit Automatic Flange Lubricator (Pendulum Type)

A swinging pendulum operated by the lateral movement of the locomotive, operates the pump of a tank filled with oil and automatically forces the oil to the flanges.

Just as other methods of measuring time were discarded through the discovery of the value of the pendulum, so other methods of flange lubrication are fast being discarded through the invention of the Detroit Automatic Flange Oiler.

Man knows the Value of the Pendulum.
Send for Booklet FO-75. Its full of facts.

"JUST as I told you—the right cement floor finisher would make our concrete floors wearproof, waterproof and oilproof. Now you see why I specified

**R.I.W. CEMENT FILLER
& CEMENT FLOOR PAINT**
REMEMBER ITS WATERPROOF
REG. U.S. PAT. OFF. PATENTED AS TO PORTLAND CEMENT FEB. 27, 1906

R. I. W. Cement Filler and Cement Floor Paint seal the sandy, porous surface of concrete and cement floors and in this way stop the constant sanding, water infiltration and the soaking up of oil. And it is so easy to apply—anybody can do it perfectly. Twelve standard decorative colors. A two-coat proposition that resists wear longer than anything else we have ever seen. Don't let "cement dust" fly as the floor scuffs off or sands. Stop it immediately with an application of these wonderful preservatives, and save your machinery and stock. Write for illustrated Booklet from Dept. 56.

Westinghouse

Geared-Turbo Marine Lighting Sets

A distinct advance in the building of small direct-current units.

The units are self-contained and very compact. No expensive foundations are required. The lubricating system is entirely automatic and needs but infrequent attention, as there are no oil or grease cups to be filled. The amount of oil used is but a fractional part of that required by a reciprocating engine of equal capacity. The simple design and construction insures thorough reliability and long life.

Superintendents of Motive Power, Fuel Agents, Officials in Charge of Operation

Should investigate the merits of the Dearborn Method of Water Treatment.

It is inexpensive—costs less than any other method.

It is effective—the waters requiring treatment are analyzed, and the treatment made to meet the actual requirements.

It accomplishes—the removal and prevention of scale—stops leaks—prevents corrosion—overcomes all foaming trouble.

The benefits—life of boiler tubes greatly lengthened—expense for boiler work reduced to minimum—mileage between boiler washings increased—large saving in fuel effected by having boilers free from scale. All the troubles due to bad water overcome and service generally improved.

Experts furnished to instruct in application of treatment.

Now used on more than 100 American railways.

Office and Works: 1220-1230 Dundas Street, Toronto, Canada

Nothing New

Supt.—What's this? Another requisition for valve discs?

Foreman—Yes sir—

Supt.—The last time we ordered valve discs I thought I got enough to keep us in discs till "Dooms Day" and "here we are again"—Were the last lot stolen?

Foreman—No sir—just used up—they don't seem to last. I ran across some Anchorite Discs a while ago and got two for test—they have lasted two and a half times as long as those we have been using and are still in—the test isn't finished yet but I'd like to see a few more of those Anchorite Discs if we can afford them.

Supt.—Well—they do cost more but I'm sick of passing requisitions for discs every month so we will get Anchorite Discs hereafter and get this disc trouble wiped off the slate.

Saving \$5.87 in One Half Hour's Time

THAT is exactly the saving effected by a 15 ton Brownhoist in one half hour's time in the shop yards of a large middle western shop, loading car wheels.

At $17\frac{1}{2}$ cents an hour, hand labor may seem cheaper to use. That is what the railroad that is now using this Brownhoist used to think. On this road, loading a car with 115 car wheels, averaging 800 lbs. each, used to take 4 men, at $17\frac{1}{2}$ cents an hour, *nine hours* to load a car from a car floor height platform.

Today, this railroad by using a 15 ton Brownhoist completes this job in exactly 30 minutes, at an operating cost of \$.43.

Equipped with a lifting magnet, six wheels are lifted at a time, and the operative speed of the Brownhoist, together with its safety features, make this saving possible.

This is but one of the many jobs this railroad has effected a big saving on, by using the Brownhoist.

Our new catalog I on "Locomotive Cranes," illustrates many time and labor saving jobs performed by Brownhoists on railway work. Write for your copy.

**Quality****Service**

Courtesy in Business

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

Which is your Choice?

IF you could cut six men off your pay roll, or get one man to do the work of six, you would not hesitate in putting into effect a new system that would get this result, would you?

National Motor Trucks are increasing the efficiency of delivery systems in that ratio—6 to 1—for Railroads, Express Companies, Manufacturers, Lumber Yards and many other trades.

One big Manufacturer is making 150 calls a day with a National One-ton Truck. Every day you can see this Master Truck delivering its loads quickly, quietly and economically. The Shipping Department Schedule is always up-to-the-minute. No delays, not a cent spent for repairs since the Truck started to work—six months ago.

National Traffic Experts have a message for you. A message that will save time and money in Your Delivery Department. Write us a letter or telephone your enquiry. We will call. No obligation if you do not want to go further—after you have heard our presentation of Motor Truck facts.

Extraordinary Results With Ordinary Means

Though the equipment is inexpensive, though unskilled labor can do the work, though working conditions be far from ideal, still O-B Gas-Weld Bonds are high in efficiency.

The O-B G. W. Bond really becomes a part of the rail. The contact does not deteriorate either mechanically or electrically.

And the Bond itself is long-lived under strain.

Send for full details about O-B Gas-Weld Bonds.

Heavier Trains—Less Coal and Water Per Trip

PACIFIC TYPE LOCOMOTIVE—INTERCOLONIAL RAILWAY

Total weight of engine, 243,500 pounds; weight on drivers, 154,000 pounds; diameter of drivers, 73 inches; boiler pressure, 180 pounds; cylinders, 23½ x 28 inches; maximum tractive power, 32,400 pounds.

On a 185 mile run at an average speed of 40 miles per hour, these new Pacific type locomotives handle 10 cars and consume 12,884 pounds of coal and 9,750 gallons of water per trip.

Pacific type locomotives built five years ago, handled 9 cars on this same run at the same speed, but consumed 17,620 pounds of coal and 14,250 gallons of water per trip.

This is a saving of 26.9 per cent. in coal and 31.6 per cent. in water, with one extra car.

Accept the Opinion of Canada's Greatest Railroads

WHEN it comes to a question of Culvert selection where so much depends on experience and test, you can't do better than accept the opinion of Canada's greatest Steam and Electric Railways. Most of them give pointed approval to

Pedlar's "Perfect" Culverts

by continuing to use them whenever the need of a culvert appears. For Pedlar's Culverts give the utmost in strength and endurance and ask the least in maintenance cost. As a matter of fact there is no maintenance cost with a Pedlar Culvert, for Pedlar's Culverts will withstand the rough usage and vibration of ordinary roads for generations without the sign of deterioration or wear.

Pedlar's "Perfect" Culverts are made of anti-corrosive  that cannot crack, rust or corrode and are unaffected by frost and climatic conditions.

Shipped in sizes and lengths to suit any road requirements. The Complete Culvert Reference book No. 4 R.M. full of important data and drainage tables is free for the asking. Write for it today.

It is an Established Fact

That fireboxes of all types equipped with the Tate Flexible Staybolt show the lowest maintenance cost and highest earnings.

The Flexibility in the bolt serves to accomodate the relative expansion of plates under working operations of the fire box and boiler in a manner that has afforded less destruction to the sheets and seams than were found under conditions where fireboxes were rigidly stayed.

The Tate Flexible Staybolt is designed and made to give satisfactory results in the final measure of its usefulness, as an economic, safe and reliable factor in reducing the costs of firebox repairs and maintenance.

In use on all the prominent railroad systems of Canada.

FLANNERY BOLT COMPANY, Vanadium Building, Pittsburgh, Pa.

RESULTS COUNT

That's Why 480 Railroad Shops Are Using Thermit

Thermit offers the only sure and reliable repair for locomotive frames and other heavy sections.

The superheated liquid Thermit steel is produced in bulk and poured all at once into a mold surrounding a broken section, resulting in the perfect amalgamation of the Thermit steel with the parts with which it comes in contact. The fact that those parts are first preheated, makes the weld doubly sure.

The operation of welding locomotive frames is easily accomplished, without removing the frame from position, and with very little dismantling, no matter if the frame be broken in the splice, jaw, next to the cylinder saddle, or at any other point. The engine is returned to service in from ten to twelve hours.

Hundreds of thousands of pounds of Thermit are being used annually by railroad companies in the United States and Canada.

There is only one reason for this, and that is that Thermit produces results and we all know that "results count."

Our pamphlet No. 2144 will be of interest.

All Thermit and Thermit appliances are made in our Canadian shops.

Appearance is an Outward Sign of Prosperity

Everybody forms a COMMERCIAL RATING of everybody else by APPEARANCES. It is ASSUMED that people who DO WELL will want to surround themselves with things that LOOK GOOD. This is what WE expect in OTHERS. Why should they not expect it of us? A small investment in DURABLE APPEARANCE—the kind that does not need attention again for a long time—is GETTING THE MOST OUT OF MONEY.

Berry Brothers' Railway Varnishes

Need no introduction to experienced railway men. For nearly 60 years they have been the standard of railway varnish quality and their constantly increasing sale is undisputable testimony of their great efficiency.

If you have not already received a copy of our new catalog of Railway Varnishes, write us today, for the best catalog of its kind ever published.

Garlock High Pressure Piston Rod Packing

Is built up in rectangular form and uniform shape and exact sizes are thereby obtained.

Asbestos packing, which is rolled around a rubber core and afterwards distorted by running through a square die, does not retain its shape or size.

The best materials we can buy are used in the manufacture of our high pressure packing.

The length of service obtained from it is greater than that secured from other makes, therefore the labor cost of applying and adjusting is less.

Our packings are sold at net weights; weights of tubes and boxes are not included.

Every pound of our high pressure packing carries with it the Garlock guarantee of satisfactory and economical service.

We will promptly replace or refund the cost of any of our packings which may prove unsatisfactory to our customers.

Re-Discover The Rockies

The Transcontinental Line of the Canadian Northern Railway traverses a Section of the Canadian Rockies of exceptional grandeur, possessing characteristics absolutely distinct from those of older and more Southerly Routes.

Those who are travelling to Vancouver, whether on business or for pleasure, will find themselves well repaid for their Patronage of our Line, by the opportunity of traversing a new Section of Canada, and of recovering that thrill aroused by their first glimpse of towering Snow-Capped Peaks and Rugged Canyons.

For Literature and information apply to General Passenger Dept., 68 King St. E., Toronto, Ont., 226 St. James St., Montreal, Que., or Union Station, Winnipeg, Man.

"The Toothless Wonder"

Designed Especially to handle pipes spaced closely as in coil work. No. 2 1/2 wrench illustrated requires but three-quarter inch space between pipes.

Positive Grip instantly taken. Operates without lost motion in stroke of handle. Can be locked or released easily in any position on the pipe.

Ratchet-like Action. Successive grips can be taken without having to hold the wrench on the pipe. By a slight twist of the handle, which is round and knurled, the wrench is locked in any position.

Can't Chew. The Parmelee will make or break the tightest joints without injuring pipe or threads, as it has no teeth. The only wrench suitable for galvanized pipe.

Can't Crush. The Parmelee will grip, without crushing pipe that has become weakened by long use or exposure and separate hopelessly rusted joints, saving its cost many times over.

No Loose Battery Connections

The Columbia Hot Shot Battery is the last word in railway motor car ignition. By its use all chances of loose battery connections are eliminated.

Instead of a number of dry cells wired up in haphazard fashion you have a compact, weatherproof battery with but two binding posts. All connections are permanently soldered in place making loose connections impossible.

Columbia Hot Shot Batteries are made in several sizes and voltages. We will be glad to send descriptive literature on request.

Fire Tube Marine Superheater -- Eight Reasons Why

1. It is adaptable to either new or existing boilers of the fire tube type, and can be applied with no change in design or construction.
2. It renders possible an increase in output of boiler h.p. from a given boiler plant 10% to 20%.
3. It will produce the same power output with fewer boilers.
4. It reduces the size of the bunkers, thereby reducing the draft of the vessel with a given cargo, or making possible an increase in revenue cargo.

5. It results in a saving of fuel over saturated plants, both operating under the same draft conditions, of 10% to 20%.
6. It reduces the maintenance costs by the prevention of water hammer, leaky flanges, and condensation in the cylinders.
7. It does not prevent rapid, thorough, and frequent cleaning of the tubes.
8. Its construction provides easy access to all screwed joints and the easy removal of the parts.

1916 - 1917

Standing on the threshold of a new year, we pause to look back over the passing year. 1916 has far exceeded our expectations for volume of trade. We fully realize that your co-operation and patronage have done much to make this success possible. It is very gratifying to know that our efforts to serve and please every branch of trade, commerce and industry have been so generously appreciated throughout Canada.

Past successes are but stepping-stones to future achievements. With the New Year, our efforts shall be increased to make the DOMINION RUBBER SYSTEM of still greater service and benefit to Canadians and the industries of Canada. Our constant purpose at all times, shall be to make this the **one** safe and satisfactory place to supply every need in rubber.

To one and all, we extend the season's Greetings, and our best wishes for a Happy and Prosperous Year, with the hope that, during the coming year, PEACE may again prevail among the nations of the World.

December, 1916.

Government versus Private Ownership of Railways.

By Samuel O. Dunn

One of the most marked tendencies throughout the world during the last half or three-quarters of a century has been the tendency of governments to intervene more and more in industrial affairs. During a long period, which ended at about the time of the French Revolution, governments everywhere, and especially on the continent of Europe, were active participants in industry, and regulated closely almost every class of business which they did not undertake to manage. There then began a great and widespread reaction both in economic and political philosophy and in economic and political affairs. The leading thinkers on economic and political subjects began to teach that that government was best which governed least, and a very large amount of legislation was enacted to take governments out of business and to emancipate industrial enterprises from public control. The period during which the doctrine of *laissez faire* prevailed lasted, roughly, until the beginning of the latter half of the nineteenth century. Then the pendulum commenced to swing the other way, and it has continued to do so until now throughout the leading countries of the world governments are managing many important enterprises and are strictly regulating many which they do not manage.

In no field has this increasing tendency of government to intervene in industrial affairs been more strikingly illustrated than in the railway field. So extensive has the policy of government ownership and management of railways become that it is often represented as having grown to be the dominant policy of the world. This, however, is by no means correct. The mileage of railways owned and managed by private companies is still more than twice as great as that owned and operated by governments. In 1913, the latest year for which we have complete statistics, there were in the world 690,133 miles of railway. Of this, 464,421 miles, or 67%, belonged to private companies, and only 225,712 miles, or 33%, belonged to governments.

It is a fact, however, that North America is the great stronghold of private ownership, and that outside of this continent there is now a greater mileage in the hands of governments than in those of private companies. There are over 305,000 miles of railways in North America, and of this more than 290,000 miles, or over 95%, is privately owned and operated. In all the world outside of North America there are 385,000 miles, and of this 211,147 miles, or 55%, is owned by governments, while 174,000 miles, or 45%, is owned by private companies. It will be seen, therefore, that the mileage in North America which is privately owned and operated exceeds the total mileage owned by governments in all the world, while even outside of North America almost one-half the mileage is owned and operated by private companies.

Nor does it give a correct idea to say that government ownership has been adopted by most leading countries. Germany has adopted it, but Great Britain adheres to private ownership. Most of the railways of Austria-Hungary are state-operated, but most of those of France are still in private hands. Most of the railways of Italy and Russia are state-owned, but in the principal country of South America, Argentina, with a mileage greater than that of Italy, and in Canada, with a large and rapidly increasing mileage, private ownership is still greatly preponderant. Japan is committed to government ownership, but in the United States, which alone has a mileage exceeding that of the combined state-owned railways of the world, private management is the sole policy.

To say, therefore, as some do, that countries such as the United States and Canada should nationalize all their railways because the enlightened public sentiment of the world has decided in favor of this policy is to reason from an assumption which is not based upon facts. Furthermore, even if it were true that all the rest of the world had adopted government ownership, this would be no very forcible argument for adopting it in North America. In reasoning regarding any policy which is proposed for adoption we should give the greatest weight to the particular conditions under which it would have to be carried out. Now, the conditions, political, military and economic, which prevail in the United States and Canada are widely different from those which prevail in Europe, for example. Military considerations have been very influential in shaping the railway policy of some of the European countries, and especially Germany. The conditions which have made it desirable, or which have been regarded as making it desirable, for some of the governments of Europe to directly own their railways, so that they can be prepared to use them for military purposes at a moment's notice, do not exist on this continent, and we all hope and believe that they never will. Many of the countries of Europe which have extensively adopted government ownership are monarchies, while, regardless of constitutional forms, Canada as well as the United States is a democracy. It is hardly necessary to add that the economic conditions on this continent are widely different from those in Europe. If we on this continent are going to decide wisely on the question of private versus government ownership, we must get clearly and keep constantly in mind our own peculiar conditions, and then try to determine which policy will produce the better results under those particular conditions.

The policy of government ownership is sometimes advocated on the somewhat theoretical ground that the provision of highways is a function of the state, and that railways are highways. Of course, on this theory, it follows that railways

should be owned and managed by the government. But this argument disregards the fact that railways not only provide a highway but also carry goods and passengers. Now, this fact is of some importance, for never before the railway was invented was it considered a function of the state to become a carrier for hire, and even since it was invented governments very seldom have assumed the function of carriage except when they have become the owners and managers of railways. They provide highways for water carriers; but they do not ordinarily own the ships operated on them. They provide highways for vehicle traffic; but they do not ordinarily own the teams and wagons, the motor trucks and taxicabs which use them. While it must be conceded that governments always have provided highways, it cannot logically be concluded from this fact that the ownership and management of railways is naturally a government function. How can it be held to be naturally a government function, when about 60% of the expenses usually incurred are attributable to the service of carriage, which, on historical grounds, may be held to be within the normal scope of private enterprise?

The question of government versus private ownership has various phases, but there are two whose importance is paramount. One of these is the economic phase. Which policy will better promote the material welfare of the public—in other words, which will better promote the efficient production and the equitable distribution of wealth? The other phase which is of the first importance is the political phase. Will private ownership or government ownership have the better effects on the government of the country, and especially on that of a country having democratic institutions such as yours in Canada and ours in the United States.

Let us turn, first, to the question of which policy will more efficiently promote the production of wealth. The transportation of freight by rail, and the transportation of passengers by rail when they are travelling on business, is merely one of the processes of production. If the management of the railways is inefficient and wasteful and, in consequence, the expense incurred in furnishing the service of transportation is excessive, this reduces the efficiency and increases the cost of all the industrial processes carried on in the entire country. This remains true whether the total cost incurred in rendering the service is covered by the rates charged for it, or only part of it is covered by the rates charged and the other part of it is covered by taxes levied upon the public to pay deficits incurred by the railways. If it actually costs \$10 to move 1,000 tons of freight one mile the burden directly or indirectly imposed upon the industry of the country for the transporting of that 1,000 tons one mile is just the same whether \$5 of the cost is paid by the taxpayer and \$5 by the shipper, or

the entire \$10 is paid by the shipper.

As, in the long run, the entire expense incurred in providing the service of transportation must be borne by the industry of the country, the public welfare demands that, other things being equal, that railway policy shall be adopted which will keep this expense at the lowest practicable minimum. Now, assuming that there are certain unit costs, such as the wages of labor and the prices of materials, which must be met, and a certain standard of service which must be maintained, it is evident that that railway policy will be most conducive to economical management which is adapted to securing the ablest and most energetic administration of the affairs of the railways.

Business costs are always of two classes—return to invested capital and expenses of operation. It is as absolutely impossible to avoid incurring the one as to avoid incurring the other. If private companies are to be permanently successful in furnishing railway service they must be able to raise capital, and they will not be able to raise capital unless they are able to, and do, pay interest and dividends on it. Likewise, if a government is to provide railway service it must raise capital, and if it is to raise capital it must pay interest on it. The books may be so kept as not to show how much interest actually is paid on the investment, but because the books are not made to show the facts will not alter the facts. You might also so keep the books as not to show all the operating expenses, but this would not make the operating expenses any less.

The advocates of government ownership contend that it enables capital for the construction and development of railways to be raised more cheaply, and that it causes their administration to be more efficient than private ownership and management. Governments ordinarily can borrow money cheaper than private companies. But the total return which must be paid on the capital invested in railways does not depend merely on the rate of interest paid. The total return required on the investment in a mile of railway is determined not only by the rate of interest, but also by the amount of capital spent to produce that mile of railway. If a company would have to pay 5% for capital and a government only 4%, but the company would build a railway for only two-thirds as much as the government would spend, the total interest which the company would have to pay on the investment would be less than the total interest the government would have to pay.

Now, whether the cost of building a new railway or of improving an old one will be high or low will be determined chiefly by whether its affairs are skillfully administered. The same thing is true as to operating expenses. The situation is precisely similar to that met in other lines of business. One man builds a factory extravagantly and operates it expensively, and it is a commercial failure. Another, with perhaps less credit and financial resources, builds a factory economically and operates it efficiently, and it is a commercial success. In the railway field, as in that of manufacturing, costs of production depend upon the skill of the management; and the requisites of skillful administration are the same under government as under private management.

Probably the most fundamental and important difference between government

regulation and government ownership of railways is that under the former public officials exercise merely the authority of supervision and correction, while under the latter they exercise the authority and perform the duty of actual administration. The two functions are widely dissimilar. The main function of all regulating bodies is to make broad general rules for the guidance and control of the acts of others. The administrative, or managing, function, on the other hand, is initiating, dynamic, executive. The management of a railway system conceives projects and carries them out. It determines where it will be advantageous and desirable to build extensions and make improvements and how these things shall be done. It determines according to what ideals and standards the property shall be maintained and operated. It selects and directs the officers of all ranks. It selects, directs, trains and disciplines the employees and determines within limits fixed by law and public opinion their wages and working conditions. On its judgment, courage, energy and ability in doing these things mainly depends the success of the railways, whatever their ownership.

Whether the governments of Canada and the United States, under the political conditions which prevail in these countries, may be confidently relied on to develop and support railway administrative organizations which will manage the railways as well and economically as private companies, is open to grave question. One of the greatest difficulties met in securing the skillful administration of government concerns is that of obtaining and retaining efficient managers for them. Governments, and especially democratic governments, will seldom pay as high salaries as private concerns to get men for positions demanding first class ability. However, the honor inherent in public office is more attractive to many able and public spirited men than a large income, and therefore, in spite of small salaries, governments may often get strong men if their appointments and tenure of office are made to depend on their merits and if they are left free to do their work without political influence. But in most democratic countries, such as Canada and the United States, the appointments to important offices in the public service are usually determined chiefly by political considerations. There is hardly an officer of a railway or of an industrial corporation on this continent who does not owe his position to his experience and proved ability in his special line of work. There are few high public officials, except in the army, the navy and the courts, who do owe their positions to such qualifications.

The managers of any business, public or private, even though of great ability, cannot administer it with energy and skill unless left free from interference except on business grounds. But are the officers of government railways in democratic countries likely to be as immune from such interference as those of private railways? You have had some experience with government management of railways in Canada, and I do not understand that the higher officers of your state railways always have been appointed solely because of their qualifications or that they have always been left free from political interference. But if the managers of government railways are not to be chosen and retained solely because of their peculiar qualifications for their duties, and are not to be left free from

political interference, upon what ground can it be assumed that they will be able to develop and operate the properties so as to keep down the cost of transportation to what it would be under private management?

Political considerations tend to cause lines to be built and improvements to be made where they are not most needed to promote the economic welfare of the country. They cause men to be taken into, retained and advanced in the service largely regardless of their merits. They cause a greater number of men to be employed than are actually needed. They sometimes cause contracts to be let and purchases to be made which would not be countenanced if business principles alone prevailed. They sometimes cause passenger and freight service to be rendered, not on business principles, but to placate the voters in certain forward communities. These statements are not based merely on surmise. They can be substantiated by evidence afforded by government management of railways in many countries. Nor are those directly charged with the management of the railways to be held entirely responsible. In many cases they have fought courageously and determinedly against such abuses, only to find that their resistance availed but little.

The conclusion necessarily suggested is that, under democratic conditions at least, state railways are less likely to be efficiently and economically developed and operated than private railways. This conclusion is supported by evidence afforded by the operating and financial results of government and private railways throughout the world. There are 17 countries in the world in which the capitalization, or cost of construction per mile of the railways exceeds the average of the railways of the United States. In only six of these does private ownership preponderate, while in eleven, government ownership preponderates. The cost of construction of the Intercolonial Railway of Canada, the oldest, and until recently the largest, government-owned railway on this continent, is officially reported at \$75,000 per mile. This is about the same as the cost of the leading railways of Australia, the state railways of New South Wales. The National Transcontinental, which also has been built by the government of Canada, has cost substantially more than this. These figures greatly exceed the average capitalizations per mile of the private railways of Canada and of the United States. The average net capitalization of the railways of the United States, including all the great systems, with their numerous multiple track lines and dense traffic in the populous eastern part of the country, is only \$67,000 a mile. There are, of course, exceptions, but the general rule throughout the world is that governments invest more capital in railways to handle a given amount of traffic than private companies do.

When we turn to a comparison of the expenses of operation that state and private railways incur in proportion to the total traffic which they handle, we find facts of a similar character. The private railways of France handle more traffic in proportion to their operating expenses than do the state railways of that country. The railways of Prussia are the best state managed railways in the world, and yet the private railways of France handle more traffic in proportion to their operating expenses than do the state railways of Prussia. The private rail-

ways of Canada handle more traffic in proportion to their operating expenses than does the Intercolonial. In fact, the private railways of Canada and of the United States handle more traffic in proportion to their operating expenses than any other railways in the world, in spite of the fact that railway wages on this continent are the highest in the world. I would not undertake to maintain that private railways always are more economically managed than state railways. I do not believe that is a fact. But I am sure, after having studied the subject for a long time, that, as a rule, private management is more economical than state management.

It may be suggested that the higher expenses of state railways are due to the fact that they give better and more adequate service than private railways. But the strongest stimuli which promote the development and improvement of the service under private ownership are wanting under government ownership. The opportunity for private gain is abolished. Competition is eliminated. There is no superior regulating authority to compel the government to remedy the defects of its service. As substitutes for these influences there is a public sentiment which demands the construction of new mileage and the making of improvements, and a management desirous to please that part of the government or the public which can apply the most pressure. It does not seem probable that ordinarily the influences tending to promote the improvement of railway service under government ownership will prove to be more potent than those tending to promote it under private ownership, and, furthermore, the facts do not show that state railways ordinarily do give better service than private railways.

It may be said, and truly said, that even though it be demonstrated that it costs more to develop and operate railways under government than under private ownership, this does not make out a case, even on economic grounds, in favor of private ownership. Equity in the distribution of wealth is as important to the welfare of the public as efficiency in its production, and it may be contended that under government ownership the wages paid to labor will be higher, the passenger and freight rates charged to the public will be lower, the public instead of private companies will receive the profits earned by the railways, and, in consequence, the public, on the whole, will be better off. Let us, then, turn to a brief consideration of the relative effects which private and government ownership may be expected to have on the distribution of wealth. It may safely be assumed at the outset that under either system there will always be a struggle going on between the various classes of the community and sections of the country to determine how the burdens and benefits resulting from the development and operation of the railways shall be divided. Under either system travellers and shippers always will want low rates, labor will want short hours of work and high wages, and the owners of the railways, whether they be private capitalists or the public, will want to keep the profits large or the deficit small, as the case may be. The welfare of the public demands that this struggle shall be kept within reasonable bounds, and that at the same time it shall not be allowed to result in some of those engaged in it securing unfair privileges and advantages at the expense of the

others who are engaged in it. The only authority which conceivably can thus at once control and arbitrate the struggle is obviously the government of the country.

But the government of a country is not a mere mechanical device which automatically registers what is right and wrong, what is fair and unfair, and in the same manner issues its decrees and compels obedience to them. The government of a country is composed of ordinary men who enact and administer laws; and in a democratic country those who make and administer the laws owe their offices, and depend for the opportunity to continue in them, on the votes of their fellow-citizens. Therefore, we may be sure that under either system, the men who, in a democratic country, compose the government will always deal with matters affecting railways with some regard to their own political interests as well as with some regard to the economic welfare of the public; and the system which will be most likely to cause equity to be done between all parts of the people is that system which will tend most strongly to make it to the interest of those in office to hold the balances even as between all classes.

Under the system of private ownership and public regulation—and public regulation has become the rule wherever private ownership exists—public officials, including especially those particularly delegated to regulate the railways, occupy positions of more or less detachment with respect to railway affairs, and the pressure brought to bear upon them by the various classes and sections of the country tends to cause them to deal out approximate justice. Railways cannot be successfully developed and operated under private ownership unless those who invest in them are allowed to derive a reasonable return from their investment, and the arguments that may be marshalled and the pressure which may be brought to bear in support of making the practice conform to sound principle usually result in private railways being allowed to earn enough to raise adequate capital. There are likely to be temporary deviations from the correct practice in this respect, as we have found in the United States, but recent decisions of the Interstate Commerce Commission have shown that even in our country, where hostility to the railways has been extreme, it is by no means impossible to convince intelligent regulating bodies and the public that advances in rates are sometimes as justifiable as reductions are at other times.

At the same time, under the system of private ownership and public regulation rates and earnings are not likely to be allowed to become excessive, for, as experience has shown, and nowhere more conclusively than in Canada and the United States, those who directly pay the rates are quite capable of organizing effectively for the purpose of fighting for reasonable reductions in rates and to prevent unreasonable advances in them, and are not at all loath to do so. Similarly, the employes of private railways subject to public regulation have shown that by organizing, arguing, threatening to strike and even going to the government for legislation, they are able to get and keep their wages on quite as high a basis as the employes of other classes of concerns and even as the employes of governments themselves. Finally, where railways are privately owned public officials are pretty sure in the long run to be alert and active

in compelling the companies to contribute in the form of taxes and otherwise their fair share, if not more than their fair share, toward the support of the government.

The situation is most radically changed when railways become the property of the government. As I have said, the struggle between the various classes and communities of the country over railway matters continues under this system, but the government and the men who compose it then cease to be in a position where they can arbitrate between the various parties involved, and become directly involved as parties to it themselves. In a democratic country, such as yours and ours, the authority of the law-making body over the railways under government ownership becomes omnipotent and it can make any distribution of the burdens and benefits of railway operation that it sees fit. It may delegate the regulation and management of the railways to commissions or other officers and give to them a large amount of independence, but this is seldom done except for short periods, for no matter how much independent authority may theoretically be given to others under government ownership, it is always well known that the authority the lawmakers have given they can take away, and, therefore, there are always bound to be constant appeals from the railway managers or the railway commission to the law-making body itself. In consequence, the lawmakers, and through them the management of the railways, are bound to be constantly subjected to political pressure from all of the interested classes and communities. They will be subjected to pressure by bodies of the employes for higher wages and easier conditions of work. They will be subjected to pressure by organized bodies of shippers for low freight rates and by organized bodies of commercial travellers, workmen and commuters for low passenger rates.

There is, however, one class in the community which is not susceptible of organization, except, perhaps, very sporadically and temporarily, for the purpose of influencing government in its behalf. This class is that composed of the taxpayers. It is a much larger class than any of the others, but an organized body of voters, having a single interest which it has been organized to promote, is as much more efficient than a larger unorganized body of voters, in exerting political pressure in a democratic country as a trained body of regular soldiers is superior as a fighting body to a mob of untrained, undisciplined recruits. The consequence is that the one class which under government ownership of railways is likely not to have its interests protected by the government is the taxpayers. Most of us pay some taxes directly. All of us pay taxes indirectly. They enter into our house rent, into the cost of our clothing, into the prices of everything we eat or drink. There is no way by which their payment can be evaded, and, in consequence, the cost of living of all classes increases with the increase of taxes. Because of this increase of taxes the results of government ownership to certain persons may be different actually from what they are nominally. The passenger or shipper who may get lower rates or the employes who may get easier conditions of work, may largely, or wholly, pay for these advantages in the form of higher taxes and a higher cost of living; and for a large majority of the public the increase in their taxes and cost

of living caused by government ownership will be a net loss. Unfortunately, the taxes raised to pay the deficits incurred by state railways are usually so mixed up with the taxes raised for other purposes that those who pay them have no idea what part of them is to be used to pay the ordinary expenses of the government and what is to be used to pay the deficit of the railways.

The conclusion that the increased economic burden which will usually have to be borne by industry and by the public as a result of government ownership will be imposed mainly on the taxpayers, is supported not only by theoretical reasoning, but by the actual experience of most countries where government ownership of railways obtains. It cannot be shown that the average wages paid by state railways are ordinarily higher, under comparable conditions, than those paid by private railways, although undoubtedly under government ownership more men usually are employed to do a given amount of work. It cannot be shown that under comparable conditions the rates of state railways usually are lower than those of private railways. It is true that in Canada the rates of the Intercolonial, both passenger and freight, are relatively low, but the usual rule is that the passenger rates of state railways are somewhat lower than those of private railways, while the freight rates are somewhat higher. Considering the passenger and freight rates together, the total amount which has to be paid for the transportation of a given amount of traffic usually is relatively more on state railways than on private railways.

One thing, however, which may be conclusively demonstrated is that while private railways invariably are required to pay taxes to the public, the usual rule as to state railways is that taxes have to be collected from the public to make up deficits which they incur. One of the most extreme examples of this kind is afforded by your own Intercolonial Railway. My study of its figures, and a somewhat hasty and cursory observation of the physical property itself, have led me to believe that the Intercolonial is now being managed with an economy and skill which are a vast improvement over those shown in its management until within the last two years. Regardless of that, however, during the years from 1867 to 1914 the Intercolonial failed by \$9,600,000 to earn even its fair operating expenses. In 1914 the property was carried on the books at a cost of \$103,431,000. I had a calculation made to ascertain the total amount the road had cost the people of Canada. This was based on the assumption that, on the average, it ought to earn its operating expenses and 4% on the actual investment in it. This certainly is a conservative basis. This estimate showed that up to 1914, including the actual investment in the road and the total losses it had incurred, the road had cost the people of Canada over \$348,000,000. Assuming that it is actually worth today the cost at which it is carried on the books, its total cost to the taxpayers of Canada has been \$245,000,000 more than its present value. These losses have been partly due to the lowness of its rates, and partly to its uneconomical management; but to whatever cause they have been due, the losses have had to be borne by the taxpayers of this country.

While the case of the Intercolonial is an extreme one, it is by no means exceptional. There are some state railways which earn the interest on the total in-

vestment in them, and even more. This is true, for example, of those of Prussia and of Japan. But in Belgium, Italy, France, Norway, Sweden, Austria, Hungary, Switzerland, Russia, Australia, New Zealand, Argentina, and most other countries the state railways have on the average failed to earn their operating expenses and interest, thereby incurring deficits which have had to be borne by the taxpayers. I am aware that it can be shown that in some years the railways of some of these countries have earned their interest. I am speaking now of what they have done on the average over substantial periods, and the rule is, that over any considerable period almost every state railway in the world imposes burdens on the taxpayers, while almost every system of private railways pays taxes into the public treasury.

One question which may be raised in this connection is as to whether it is a violation of sound principle for state railways so to make their rates as to cause deficits, and thereby impose burdens on the taxpayers. It is a well known fact that the rates of your Intercolonial Railway are relatively low, and it is sometimes contended that all its losses have been due to the lowness of its rates. My study of its statistics and observation of its physical condition convince me that its losses, at least until within the last year or two, have been due more to uneconomical management than to low rates. This conclusion derives strong support from the fact that within the last two years the present management has been able to increase the earnings about \$1,600,000 a year, while actually reducing the expenses by about \$600,000 a year. But suppose its losses have all been due to the lowness of its rates. Is that a sufficient defense of them? Either those who pay non-compensatory rates and those who pay the taxes levied to meet the deficits they cause, are the same people, or they are different people. If they are the same people, what they gain by the rates is taken from them in increased taxes. If they are different people, those who pay the rates get their transportation for less than cost and those who pay the taxes pay for something they do not get. It is hard to see how anybody can be benefited by saving money through low rates and having it all taken away in increased taxes. It is also hard to find justice in giving some people low rates at the cost to others of higher taxes.

Both common sense and equity require rates to be so fixed that those who receive transportation service shall pay for it in full. The application of this principle to the situation in Canada makes it easy to decide in regard to the soundness of the rate-making policy followed on the government railways, if to it are due their losses. These railways serve only the people of the Eastern Provinces, and but part of them. The people of the entire Dominion must pay the taxes levied by the government. Therefore, if the trouble with the government railways is that their rates are too low, the few who use their service are unfairly benefiting at the expense of all the people of the country.

There is absolutely no more justification, on grounds either of economics, or of equity, for so making railway rates as not to cover interest on the investment, and then calling on the taxpayers to make up the deficit, than there would be for charging no rates at all, and calling on the taxpayers to pay both the total operating expenses and the interest. The interest on

the investment is just as clearly a part of the cost of providing the service as are the operating expenses.

The conclusion suggested by the foregoing facts and considerations, it seems to me, is that not only are private railways more likely than state railways to be so managed as to keep the economic cost of transportation down to the minimum, but that they are more likely under the system of public regulation, which now obtains almost universally where private ownership obtains, to be so managed and regulated as to promote equity in the distribution of wealth than state railways.

Let us now turn to some of the political considerations bearing on the subject. Many years ago a commission of the Italian Government investigated the subject of government ownership and reported that, in its opinion, under that policy "politics would corrupt the railroads and the railroads would corrupt politics." I have given my reasons for believing that especially under democratic conditions political considerations and political pressure are bound to exert so great an influence on the management of state railways as to cause them to produce less satisfactory economic results than would be produced by private railways. But whatever makes political considerations and political pressure exert more influence on the management of railways under government than under private ownership will at the same time make the railways under government ownership a more demoralizing influence in politics than they would be under private ownership. If it tends to demoralize the management of the railways to have men taken into and advanced in their service for political reasons, this taking them into and advancing them in the service for political reasons will also have a demoralizing effect on politics. If the giving of railway contracts for political reasons will tend to demoralize the management of the railways, it will at the same time tend to demoralize politics. If the granting of concessions to the employees for political reasons will tend to demoralize the management of the railways it will at the same time tend to demoralize politics. And so all along the line.

Now, a country with an autocratic government, such as that of Prussia, may be able to keep politics out of its state railways and its state railways out of politics. In such a country, therefore, the dictum that under government ownership "politics will corrupt the railroads and the railroads will corrupt politics" may not be true. In Prussia the suffrage is so regulated that the political influence of the different classes of the people is determined by their wealth and not by their numbers, and therefore the railway employees are almost entirely without political influence. It is in consequence of this that the government is able to, and does, prohibit them from belonging to labor unions of any kind and subjects them to a strict military discipline. But what can be done in a country having such a government, and having a people willing to submit to such a government, as Prussia, is no criterion of what can be done in a country having such a people and such political institutions as we have in Canada and the United States.

I am not sufficiently familiar with your affairs to know just to what extent politics pervades your government affairs and enterprises. I have, however, devoted much study to the results of your state railways, especially the Intercolonial, and

I have talked a good deal about the management of these roads with citizens of your country, and I have gained a very strong impression that these railways at times have played some part in politics and that politics have played some part in their management. My familiarity with affairs in the United States is greater, and certainly there is no department or enterprise of the government of my own country in which politics does not play an important part. Therefore, to assume in the United States that under government ownership the railroads would not corrupt politics and that politics would not corrupt the railroads would be to disregard practically all past experience.

One may sincerely and ardently believe that democracy is the best form of government to secure to the citizen the inalienable rights to life, liberty and the pursuit of happiness; one may have confidence that democracy can succeed in so regulating the relations between large business concerns and the public, as well as between individual and individual, as to protect the rights and further the interests of all; and yet be convinced that so far as democratic government has as yet developed in most parts of the world it is not a good form of government for managing commercial enterprises. A government to be successful in the management of very large commercial enterprises must, to a very great extent, be organized and administered as successful private business concerns are organized and administered. The fundamental requisites of successful business management cannot be altered by the simple expedient of transferring concerns from private to public ownership. Whether a business is owned and managed by a corporation, or owned and managed by the public, the owners, in order that it may be run successfully, must choose and retain the managers solely because of their special fitness for their duties. Having done this, the owners must give the managers wide discretion and authority, especially for dealing with the employees. The owners must interfere very little with what the managers do, and ordinarily must try to hold them responsible only for general results. A democratic government may successfully regulate private concerns that are thus organized, officered and managed; but few democracies have ever shown an effective disposition to have business concerns owned by themselves organized, officered and managed in this way; and until they do show such a disposition it is folly to expect them to manage railways and other great industrial enterprises efficiently and beneficently.

EDITOR'S NOTE.—The foregoing paper was read by Samuel O. Dunn, of Chicago, Editor, Railway Age Gazette, before the Canadian Club, Toronto, Oct. 30, and before the Canadian Club, Montreal, Nov. 7.

Sleeping Car Berth Rates Advanced.—

The Railway Executive Committee in Great Britain has advanced the prices for sleeping car berths as follows:—From or to London and any other English station to or from places south of Berwick and Carlisle (both stations exclusive), from 7s 6d to 10c; Berwick and Carlisle and places north thereof, from 10s to 15s.

The Grand Trunk Pacific Ry has had taken under its auspices a series of films showing the life and resources of Western Canada which will be displayed this winter over a circuit of some 4,000 moving picture theatres in the United States.

Lake Superior Corporation's Subsidiary Transportation Companies.

Following are extracts from the Lake Superior Corporation's report for the year ended June 30, 1916:

Algoma Central and Hudson Bay Ry. Co.—A settlement of outstanding questions as between the Algoma Central & Hudson Bay Ry. Co., the Algoma Central Terminals, Ltd., and The Lake Superior Corporation has been arrived at which it is believed, will lead to a speedy discharge of the receivers of both the railway company and the terminals company. A bondholders' committee, representing both railway and terminal bondholders, has been appointed, and in this committee has been vested the outstanding common stock of the railway company for the purpose of exercising all voting and other rights incidental thereto. Of the \$5,000,000 preferred shares issued to and held by the public, \$3,000,000 of a new substituted non-cumulative preference stock will be issued as fully paid to the bondholders' Committee for distribution amongst the railway bondholders and terminal bondholders. Your corporation are the holders of \$5,000,000 of common stock and subject to the voting trust referred to, will retain this holding intact and in addition will receive in satisfaction of the debt of \$318,800, a like amount of the railway company's second mortgage bonds. Monies representing the unexpended balance of the proceeds of the terminal bonds will be paid over to the bondholders' committee, for the benefit of the railway company in the development of its properties and otherwise. Both the terminal bondholders and the railway bondholders have made certain modifications and concessions as to the payment of their respective interest. Briefly, the terminal bondholders will be paid interest at the rate of 3% per annum from Aug. 1, 1914, to Aug. 1, 1915, on account of interest due for that period, as soon as practicable after the scheme becomes effective. Subject to this special payment, the interest on the railway bonds from June 1, 1914, and on the terminal bonds from Aug., 1914, together with the sinking fund on the latter, shall only be payable if and to the extent that company and the terminals company are sufficient to pay the same. After Aug. 1, 1921, 1½% shall be definitely paid on terminal bonds each half-year. Interest unpaid in any year on railway bonds and terminal bonds is to be cumulative, and is to be paid out of the joint net earnings of subsequent years.

As from June 1, 1914, joint net earnings in each year are to be applied in the following order of priority: (1) In paying interest at 3% on terminal bonds for year in question and interest at like rate for any preceding year or years so far as interest to that amount shall not have been paid, and in recouping to capital account expenditures therefrom, after Aug. 1, 1921, in payment of such interest. (2) In paying interest up to 2% per annum for the year in question to railway bondholders and interest up to a further 2% per annum for the year in question to terminal bondholders *pari passu* as if they were one class of bonds. (3) In paying interest to a further 3% per annum for the year in question on railway bonds. (4) In paying railway bondholders and terminal bondholders any arrears of interest up to 5% per annum on their respective holdings *pari passu* in propor-

tion to amount of outstanding arrears on each issue. (5) In providing sinking fund for terminal bonds for year in question. (6) In paying on railway bonds further interest up to 1% per annum for year in question and on terminal bonds further interest up to ½% per annum for year in question *pari passu* as if they were one class of bonds. With approval of bondholders' committee any part of joint net earnings not exceeding 1% on total amount of railway and terminal bonds outstanding may be carried forward to following year instead of being applied as above.

No interest or sinking fund is to be paid in respect of the securities of the railway company ranking after the railway bonds and no dividends are to be paid on railway company shares until all payments provided for as above have been made.

The guarantee of The Lake Superior Corporation still remains in full force and effect, but no holder of railway or terminal bonds is entitled to take action without the consent of the bondholders' committee or unless extraordinary resolutions at bondholders' meetings are passed. Provision is made for the re-transfer of the stock, and for the rights of the committee to cease when principal and interest of both companies' bonds have been paid in full.

Your directors in the foregoing have attempted to summarize the settlement, which is regarded as being the best obtainable in the circumstances. Through the increased activity of the Algoma Steel Corporation, and of the various industries at Sault Ste. Marie, the outlook is much better than it has been for some time. Whilst the railway company's report for the year is not yet to hand, it is understood that earnings, particularly from the steamship line, show a substantial increase. Your directors in the interests of all concerned will do their utmost to co-operate with the new management towards making the Railway Operations a success.

Algoma Eastern Railway Co.—The earnings of this Railway show an increase. During the year financial arrangements were made through which the railway has been equipped with additional rolling stock necessitated through prospective additional traffic. Patents have been received in respect of the entire land grant lands of the railway, aggregating nearly 700,000 acres. Every effort will be made to so deal with these lands as to bring about all possible benefits to the railway company, especially in a financial direction.

International Transit Co.—**Trans St. Mary's Traction Co.**—The former has been disposed of, your Corporation having received \$100,000 for its holdings of common stock. The bonds which were held by outside parties, were assumed by the purchasers. The Trans St. Mary's Traction Co.'s operations are not satisfactory. From an earnings point of view, this street railway has never been a success, and in view of additional and costly paving schemes, which have been launched by the council of Sault Ste. Marie, Mich., and to which the street railway has to contribute your directors have under consideration a sale of the property. This is one of the minor assets of The Lake Superior Corporation,

which on account of the lack of development on the other side of the river has made but little progress.

Great Northern Railway's Annual Report.

The G.N.R. report for the year ended June 30, shows that of the authorized capital stock of \$250,000,000 there has been issued and is now outstanding \$249,476,850. Of the stock unissued 17½ shares of G.N.R. stock is reserved for acquiring 14 shares of the St. Paul, Minnesota & Manitoba Ry., of which 10 shares are the in the company's treasury and four still outstanding; also under the \$19,000,000 issue, 14 shares are not paid in full and 5,200 have not yet been offered for subscription. The bonds issued and outstanding total \$194,863,909.09, against \$194,773,909.09 at June 30, 1915.

The company's investment in Canadian companies, on account of advances made to pay for property, construction, additions and betterments, has been changed during the year, as follows:—

Midland Railway of Manitoba ..Credit	\$ 3,797.72
Manitoba Great Northern Ry.	1,877.68
Crow's Nest Southern Ry.Credit	2,001.43
Vancouver, Victoria & Eastern Ry & Nav. Co.	367,404.75
New Westminster Southern Ry...Credit	20,250.27

Total \$343,233.01

The Midland Ry. Co. of Manitoba has laid .35 mile of additional industrial tracks. The New Westminster Southern Ry. Co., in March, 1916, sold the part of its line from Brownsville to Port Kells, B.C., 8.55 miles, to the Canadian Northern Pacific Ry. Co., for \$256,500. The G.N.R. continues to operate over that line under a trackage arrangement.

Following is the financial report of operations for the year:—

Operating revenues	\$81,262,478.29
Operating expenses	43,914,076.14
Net operating revenue	\$37,348,402.13
Taxes accrued	5,132,208.29
Operating income	\$32,216,193.84
Other income	2,845,627.79
Gross corporate income	\$35,061,821.63
Deductions from same	7,461,207.34
Net corporate income	\$27,600,207.34
Dividend on capital stock	\$17,456,390.00
Renewal of Allouez Big Ore stock	256,331.64
Fund for permanent improvements and betterments	3,500,000.00
Pension fund	1,000,000.00
Miscellaneous appropriations	3,100,865.27
Total	\$25,313,586.91

Transferred to profit and loss \$ 2,287,027.38

The President's report contains the following reference to one of the company's lines in Canada: "Work was recommenced upon the line of the Vancouver, Victoria & Eastern Ry & Navigation Co. between Sumas Landing and Kilgard, B.C., a distance of 9.37 miles. This line will be completed and placed in operation early in September, 1916, and will give this company a through Canadian line from Oroville to Vancouver." Referring to the work in progress or completed during the year, the President says 54% of the material required for filling on the False Creek flats at Vancouver, B.C., had been completed; and 1.87 miles of side track and spurs had been completed on lines in Canada. The most important work in progress on the company's property in Canada was the filling in of the False Creek flats and the building of the passenger station thereon.

The consolidated balance sheet shows that the company's investments in its

lines in Canada are as follows:—Midland Ry. of Manitoba, \$2,352,975.89; Manitoba Great Northern Ry., \$2,067,877.68; Brandon, Saskatchewan & Hudson Bay Ry., \$2,150,000; Crow's Nest Southern Ry., \$4,216,485.59; Bedlington & Nelson Ry., \$65,000; Nelson & Fort Sheppard Ry., \$2,119,019.51; Vancouver, Victoria & Eastern Ry & Navigation Co., \$22,248,929.23; New Westminster Southern Ry., \$250,000.

The total length of track operated by the company at June 30 was 10,468.79 miles, of which 8,052.81 miles was main track. The company operated over 305.82 miles under trackage rights and owned but did not operate 6.99 miles of the Minneapolis Western Ry. The Midland Ry. of Manitoba, 17.51 miles, is jointly owned with the Northern Pacific Ry. The Bedlington & Nelson Ry. in British Columbia, 12.58 miles, including spur tracks and sidings, was not operated during the year. The company owns in Canada through its controlled companies 167.62 miles of main track and 31.38 miles of sidings and spurs in Manitoba; and 428.08 miles of main track and 73.38 miles of sidings and spurs in British Columbia; it leases trackage rights over 41.53 miles of track in British Columbia to other companies, and leases from other companies 69.24 miles in Manitoba and 15.45 miles in British Columbia.

Americans to Build Chinese Railway.

A contract for the location and construction of about 1,000 m. of railways in China was signed Sept. 30 by the Chinese government with the Siems-Carey Railway & Canal Co., in which firm the American International Corporation is financially interested. According to the first announcement on Oct. 3 the necessary funds will be raised by a Chinese bond issue to be marketed by the American International Corporation. Reports that the probable cost will be \$50,000,000 or more are unconfirmed by the corporation, as nothing like a definite figure can be agreed upon until the lines are located and the nature of the construction determined.

According to a statement by Willard Straight, Vice President of the American International Corporation, the lines will be located by an American chief engineer who will later, on behalf of the Chinese government, superintend the construction. He will, upon the road's completion, act as its chief engineer. An American auditor and a traffic manager will also be appointed. No routes have been selected, although \$500,000 has been advanced to cover the cost of investigations and surveys. At present there are only about 6,000 miles of railway in China. The construction of the new lines, on which actual work will start in about a year, will therefore almost triple that country's railway mileage.

Siems & Carey are railway contractors of St. Paul, Minn. Last May they signed a preliminary agreement with the Chinese government for the construction of railways there. About the same time preliminary contracts for dredging the Grand Canal were concluded, and the American International Corporation, together with the Siems-Carey Co., organized the Siems-Carey Railway & Canal Co., to undertake the construction of railways and the dredging of the canal. Final agreements for the canal work are now under negotiation. The appointment of F. C. Hitchcock, formerly vice president of the MacArthur Brothers Co., to a similar position with the Siems-Carey

organization in China indicates that possibly he is the American engineer who will have charge of the work. The new contract will be handled on a percentage basis.

Intercolonial Railway Grain Elevator at St. John, N.B.

The electric plant to be built at St. John, N.B., for the Intercolonial Ry. will consist of a working house and a conveyor gallery to the wharf. The principal business of the elevator will be to receive from railway cars and to load into ocean vessels. Facilities for cleaning grain will be included in the equipment. All material used in the construction and equipment, excepting belts and ropes, will be non-combustible. The foundations will be of reinforced concrete piers, going to rock. The elevator will be 106 x 92 ft. It will be entirely of the up-house construction, with two railway tracks going through the first floor. The storage capacity will be 537,000 bush. The first story and bins will be built of reinforced concrete, with the curtain walls of first story of brick. Above the first story will be of structural steel with galvanized corrugated iron covering. The floors and roof will be of reinforced concrete.

The elevator will be equipped with three elevator legs, two for receiving grain from cars and one for shipping. All three, however, may be used for shipping. Each leg will elevate grain to the top story of the cupola and discharge to a 2,000 bush. garner. Beneath each garner 2,000 bush. scale hoppers will be erected supported on 120,000 lb. hopper scale. Each scale hopper will be arranged to discharge to distributing spouts. One of the scales will also be arranged to spout to a carloading spout. On the distributing floor a separator will be installed to receive grain from one of the scales and discharge directly to one of the bins. A passenger elevator will be installed to run between the first and top floors. Power shovel machines will be erected to unload the cars into track hoppers situated beneath the track. There will be four hoppers, two being opposite each receiving leg. Each hopper will have a holding capacity of a carload of grain. The lower end of each hopper will be equipped with a valve so designed and constructed that it will be impossible to have a valve of more than one hopper at a leg open at the same time. A 2-drum car pulled will be erected and arranged so that cars may be handled in either direction on either of the tracks. All power will be electric.

The John S. Metcalf Co., Ltd., Montreal, have prepared the plans and specifications under the instructions of C. B. Brown, Chief Engineer, Canadian Government Railways. The substructure contract has been awarded to Engineers & Contractors, Ltd., Moncton, N.B. Tenders for the superstructure were received up to Nov. 15.

At present the I.R.C. has no grain elevator in St. John, the previous one having been burned some time ago. The new elevator will be built below Prince William St., near Reed's Point Wharf.

Canadian Society of Civil Engineers.—Paul A. N. Seurot, M. Can. Soc. C. E., who has returned from France recently, exhibited and described a series of interesting photographs from the western battle front, at a meeting of the society's general section in Montreal, Oct. 19.

Birthdays of Transportation Men in December.

Many happy returns of the day to:—

E. T. Agate, M.Can.Soc.C.E., ex-Assistant Superintendent Lake Superior Division, Canadian Northern Ry., Capreol, Ont., born at Pittsford, N.Y., Dec. 7, 1874.

A. G. Albertsen, City Ticket Agent, C.P.R., San Francisco, Cal., born at Copenhagen, Denmark, Dec. 31, 1887.

J. H. Barber, M.Can.Soc.C.E., Assistant Engineer, North Toronto Grade Separation, C.P.R., Toronto, born at Cobourg, Ont., Dec. 20, 1856.

O. C. Bishop, Superintendent, Sleeping and Dining Cars and News Service, Canadian Northern Ry., Winnipeg, born at Escanaba, Mich., Dec. 10, 1876.

N. E. Brooks, M.Can.Soc.C.E., ex-Engineer of Maintenance of Way, Western Lines, C.P.R., now at Sherbrooke, Que., born there, Dec. 25, 1866.

Harold Browning, steamship agent, etc., Windsor, Ont., born at Stamford, Lincolnshire, Eng., Dec. 2, 1864.

W. W. Butler, Vice President, Canadian Car and Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., Calgary, born at Lochabar, N.S., Dec. 18, 1867.

M. M. Campbell, Building Inspector, G.T.R., Montreal, born at Bridgeton, N.B., Dec. 17, 1879.

W. C. Casey, General Agent, Passenger Department, Canadian Pacific Ocean Services Ltd., Winnipeg, born at Moncton, N.B., Dec. 12, 1882.

G. W. Caye, General Purchasing Agent, G.T.R., Montreal, born at Malone, N.Y., Dec. 1, 1865.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C., born there Dec. 6, 1859.

A. S. Goodeve, member Board of Railway Commissioners for Canada, born at Guelph, Ont., Dec. 15, 1860.

A. J. Gorrie, ex Superintendent District 1, Transcontinental Division, Canadian Government Railways, Quebec, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

W. H. Grant, Manager of Construction, Mackenzie, Mann & Co., Ltd., and General Tie and Timber Agent, and acting General Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto, born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, M.Can.Soc.C.E., General Manager, Canadian Government Railways, Moncton, N.B., born at Mifflinburg, Pa., Dec. 21, 1864.

Jas. H. Hall, President, Western Transportation Co., Ltd., Ottawa, Ont., born at Hawkesbury, Ont., Dec. 20, 1863.

J. T. Hallisey, Superintendent, District 6, Intercolonial Division, Canadian Government Railways, Truro, N.S., born at Beaver Bank, N.S., Dec. 29, 1862.

D. B. Hanna, Third Vice President, Canadian Northern Ry., Toronto, born at Thornliebank, Scotland, Dec. 20, 1858.

J. J. Hennigar, Agent Great Lakes Transportation Co., Windsor, Ont., born at Topeka, Kan., Dec. 21, 1884.

E. W. Holton, General Passenger Agent, Northern Navigation Co., Sarnia, Ont., born at Belleville, Ont., Dec. 15, 1872.

A. J. Isbester, ex Assistant District Engineer, Port Arthur District, Canadian Northern Ry., Port Arthur, Ont., born at Ottawa, Dec. 18, 1879.

R. Johnson, Assistant Locomotive Foreman, C.P.R., Hochelaga, Montreal, born at Quebec, Que., Dec. 24, 1863.

J. T. McGrath, ex-Superintendent of

Motive Power and Equipment, Chicago and Alton Rd., Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, Division Freight Agent, C.P.R., Winnipeg, born at St. John, N.B., Dec. 18, 1886.

J. M. MacArthur, Superintendent, Kenora Division, Manitoba District, Kenora, Ont., born at Toronto, Dec. 8, 1885.

A. E. Macdonald, General Claims Agent, Canadian Northern Ry., Winnipeg, born at Woolwich, Eng., Dec. 11, 1870.

L. Macdonald, Division Freight Agent, G.T.R., Toronto, born at Montreal, Dec. 10, 1871.

A. D. McTier, General Manager, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

J. C. O'Donnell, Superintendent, Districts 2 and 3, Central Division, Canadian Northern Ry., Winnipeg, born at Cobden, Ont., Dec. 17, 1879.

S. R. Payne, Manager, Ottawa Division, New York Central Rd., Ottawa, Ont., born at Jefferson, Ohio, Dec. 21, 1865.

A. Price, Assistant General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

W. J. Radford, Assistant to General Manager, Toronto Suburban Ry., Toronto, born at Boldre, Hampshire, Eng., Dec. 23, 1870.

G. D. Robinson, Export Freight Agent, C.P.R., Montreal, born at St. John, N.B., Dec. 7, 1877.

Sir Collingwood Schreiber, K.C.M.G., Hon. Mem. Can.Soc.C.E., General Consulting Engineer to Dominion Government, Ottawa, Ont., born at Bradwell, Essex, Eng., Dec. 14, 1831.

W. Tansley, Assistant Superintendent, London Division, Ontario District, London, born at Shelburne, Ont., Dec. 27, 1872.

M. F. Tompkins, Division Freight Agent, Intercolonial Division Canadian Government Railways, Halifax, N.S., born at Margaree, N.S., Dec. 6, 1878.

H. H. Vaughan, M.Can.Soc.C.E., Consulting Engineer, C.P.R., Montreal, born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Assistant to Third Vice President, Canadian Northern Ry., Toronto, born there, Dec. 1, 1883.

A. P. Walker, M.Can.Soc.C.E., Assistant Division Engineer, Ontario District, C.P.R., Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

E. H. Wood, General Car Foreman, Michigan Central Rd., Chicago, Ill., born at St. John, N.B., Dec. 30, 1880.

New Union Station for St. Paul.—The St. Paul Union Depot Co. has approved the new plans for a union station at St. Paul, Minn., and authorized the executive committee to proceed with the acquiring of land and the construction work. Plans for this union station, which involved the changing of the Mississippi River channel, were prepared over a year ago, but were vetoed by the Chief of Engineers because of improper provision for navigation requirements. The new scheme does not contemplate any change in the channel. The revised layout makes it necessary that the Great Northern, Northern Pacific, Chicago, Burlington & Quincy, Chicago, St. Paul, Minneapolis & Omaha and Chicago, Milwaukee & St. Paul railways turn in considerable land, the basis for which has already been made. Only one piece of private property remains to be taken.

Annual Passes to G.T.R. Employees.

E. J. Chamberlin, President, G.T.R., has issued the following circular:—Effective Jan. 1, 1917, meritorious or long service annual passes will be issued as follows:—To employees who have been continuously in the company's service for not less than 15 years, annual passes for themselves and, if married, to include their wives (one pass for the two persons), good over either the Eastern, Ontario or Western lines, according to the respective territory on which they may be employed. Off line employees will have the option of designating the particular territory over which their passes shall be made good. To employees who have been continuously in the company's service for not less than 20 years, annual passes for themselves and, if married, to include their wives (one pass for the two persons), good over the entire system. To head office employees who have been continuously in the company's service for not less than 15 years, annual passes for themselves and, if married, to include their wives (one pass for the two persons), good over the entire system. Ex-employees at present on the pension or superannuation funds, or who may hereafter come on those funds, will be considered, as regards length of service, the same as employees, and be accorded pass privileges as above. Female employees will be treated the same as male employees except that passes will be good for themselves only.

Snow Ploughs for Canadian Government Railways.

The 20 steel snow ploughs which Canadian Government Railways ordered recently from Canadian Car and Foundry Co., as previously stated in Canadian Railway and Marine World, will have the following dimensions, etc.:

Length, over all	32 ft. 1 9-16 in.
Width, over side sills	8 ft. 9 1/4 in.
Height, rail to top of eaves angle	11 ft. 3 in.
Height, rail to top of cupola, about	14 ft. 10 in.
Width, over wings extended	16 ft.
Extreme width, cupola	8 ft. 9 in.
Extreme length, cupola	4 ft. 11 1/4 in.
Truck centre	18 ft.
Wheel base, leader truck	4 ft. 2 in.
Wheel base, rear truck	5 ft. 3 in.
Weight, approximately	60,700 lbs.
Draft gear	Tandem springs
Couplers	5 x 7 shank, 8 1/2 in. end
Air brakes	Westinghouse, K.D. 812
Trucks (front end)	30-ton truck
Wheels	Cast steel, 28 in. diam.
Journal boxes	Tender type
Trucks (rear end)	30-ton standard
Wheels	M. C. B. 33 in.
Axles	M. C. B. standard
Brake shoes	Steel back
Springs	M. C. B. class
Brake beams	M. C. B.

The ploughs now ordered will be practically duplicate of some built some little time ago for the Intercolonial Ry., except that the large draw bar castings on the front of the plough will be extended so as to facilitate of coupling of ploughs nose to nose. The ploughs previously built did not have this feature. In addition to this modification, the side wings have been redesigned, and will have curved plates, instead of the straight plates previously used, in order that the ploughs will clear themselves more readily from the snow. The new ploughs will also have an ice cutter applied to the front truck. These cutters will be operated by air cylinders, which will remove the ice at the inside of the rails. The front operating device will also be changed and instead of being lowered and raised by air, will be raised by means of levers and springs.

Quebec Central Railway Co's Annual Report.

The annual report for the year ended June 30, 1916, signed by George Bury, President, says:—Under agreement, dated Oct. 2, 1912, approved by an Act of the Quebec Legislature, this company's property was leased to the C.P.R. Co. for 999 years, and the lease became effective Jan. 1, 1913. Interest on the ordinary stock at 4% per annum for four years from July 1, 1912, and 5% per annum in perpetuity thereafter, and interest and principal on the 4% first mortgage debenture stock, 3½% second mortgage debenture stock, and 5% third mortgage bonds, is guaranteed under the terms of the lease by the C.P.R. Co. Under the company's constitution the voting power is vested in the holders of the securities above mentioned at the rate of one vote for every £25 sterling of such stock or bonds.

Revenue Account.

	\$200,132.23

The principal officers are:—George Bury, President, Montreal; I. G. Ogden, Vice President, Montreal; J. H. Walsh, General Manager, Sherbrooke; H. C. Oswald, Secretary, Montreal; W. S. Fry, Treasurer; E. O. Grundy, General Freight and Passenger Agent; T. J. Maguire, Accountant; J. T. Reid, Superintendent, Sherbrooke.

The G.T.R. Barrie Division Railway Men's Patriotic Association has voted \$300 to the British Red Cross Association, \$300 to the Canadian Field Comforts Commissioner in England, and \$300 to the local branch of Field Comforts. The association has also sent \$500 to England to supply Christmas boxes for over 100 employees of the company, now on active service. Up to date, the association has contributed over \$17,000 for patriotic purposes.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were drawn.

General Order 173. Oct. 26.—Defining rates to be charged by railway companies for refrigerator cars for carriage of vegetables in carloads and rescinding orders 24680, Jan. 27, 1916, 24994, May 22, 1916, and General Order 152, Nov. 2, 1915.

25533. Oct. 13.—Amending order 25268, Aug. 14, re C.P.R. road diversion in Saskatchewan.

25534. Oct. 14.—Approving location and detail plans of G.T.R. new station at Port Colborne, Ont.

25535. Oct. 17.—Dismissing application of City of Hamilton, Ont., for order directing Hamilton Radial Ry. to carry out provisions of order 15241, Oct. 11, 1911, to extend Birch Ave. northerly to Gilkison St.

25536. Oct. 16.—Ordering Canadian Northern Ontario Ry. to build cattle pass on line with N. Lalande's lane, St. Genevieve Parish, Que.; approaches to grade crossing on west boundary of applicant's farm to be put in good shape, within 15 days from date; approaches to be maintained by C. N. O. R. and cattle pass to be completed by Dec. 1.

25537. Oct. 16.—Authorizing Saskatchewan Highway Commissioners to carry highway over west end of C.P.R. station grounds at Leslie.

25538. Oct. 17.—Authorizing Canadian Northern Ry. to build across certain highways in Tps. 7 and 6, r. 18, w. 2 m., Laurier rural municipality.

25539. Oct. 18.—Authorizing Toronto, Hamilton and Buffalo Ry. to open for traffic portion of its line between Dunnville and Port Maitland, Ont., 5.3 miles.

25540. Oct. 17.—Ordering that crossing in Riverdale Park, Toronto, be protected by flagman between 10 a.m. and 8 p.m. from May 1 to Oct. 31, each and every year; watchman appointed by Canadian Northern Ry.; wages to be paid, 25% by City of Toronto, 40% by C.N.R., 25% by C.P.R. and 10% by G.T.R.

25541. Oct. 17.—Ordering C.P.R. to appoint agent at Upper Kent, N.B., by Nov. 1, and to provide station facilities there by July 1, 1917.

25542. Oct. 17.—Relieving Canadian Northern Ry. from erecting fences, gates, and cattle guards along its line between mileage 62 and 70, and between mileage 71 and 72.7, Nipigon Tp., Ont., until land becomes settled or improved.

25543. Oct. 19.—Relieving Canadian Northern Ry. from providing further protection at first crossing west of Labroquerle station, Man.

25544. Oct. 19.—Authorizing Grand Trunk Pacific Branch Lines Co. to carry traffic over its Moose Jaw Northwest Branch between mileage 64.6 and Riverhurst, mileage 69.9; speed of trains not to exceed 15 miles an hour.

25545. Oct. 20.—Authorizing Canadian Northern Alberta Ry. to build a bridge across the Athabasca River in Sec. 1, Tp. 51, R. 26, w. 5 m.

25546. Oct. 21.—Authorizing C.P.R. to build spur 580 ft. long for A. Lesage, Ste. Therese de Blainville Parish, Que.

25547. Oct. 21.—Relieving New York Central Rd. from providing further protection at Larocque highway about 2½ miles south of Valleyfield station, Que.

25548. Oct. 21.—Relieving G.T.R. from providing further protection at Belfrey's crossing, about 3 miles east of Cornwall station, Ont.

25549. Oct. 19.—Authorizing C.P.R. to build spur for Canadian Consolidated Rubber Co. and Campbell, Wilson & Horne, Calgary, Alta.

25550. Oct. 18.—Authorizing Niagara, St. Catharines & Toronto Ry. to build trestle over its main Port Dalhousie Line, and siding for McKinnon Dash Co., St. Catharines, Ont.

25551. Oct. 20.—Approving agreement between Bell Telephone Co. and Union Telephone Co. Oct. 6.

25552. Oct. 18.—Amending order 25338, Aug. 21, re Toronto, Hamilton and Buffalo Ry. crossing of G.T.R. and Hamilton Radial Ry., Eurlington, Ont.

25553. Oct. 20.—Authorizing Grand Trunk Pacific Branch Lines Co. to build three sidings adjacent to its Moose Jaw Northwest Branch across road allowance between Secs. 25 and 26-22-7, w. 3 m., Sask.

25554. Oct. 20.—Authorizing City of Sault Ste. Marie, Ont., to build highway crossings over C.P.R. at Tancred and Francis Sts.

25555. Oct. 24.—Granting relief from provisions of order 16900, June 27, 1912. This order relating to the omission of symbols from class freight rate tariffs was published in full in Canadian Railway and Marine World for November, pg. 450.

25556. Oct. 25.—Authorizing C.P.R. to build siding for Canada Metal Co., Toronto.

25557. Oct. 24.—Authorizing Canadian Northern Ontario Ry. to build spur for Haight & Dickson Lumber Co., Wisner Tp.

25558. Oct. 20.—Ordering that crossings of highway by G.T.R. and C.P.R. at Dorval, Que., be protected by watchmen on each line between 6 a.m. and 7 p.m. daily; cost of protection reserved; watchman for C.P.R. to be appointed by C.P.R., and for G.T.R. to be appointed by Town of Dorval.

25559. Oct. 25.—Authorizing C.P.R. to build spur for Kennedy Construction Co., St. Francois de Sales Parish, Que.

25560. Oct. 24.—Amending order 25264, Aug. 15, re Canadian Northern Ry. spur to water front, Port Arthur, Ont.

25561. Oct. 20.—Approving agreement between Bell Telephone Co. and Shamrock & Renfrew Telephone Association, Renfrew, Ont., dated Apr. 1, 1913.

25562. Oct. 23.—Amending order 25256, Aug. 10, re Grand Trunk Pacific Ry. station at Riverhurst, Sask.

25563. Oct. 26.—Dismissing complaint of H. R. Moodie, Golden, B.C., against C.P.R. placing gates and fences at Second St. crossing at Golden.

25564, 25565. Oct. 25.—Approving Great Northern Ry. Standard Freight Tariffs C.R.C. 1251 and 1244, covering rates between stations on lines in B.C.

25566. Oct. 27.—Authorizing Three Rivers Traction Co., to build across C.P.R. Wayagamack spur, in Cap de la Madeleine Parish, Que., trains and cars of both companies to stop and not proceed over crossing until one of trainmen has gone ahead and signalled way clear.

25567. Oct. 25.—Authorizing G.T.R. to build two branches for Toronto-Hamilton Highway Commission, New Toronto, Ont., and to remove existing track.

25568. Oct. 25.—Approving plans and specifications of Bauslaugh Creek drain under G.T.R. in South Norwich Tp., Ont.

25569. Oct. 28.—Authorizing Canadian Northern Ry. to build interchange track for C.P.R. at Moose Jaw to cross Moose Jaw Electric Ry. at Tenth Ave.; to be protected by half interlocking plant and to build transfer track over Main St., and 10th and 11th Aves. and along Home St.

25570. Oct. 27.—Authorizing Lake Erie and Northern Ry. to build interchange track with Toronto, Hamilton and Buffalo Ry. and G.T.R. at Brantford, Ont.

25571. Oct. 26.—Amending order 25483, Sept. 29, The Canadian Northern Ry. location and building of two sidings at Port Arthur, Ont.

25572. Oct. 27.—Relieving C.P.R. from further protection at crossing of Elmhurst Ave., east of Montreal West station, Que.

25573. Oct. 24.—Approving Hull Electric Co.'s plan 150-2-2, showing standard pilots and fenders.

25574. Oct. 27.—Authorizing Canadian Northern Ry. to build extension spur from Winnipeg Transfer Ry. for J. H. Ashdown Hardware Co., Winnipeg.

25575 to 25578. Oct. 27.—Approving Bell Telephone Co. agreements with Massey Station Telephone Co., Oct. 12, 1916; Millbrook Rural Telephone Co., Oct. 14, 1916; Ardrea Telephone Association, Feb. 6, 1915, and Ontario Department of Lands, Forests and Mines, Oct. 12, 1916.

25579. Oct. 27.—Ordering G.T.R. to install improved type of automatic bell at crossing just north of milepost 109, Island Pond and Richmond Subdivision, Ascot Tp., Que.

25580. Oct. 28.—Ordering C.P.R. to erect three-car stock yard at Etzicom, Alta., by June 1, 1917.

25581. Oct. 31.—Authorizing G.T.R. to build spur for Hamilton Steel Wheel Co., Hamilton, Ont.

25582. Oct. 30.—Approving agreement between Bell Telephone Co. and Wilberforce Rural Telephone Co., Renfrew County, Ont., Oct. 19.

25583. Oct. 30.—Relieving C.P.R. from providing further protection at crossing east of Louiseville, Que.

25584. Oct. 31.—Authorizing Mount Royal Tunnel & Terminal Co. to connect temporarily with Jacques Cartier Union Ry. near Jacques Cartier Jct., mileage 5.01, from Dorchester St.

25585. Oct. 30.—Dismissing complaint of C. A. Bowlby and others of Port Medway, N.S., alleging excessive rates charged by the Halifax and South Western Ry. from Halifax to Medway station.

25586. Oct. 30.—Ordering C.P.R. to provide automatic bell at crossing of road allowance between Lots 22, Con. 1, and 22, Broken Front Concession, Darlington Tp., Ont.

25587. Oct. 31.—Authorizing C.P.R. to cross the road allowance between Secs. 33 and 34, Tp. 8, R. 30, w. 2 m., and to close road allowance in Sec. 33, Tp. 8, R. 30, w. 3 m., Sask.

25588. Oct. 31.—Authorizing Alberta Public Works Department to build highway crossing over C.P.R. in Sec. 11, Tp. 40, R. 27, w. 4 m.

25589. Oct. 31.—Authorizing G.T.R. to build extension to siding for Brown Brass Rolling Mills Co., New Toronto, Ont.

Railway Mechanical Methods and Devices.

Oxy Acetylene Welding in Montreal Tramways Co's Shops.

Oxy acetylene welding is being used to very great advantage in the Montreal Tramway's Co.'s shops at Youville, Montreal, and many worn parts and castings that would otherwise be scrapped are

to standard dimensions, although on the shaft shown in the illustrations the journal has not been touched.

Fig. 3 shows a crank case. Although they are not subject to an excessive strain, and rarely break, it will serve as an example of the many uses and odd jobs to which the welding process adapts itself. This case was cracked in two

Locomotive Flange Oiling to Save Rail Wear on Curves.

A committee report presented at the Traveling Engineer's Association's annual meeting recently calls renewed attention to the advantages of flange oiling of locomotive driving wheels in saving

Fig. 1. Repairs to Worn Shoulder on Axle Bearing Cap.

Fig. 2. Repairs to Armature Shaft.

Fig. 3. Repairs to Air Compressor Crank Case.

built up, giving longer service. Fig. 1 illustrates the building up of the shoulder on an axle bearing cap which acts as a key to prevent the axle bearing from turning. From the excessive vibration to which motors are subject, these shoulders become worn, allowing the bearing to loosen. The corners are filled up with new metal and machined out to the origi-

places and a new one would have cost many times the price of repairing.

Perhaps the largest saving occurs in the repairing of truck and motor frames. These large steel castings, with a great deal of machining, are very expensive. The work shown in progress in Fig. 4 is a Westinghouse 101 motor frame, from which the long gear case lug has been broken. A new end is lined up with two bars to register the holes properly and then welded to the frame, which has previously been cut off by the torch to the correct length.

Among other routine jobs in equipment maintenance for which the welding process is used at the Youville shops are filling worn dowel holes in bearing caps, repairing cracks in motor and truck frames, renewing wearing points of steel brake heads, filling worn pedestals of

rail wear. The committee states that on the Erie Rd.'s New York, Susquehanna & Western Division the rail wear on curves has been reduced two-thirds by the use of flange oilers on the locomotives. The committee also believes it to be fully demonstrated that the flange oiler tends to prevent derailments. A number of railways reported that before applying flange oilers they had considerable trouble with wheels climbing the rails on sharp curves, but this trouble has been eliminated since flange oilers have been applied.

For success in the use of the flange oiler a very heavy asphaltum oil must be used. The oil should contain 40 to 60% of asphaltum in solution and be low in grease and paraffin. This heavy oil acts as a lubricant between the wheel flange and the head of the rail when a lighter oil would be forced out. Further than this, the heavy asphaltum sticks to the flange and will not work over on to the tread of the driving wheel, as will an oil with a paraffin base.

From an operating point of view, the saving in tire turning is even more important than the saving in rail wear. The committee estimates that the cost of tire metal used up, labor and loss of locomotive service every time a 6-driver locomotive has to go to the shop for turning tires on account of sharp flanges represents an outlay of \$219. The committee also states that where freight locomotives not equipped with flange oilers will run 9,000 to 12,000 miles before requiring shopping to have their tires turned, they will run between 25,000 and 42,000 before shopping if equipped with flange oilers. In passenger service, locomotives that have to be shopped every 15,000 to 25,000 miles should run 60,000 to 80,000 miles if equipped with flange oilers.

Foley, Welch & Stewart, railway contractors, Vancouver, B.C., have denied that they have contracted with the Russian Government for the construction of 3,000 miles of railway, as reported from Ottawa recently.

Fig. 4. Welding New Gear Case Lug on Motor.

nal dimensions, thus saving an expensive casting.

Fig. 2 shows an armature shaft on which a new pinion fit has been built up, which is a very frequent job on the older types of motors. They become worn from frequent changing of pinions, and occasionally from loose pinions. Frequently the journal also is built up and re-turned

truck and journal boxes, filling bolt holes where they have to be re-drilled. There are also many details of shop and manufacturing work which can be done by the welding process much cheaper than by any other method. We are indebted for the foregoing information and the photographs to Keith MacLeod, Engineer of Equipment, Montreal Tramways Co.

Grease Press in C.P.R. Locomotive Shop.

There are a great many places in an erecting shop where a grease press can be used, particularly where great force is required to loosen locomotive frame bolts when it is impossible to drive them out on account of lack of space. The press used in the C.P.R. locomotive shops at North Bay, Ont., which is illustrated herewith, occupies when closed $4\frac{1}{2}$ in. of space and accomplishes its purpose when bolts would otherwise have to be drilled out. For changing locomotive springs and setting rods in close quarters the press is most useful.

The body of the press is made from steel forging drilled out to dimensions shown on the accompanying illustration. The piston is of cold rolled steel, fitted

Tests of Locomotive Fuel Coal.

One of the largest of the mikado type of freight locomotives is being mounted in the locomotive testing laboratory, Engineering Experiment Station, University of Illinois, for an extended series of tests. The Experiment Station has entered into a co-operative arrangement with the International Railway Fuel Association and the United States Bureau of Mines to conduct tests with various sizes and grades of coal used for fuel. The Baltimore and Ohio Rd. has loaned one of its newest freight locomotives, which weighs with its tender 464,000 lbs. The testing laboratory is designed to permit the locomotive to be operated at any desired speed and at any power output, under the same conditions as prevail in practice, while its performance is recorded by

these tests will establish information which will enable a railway to determine how much it can afford to pay for the different grades and sizes of coal, and which grades and sizes will produce the best results under given operating conditions.

The Russian Government is reported to have ordered 50,000 tons of steel rails in the U.S. for the Trans-Siberian Ry.

The first G.T.R. train to run between Montreal and Toronto, arrived at Montreal, from Toronto, Nov. 27, 1856, and occupied 14 hours on the trip.

C.P.R. Office Changes in Winnipeg.—The Motive Power Department offices have been removed from Weston shops to the station, and the mechanical and fuel accounts offices have been removed from the station to Weston shops, to the rooms

Grease Press, Canadian Pacific Railway Locomotive Shop.

with leather cup washer at the bottom, and has a stroke of 3 in. The bushing in which the threaded plunger works is made of case hardened steel, because with a softer material the thread would be liable to tear out after it had become partly worn. The press described was made by Wm. Wells, General Locomotive Foreman, C.P.R., North Bay, to whom we are indebted for the foregoing information.

Timiskaming & Northern Ontario Ry.—Passenger earnings for September, \$66,762.03; freight earnings, \$95,895.19, total earnings, \$162,657.22, against \$52,238.17 passenger earnings; \$93,359.72 freight earnings; \$145,597.89 total earnings for Sept., 1915.

C.P.R. Ontario District Employees contributed another \$900 to the Toronto and York County Patriotic Fund recently, making a total of \$10,850 sent to this association since Sept., 1915.

means of automatic equipment for measuring tractive effort, water consumption, fuel consumption, smoke production and other factors which will enter into the investigations. The locomotive has 8 driving wheels, each carrying a load of 28,000 lbs., 2 pony truck wheels and 2 trailer truck wheels. It carries a steam pressure of 190 lbs. per square inch, and has a firebox 7 ft. wide and 10 ft. long, is 85 ft. long and delivers a pull or tractive effort of 54,500 lbs. at its drawbar.

Samples of coal to be used will be taken from Illinois mines and will be graded according to present commercial sizes, ranging from the so-called slack and run of mine up to the commonly used 8 x 6 lump. Later, it is contemplated, tests will be made with a coal ground to an impalpable powder or flour, which will be injected into the firebox by a specially designed blower. Tests will be made with both hand firing and automatic stoker firing. It is the expectation that

heretofore occupied by the Motive Power Department.

Railway Employees and the High Cost of Living.—A number of railway employees at North Bay, Ont., have associated together with a view to reduce the cost of food supplies by co-operation. A committee was formed to handle purchases, which were generally made in carload lots, with the result that a saving of about 30% on all commodities purchased has been made.

G.T.R. Employees in Active Military Service.—It is announced that 180 of the company's employees have been killed in action or have died from wounds received on active service. In addition several are reported missing and wounded. The total number of employees who have enlisted is over 3,000 from all grades. If any employee is killed in the course of the war, the company's insurance fund pays the same amount to his relatives, as though he had remained in his usual employment.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Cascade Scenic Ry.—We are officially advised that the surveys for this projected railway have been completed, and that it is the present intention to start construction early in next spring. T. C. Deacon, M.Can.Soc.C.E., Winnipeg, is the person principally interested. (Sept. 1915, pg. 348.)

Dominion Government Ry. to Hudson's Bay.—Construction on the railway from Pas to Port Nelson, Man., is reported suspended for the winter. Track has been laid to the Kettle Rapids of the Nelson River, 330 miles from Pas. During the winter, however, work will be gone on with on the erection of the bridge at Kettle Rapids, and upon another bridge further on. It is expected to lay track to Port Nelson early next summer. Work on the terminals at Port Nelson is also reported to have been suspended for the winter. (Nov. pg. 447.)

Esquimalt & Nanaimo Ry.—R. Marpole, Vice President, E. & N.R., and General Executive Assistant, C.P.R., is reported to have said in Victoria, B.C., Nov. 11, with reference to the Johnson St. bridge matter, that the C.P.R. intended to administer the railway as it found conditions, and was not going to be driven from what was thought right by a desire to cater to Victoria civic politics. Pressure had been brought to bear upon the company to modify the terms of participation in the scheme. The company's stand had always been definite and specific and it was not its fault that there had been delays and changed policies. The question at issue has to do with the provision of general traffic facilities at the E. & N.R. Johnson St. bridge, in connection with the opening up of the Songhees reserve for railway and general purposes. The city desires that these facilities be provided, and is trying to have the matter arranged.

Grand Trunk Ry.—G. Mountain, Chief Engineer, Board of Railway Commissioners, visited Brantford, Ont., Oct. 27, to inspect several crossings over the G.T.R. which the city is desirous to have eliminated. Arrangements were made for the reduction of speed of trains at the Market St. crossing; the erection of a semaphore at the Clarence St. crossing, the maintenance of which is to be apportioned between the city and the company by the Board of Railway Commissioners; and for the putting in of a subway at the St. Paul's Ave. crossing, provided the Board decides that this is the only way protection can be given. (Nov., pg. 447.)

The timber overhead bridge at Watford, Ont., is being replaced by a steel structure. In connection with this work there is a considerable amount of grading and filling to be done.

Great Northern Ry.—A U.S. press report states that the G.N.R. is considering plans for the electrification of its lines running into Vancouver, B.C., as well as other lines in Washington. So far only an official statement has been made in respect of the lines converging on Seattle, Wash. This work is expected to take three years to carry out, and it is stated that hydro electric power will then be developed in the Hope Valley district for use on the lines converging on Vancouver.

It is expected that the company's new station building on the False Creek flats, Vancouver, will be ready for occupancy, April 1. The building is 375 ft. east of Main St., and just north of the Main St.

bridge. It is an L-shaped structure, the main building being 230 x 61 ft., and the bottom of the L being a one story building in which will be located the baggage room, mail room, express office, trainman's room, etc. East of this again will be the boiler house, which will supply heat to the whole building. The main building faces Main St., and the centre part, 100 x 60 ft., will form the general waiting room and will be the full height of the building. Each of the wings, 65 x 50 ft., will be two stories high. The ground floor will be devoted to the necessary public purposes of a terminal station, and the upper floors will be offices for the G. N. R. and the Northern Pacific Ry., which will use the building jointly. The building will be of reinforced concrete faced with pressed brick, and with terra cotta trim. The main waiting room will lead out to a covered concourse the whole length of the building, giving access to 11 sets of tracks. (Nov., pg. 447.)

Intercolonial Ry.—We are officially advised in respect to a press report that a second track was being built on the main line between Cortland St. and the National Transcontinental Ry. yard at Moncton, N.B., that what is being done can hardly be called a double tracking of the line. The line being laid is intended to be used as a switching lead between the Moncton yard and the N.T.R. yard, a distance of 2,800 ft. The work is being done by the Government Railway forces, and it is expected it will be finished by Dec. 15.

A press report states that two or three new sidings are to be laid on Ballast Wharf, St. John, N.B.

We are officially advised that the contract for the construction of the substructure of the new grain elevator at the St. John, N.B., terminals has been let to Engineers and Contractors, Ltd., Moncton, N.B. (Nov., pg. 447.)

Lachine, Jacques Cartier & Maisonneuve Ry.—Application is being made to the Dominion Parliament for an extension of time for the construction and completion of the line authorized by sec. 1, chap. 93 of the statutes of 1914. This company is a G.T.R. subsidiary, and W. H. Biggar, K.C., is solicitor for the applicants.

Pacific Great Eastern Ry.—Various reports state that track laying is being proceeded with from Clinton north-easterly, and that grading and other work is in progress from Squamish to Fort George, B.C. This is the section of the line which it is desired to complete as early as possible. Track was laid into Clinton in 1915, and trains from Squamish have since been in operation. With some small exceptions the grading was completed into Fort George. It is not, however, expected to have the track laid to Fort George this season.

A press report states that a contract has been placed in the United States for the delivery early in 1917 of 27,000 tons of steel rails.

We are officially advised that the following buildings are being erected this year:—At Squamish, locomotive repair shop, 80 x 150 ft.; frame construction with concrete pits; store houses, 60 x 80 ft., frame construction; track scales, 50 ft. platform, timber supports, concrete foundations. At Lillooet—four stall locomotive house and bunk house, 24 x 56 ft., both of frame construction. In addition to these frame section houses are to be

erected at Squamish, mileage 25.26; Mons, Pemberton, Birken, D'Arcy, Shalalth, Lillooet, Parilhon, Lough Rayment and Clinton. (Nov., pg. 447.)

Prince Edward Island Ry.—It is reported in Charlottetown, P.E.I. that it is expected to have the car ferry connection between P.E.I. and the New Brunswick mainland ready for operation by Dec. 31. The car ferry terminals are at Carleton Point, P.E.I., and Cape Tormentine, N.B. The apron at the dock at the latter point was reported practically completed Nov. 9, and everything was ready for the installation of that at Carleton. Sidings and other accommodation at Cape Tormentine are well advanced to completion, and at Carleton, both standard and narrow gauge tracks have been laid on the landing pier. The standard gauge cars will be run on to the pier, for loading and unloading to and from the P.E.I.R. narrow gauge cars during the changing of the gauge to the standard.

Peace River, McKenzie & Copper Mine River Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway from Sawridge, on the Edmonton, Dunvegan & British Columbia Ry., north of the east end of Lesser Slave Lake, to Buffalo Lake, thence on the south side of Peace River to Vermillion and the Chutes, crossing the river at the falls and continuing northerly to the foothills of the Caribou Mountains, then northeasterly to the Little Buffalo River, and on by the valley of that and the Salt River to Bell's Rock, on Great Slave Lake, about 50 miles. Pringle, Thompson, Burgess & Cote, Ottawa, are solicitors for the applicants.

Quebec & Saguenay Ry.—When work was stopped on this line from the point of junction with the Quebec Ry., Light & Power Co.'s Ry. at Cap Tourmente, Que., in 1912, the line was about 95% graded to Pointe au Pic, near Murray Bay, Que., 50 miles. Since that date considerable washouts and slides have occurred, and these will have to be repaired before any tracklaying can be done. The contractors are now at work on the track where these washouts and slides took place. The line being now about to become Government property, the ties for the line, to which reference was made in our November issue, are being purchased through R. W. Simpson, General Fuel and Tie Agent, Canadian Government Railways. Tenders for track and switch ties, according to the C.G. Ry.'s specifications, have been called. The construction work on the line is being carried out under the charge of A. Dick, Division Engineer, Quebec.

The line starts at Cap Tourmente, 30.5 miles from Quebec, which mileage has been acquired from the Quebec Ry., Light & Power Co., and extends to Nairn's Falls. Track has been laid on the line from Pointe au Pic to Nairn's Falls, 7.31 miles, leaving the 50 miles from Cap Tourment to Pointe au Pic to be completed. (Nov., pg. 447.)

St. John and Quebec Ry.—The section of this railway now under construction from Gagetown to Westfield, N.B., runs down the St. John River Valley, about 200 yards from the right bank of the river. The connection with the C.P.R. near Westfield is below Pamomkeag, at Westfield Beach. A supply line of railway has been built from Westfield Beach to the Nerepis River. The contractors and sub-

contractors engaged on the work are:—Kennedy and MacDonald, Westfield, N.B.; Smith and Matthew, Westfield; Poupore Brothers, Quebec; O'Gorman and Lynch, Gagetown; Loney Brothers; Chisholm and McDonald; G. Kennedy; S. Herbert Mayes, St. John, N.B.; R. Roberts and Son, St. John. (Nov., pg. 447.)

Toronto City Industrial Sidings.—A general rearrangement of industrial spur tracks in the industrial area which is being developed east of Cherry St., Toronto, under the Toronto Harbor Commissioners' plans has been approved by the Board of Railway Commissioners. The plans provide for the removal of the existing line from the corner of Lake and Cherry Streets, southerly alongside Cherry St., and easterly across the Don River to a

junction with the tracks laid under the Board of Railway Commissioners' order of Sept. 9, 1915, together with all sidings and spurs along the route. This is to be replaced by a new line, so arranged as to give one line along the front of the sites at present occupied for industrial purposes, and another along the western front of the Don diversion channel, with connecting sidings and industrial spurs. The greater part of the work is to be done at once, but provision is made for putting in two additional connections between the two frontages as they may be required upon development of the property. The total length of track covered by the plan is about two miles. E. L. Cousins is Chief Engineer and Manager for Toronto Harbor Commissioners.

Railway Rolling Stock Notes.

The C.P.R. has received 104 box cars from its Angus shops.

The Canadian Northern Ry. has received 150 box cars from Haskell & Barker Car Co.

Canadian Government Railways have received one steel sleeping car from National Steel Car Co.

The Eastern Car Co. is shipping the first delivery of 300 box cars for the Paris & Orleans Ry. of France.

The Michigan Central Rd. has received 150 steel underframes, 50 tons capacity, for flat cars, from Canadian Car & Foundry Co.

The Minneapolis, St. Paul & Sault Ste. Marie Ry. has ordered 800 box cars and 200 automobile cars from Haskell & Barker Car Co.

The Michigan Central Rd. is reported to have placed orders for 6,750 freight cars, at an approximate total cost of \$9,000,000.

The C.P.R. is said to be contemplating building or ordering some Pacific type locomotives which will be the largest in Canada.

The Delaware & Hudson Co. is in the market for 118 steel underframes for hopper cars, 25 steel underframes for stock cars and 25 for refrigerator cars.

It is reported that the Russian Government is expected to place additional contracts shortly for 400 decapod locomotives, and that about 60 of them will be built in Canada.

Sir John Eaton, Toronto, has received a new private car built by Pullman Co., Chicago. It is named Eaton, the same as his former car, which was burned some little time ago.

The Italian State Railways have ordered, in the United States, 40 consolidated locomotives, with cylinders $21\frac{1}{4}$ x $27\frac{1}{2}$ in., driving wheels $53\frac{1}{2}$ in., and a total weight, equipped with superheaters, of 147,000 lbs.

The Minister of Railways has announced that arrangements have been made for the conversion of a number of passenger cars into hospital cars for use on the Intercolonial Ry., for transporting the more serious cases of wounded soldiers from the seaboard to convalescent homes and hospitals.

Six Mallet locomotives, built by the C.P.R. at Angus shops, Montreal, 1 in 1909 and 5 in 1911, and all of which have been in service in the British Columbia mountains, are, on account of their high cost of maintenance, being rebuilt at Angus shops into 2-10-0 decapods, 2 having

been completed and 3 more being under way. Their numbers will be 5750 to 5755.

The British Government has increased to 395 an order placed in the U.S. recently for 45 narrow gauge, 4-6-0 tank locomotives, and it is reported that it is also increasing another order placed in the U.S. for 100 tank locomotives, 2-6-2 type, to make the total number to be built 200 or 250.

The Russian Government is reported to have ordered 20 decapod locomotives from Canadian Locomotive Co., 40 from American Locomotive Co., and 40 from Baldwin Locomotive Works. The enquiries originally covered 600 locomotives, and it is anticipated that further orders will be placed later.

A Paris press dispatch says the shortage of freight cars was discussed in the Chamber of Deputies, Nov. 14, when Colonel Gassouin, head of the War Ministry's railway branch, said the delivery of cars which had been ordered had been delayed, but that it was expected 2,000 cars would be received monthly. Other measures were also being taken to improve the freight car service.

The Quebec Central Ry. has ordered 100 wood box cars, 30 tons capacity, from Canadian Car & Foundry Co. They are being built at Amherst, N.S. Following are the chief details:—

Length over end sills	36 ft. 9 $\frac{3}{4}$ ins.
Width over side sills	9 ft. 0 $\frac{1}{4}$ ins.
Width inside	8 ft. 6 $\frac{1}{2}$ ins.
Length inside	36 ft.
Height, top of floor to under side of earline ..	8 ft.
Height, top of rail to top of running board	13 ft. 3 $\frac{3}{4}$ ins.
Height, top of rail to centre line of coupler	2 ft. 10 $\frac{1}{2}$ ins.
Side door opening	7 $\frac{1}{2}$ by 6 ft.
Bolsters	Simplex
Couplers	M.C.B. 5 by 5 in. shank
Draft gear	Tandem spring
Air brakes	Westinghouse
Trucks ..	30 tons standard diamond arch bar type
Wheels	M. C. B. 33 ins.
Axles	M.C.B. 4 $\frac{1}{4}$ by 3 in. journal
Journal bearings	M.C.B. lead lined
Journal boxes	M.C.B. cast iron
Brake beams	Simplex
Brake shoes	M.C.B. cast iron

The gas-electric car which the Canadian Northern Ry. is putting on the line on Vancouver Island, between Patricia Bay and Victoria, was formerly operated on the Quebec & Lake St. John Ry., between Quebec and Lake St. Joseph. It is self propelled by electric motors on the forward truck, receiving their energy direct from a 375 h.p. generator in the forward compartment of the car, direct connected to a 6 cylinder gas engine. The car is 54 ft. long, with seating capacity for 76 passengers, and it is capable of attaining a speed of 55 miles an hour. When

operating in Quebec it made four round trips daily, or a total of 175 miles, and the actual operating cost was 16c. a mile, exclusive of repairs. The car was fully described and illustrated in Canadian Railway and Marine World for April and May.

Proposed Postponement of Toronto Railway Viaduct.

A proposition was laid before the Toronto City Council recently by the railway companies interested with respect to the water front viaduct, the building of which has been directed by the Board of Railway Commissioners. It was suggested that the carrying out of the board's order be suspended for 15 years, and that certain bridges be built which would eliminate dangerous crossings. The railways state that the saving of interest charges on the cost of the construction of the viaduct for 15 years would more than pay for the work which it is proposed to do at present. At the expiration of the period the temporary bridges could be scrapped and the plans as approved by the Board of Railway Commissioners carried out.

The proposal of the Toronto Terminals Ry., which has the matter in hand for the C.P.R. and the G.T.R., was as follows:—"We will build at our own expense overhead bridges over the tracks on Bay and Yonge Sts. and connect these by a viaduct running at right angles to them on Lake St., so that the cars could run down one street and come up another, and we will also reconstruct the York St. bridge to adapt it for street railway traffic, if the city will consent to an amendment to the viaduct order striking out the time for commencing and completing the structure and all other details in connection with it."

The reason given for desiring a postponement of the work was that of financing such a big project. The erection of the new union station involves the expenditure of \$7,000,000, and money is required for other works on the different lines in Canada. It is also urged that conditions are not favorable for the city to finance the expenditure it would have to incur in connection with the carrying out of the viaduct plans.

The proposition as outlined to the city council is to build three bridges from Front St down York St., Bay St. and Yonge St., to the proposed marginal way which the Toronto Harbor Commission proposes to construct. The bridge at York St. would be a continuation of the existing structure, but the other two would be entirely new. The gradients proposed would be less than 3%.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association contributed as follows, for patriotic purposes, up to Aug. 31,—subscriptions to Red Cross, \$8,973.92; to Canadian Patriotic Fund, \$15,974.79, and donations to enlisted employees, \$7,785.43, a total of \$32,734.14. These amounts are additional to many personal subscriptions for considerable amounts made direct by members of the Commission and employees.

M.C.B. Tank Car Specifications.—Owing to labor difficulties and to delays in deliveries of materials, the Master Car Builders' Association's executive committee has extended the time for the coming into force of the Association's tank car specifications for class 3 and 4 tank cars, for 60 days, the effective date now being Mar. 1, 1917.

Mainly About Railway People Throughout Canada.

Mrs. Sinclair, wife of Angus Sinclair, railway contractor, Toronto, died there, Nov. 2, after a long illness.

Lord Shaughnessy had luncheon with the King and Queen, Nov. 21, and took his seat in the House of Lords, Nov. 23.

Lady Van Horne has closed her summer home, Covenhoven, St. Andrews, N.B., and with Miss Van Horne has returned to Montreal.

Chas. T. O'Neal, formerly Superintendent, Lehigh Valley Rd., Buffalo, N.Y., has been appointed General Superintendent at South Bethlehem, Pa.

John Smithers, a well known stock broker, who died in London, Eng., Nov. 17, aged 76, was brother of A. W. Smithers, Chairman, G.T.R.

Miss Winifred B. Goodchild, daughter of A. A. Goodchild, General Storekeeper, C.P.R., Montreal, was married there Nov. 8, to C. W. Byers, of Winnipeg.

J. Murray Gibbon, General Publicity Agent, C.P.R., gave an address on immigration and the electrical industry at the Montreal weekly electrical luncheon, Nov. 8.

H. G. Barber, formerly Resident Engineer, C.P.R., Nelson, B.C., is now a lieutenant in the 239th Battalion Overseas Railway Construction Corps, Canadian Expeditionary Force.

A. McNabb, station agent, G.T.R. Peterborough, Ont., was presented with an address and a travelling outfit by the local staff, Nov. 2, on resigning to enter private business.

Hugh Sutherland, Executive Agent, Canadian Northern Ry., Winnipeg, who has been in New York for several months past, will it is said spend the winter in Bermuda with Mrs. Sutherland.

D. B. Hanna, Third Vice President, Canadian Northern Ry., has resigned as a director of the London & Canadian Loan & Agency Co., in consequence of his many other business engagements.

A. S. Goodeve, member of the Board of Railway Commissioners, accompanied by Mrs. Goodeve, sailed for England, Nov. 9, to meet their daughter in London, on leave from nursing duties at Salonica.

Mrs. F. C. Salter, wife of the European Traffic Manager, G.T.R., and Canadian Express Co., London, Eng., arrived in Canada recently, with her two sons, the elder of whom is to complete his education in Canada.

G. W. Curtis, Industrial Agent, C.P.R., Montreal, has enlisted in the Royal Flying Corps, and will be leaving shortly for England. He has been in C.P.R. service for about 12 years, for 4 of which he was Industrial Agent at Montreal.

Lieut. T. A. Hiam, formerly secretary to Sir Donald Mann, Vice President, Canadian Northern Ry., who has been Assistant Adjutant of the 198th Battalion, Canadian Expeditionary Force, has been appointed Paymaster, with rank of Captain.

S. J. McLean, member of the Board of Railway Commissioners, has been admitted to the Ontario bar. Owing to his exceptional experience and qualifications in his capacity as commissioner, he had been exempt from serving the usual period in a legal office.

Capt. G. A. E. Bury, of Winnipeg, son of George Bury, Vice President, C.P.R., who went overseas with the 116th Light

Infantry, was for 8 months at the front, and was in June last appointed Deputy Adjutant Quartermaster General of the Training Division, has been promoted to Major.

John Hendry, at one time President, Vancouver, Westminster & Yukon Ry. Co., who died at Vancouver, B.C., recently, left an estate which was valued at about \$1,250,000, the net value being \$725,783.83. Shares held in the V.W. & Y.R., to the number of 25,020, are given as of no value.

H. McEwen, Superintendent, Prince Edward Island Ry., Charlottetown, P.E.I., has retired after 42 years service. He entered P.E.I.R. service May 14, 1875, as station master at Mount Stewart, and was appointed dispatcher in Feb., 1892, Chief Dispatcher in May, 1899, and Superintendent, May 1, 1912.

R. A. C. Young, who has been Superin-

William Phillips
Freight Traffic Manager, Eastern Lines, Canadian Northern Railway.

tendent, Canadian Northern Transfer Co., Ltd., Montreal, since its formation, and who is now a lieutenant and acting Quartermaster in the 5th Royal Highlanders first reinforcing company, was entertained at dinner in Montreal on Nov. 4 by some forty C.N.R. officials and other friends, Guy Tombs, General Freight Agent, presiding.

E. W. Delano, who has been appointed Division Engineer, Lake Superior District, Canadian Northern Railway, Capreol, Ont., was formerly Assistant District Engineer on the construction of the C.N.R. Montreal-Port Arthur line, at Port Arthur, Ont., and on completion of construction, took up engineering work in the U.S. Immediately prior to his present appointment he was in the Bangor & Aroostook Ry. Engineering Department.

Robert H. Fish, who has been appointed Superintendent, Stratford Division, Ontario Lines, G.T.R., Stratford, was born at Oakville, Ont., in 1871, and entered G.T.R. service in 1890, since when he has been, to 1900, locomotive fireman;

1900 to Oct. 1, 1908, locomotive man; Oct. 1, 1908, to Jan. 23, 1913, Road Foreman of Locomotives, London, Ont.; Jan. 23, 1913, to Nov. 14, 1916, Trainmaster, Districts 20 and 21, Ontario Lines, Brantford, Ont.

Robert Gordon Holmes, who has been appointed Assistant General Freight Agent, Western Lines, C.P.R., Winnipeg, was born there June 9, 1881, and entered C.P.R. service Sept. 5, 1898, since when he has been, to May 1, 1899, junior clerk; May 1, 1899, to Jan. 1, 1901, register clerk; Jan. 1, 1901, to Apr. 1, 1902, stenographer; Apr. 1, 1902, to Dec. 1, 1903, statistical clerk; Dec. 1, 1903, to May 1, 1905, tariff compiler; May 1, 1905, to Jan. 1, 1909, chief clerk, Tariff Bureau; Jan. 1, 1909, to Oct. 1, 1916, Chief of Tariff Bureau; all service at Winnipeg.

Charles Thomas Stanger, who has been appointed acting District Freight Agent, C.P.R., Saskatoon, Sask., was born in Rutland, Eng., May 11, 1887, and prior to coming to Canada in 1909, was for six years freight clerk at various points in England, in London & North Western Ry. service. He has been, from Mar. 1, 1909, to May 1, 1911, stenographer, C.P.R., Edmonton, Alta.; May 1, 1911, to Dec. 1, 1912, successively, rate clerk, Travelling Freight Agent, and chief clerk to District Freight Agent, C.P.R., Calgary, Alta.; Dec. 2, 1912, to Mar. 30, 1916, Travelling Freight Agent, C.P.R., Regina, Sask.

Aubrey Cecil Barker, whose appointment as acting Superintendent of Telegraph and Time Service, Intercolonial Division, Canadian Government Railways, Moncton, N.B., was announced in our last issue, was born at Lacadie, Que., Aug. 5, 1878, and entered railway service Oct. 1, 1895, since when he has been, to Apr., 1900, agent and operator, at various points, Eastern Division, C.P.R.; May, 1900, to Oct., 1913, dispatcher, and Chief Dispatcher, consecutively, Lake Superior Division, C.P.R., Chapleau, Ont.; Oct., 1913, to Oct., 1916, Inspector of Stations, Trains and Train Dispatching, Canadian Government Railways, Moncton, N.B.

Sir Eric Geddes has been appointed by the British Secretary of State for War, Director General of Military Railways. He acts as Deputy to the Quartermaster General in matters affecting transport services, and also directs and organizes such services in France under the General Officer Commanding in Chief. He was formerly Deputy General Manager of the North Eastern Ry., England, and is a Lieutenant-Colonel in the Engineer and Railway Staff Corps. A younger brother, Brigadier General A. C. Geddes, who is Director of Recruiting, was, prior to the war, Professor of Anatomy, McGill University, Montreal.

Charles Forrester, who has been appointed Superintendent, London Division, Ontario Lines, G.T.R., London, was born at Wanstead, Ont., Mar. 5, 1876, and entered G.T.R. service July 15, 1891, since when has been, to Aug. 23, 1899, operator at various points in the Middle Division; Aug. 23, 1899, to Aug. 20, 1906, dispatcher, London, Ont.; Aug. 20, 1906, to Oct. 20, 1907, Night Chief Dispatcher, London, Ont.; Oct. 20, 1907, to July 1, 1910, Chief Dispatcher, London, Ont.; July 1, 1910, to Jan. 22, 1913, Trainmaster, Stratford, Ont.; Jan. 22, 1913, to Nov. 14, 1916, Superintendent, Stratford Division, Ontario Lines, Stratford.

George R. Cunliffe, who has been appointed Superintendent, District 3, West-

ern Division, Canadian Northern Ry., Edmonton, Alta., commenced railway service as brakeman, Buffalo Division, G.T.R., and from 1882 to Mar. 1883, was brakeman, C.P.R., Winnipeg; Mar. 1883, to Sept., 1884, conductor, C.P.R., Winnipeg; Sept., 1884, to June, 1887, conductor, Port Arthur, Ont.; June, 1887, to Dec., 1892, conductor, C.P.R., Medicine Hat, Alta.; 1893 to 1898, in Great Northern Ry. service at Spokane, Wash.; 1898 to 1903, not in railway service; 1903 to Sept., 1907, conductor, Canadian Northern Ry., Winnipeg; Sept., 1907, to Nov. 1, 1916, Trainmaster, C.N.R., Brandon, Man.

R. L. Latham, Chief Engineer, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., who has also been appointed Vice President in charge of maintenance, Toronto, Hamilton & Buffalo Navigation Co., was born at Toronto, Nov. 20, 1876, and graduated in civil engineering from the School of Practical Science in 1899, taking the degree of B.A.Sc. in 1901. During portions of 1898, 1899 and 1900 he was engaged in the City Engineer's office, Toronto, and on re-location surveys for the C.P.R. Ontario Lines, and entered T.H. & B.R. service, May 1, 1901, as Assistant Engineer, which position he held until his appointment as Chief Engineer in Oct., 1909.

B. J. Farr, whose appointment as Master Mechanic, Western Lines, G.T.R., Battle Creek, Mich., was announced in our last issue, entered railway service July 1, 1893, with the Central Vermont Ry., St. Albans, Vt., as a machinist apprentice, and was subsequently Erecting Shop Foreman, Locomotive Foreman and General Foreman there, resigning in 1907 on his appointment as Master Mechanic, Northern Ry. of Costa Rica. From 1909 to 1914 he served on the Panama Ry. during the construction of the Panama Canal, and on Jan. 1, 1915, was appointed General Foreman, Western Lines, G.T.R., Battle Creek, Mich., which position he held to the date of his present appointment.

His Honor David MacKeen, Lieutenant Governor of Nova Scotia, who died at Halifax, Nov. 13, was born at Mabou, N.S., Sept. 20, 1839, and was intimately connected with commercial, banking and manufacturing interests for many years. In his early life he was agent and treasurer of the Caledonia Coal & Ry. Co., and later was General Manager of the Dominion Coal Co., resigning that position in 1896, but remaining for some time as a director. He was at various times a director of the West India Electric Co., Royal Bank, Eastern Trust Co., Dominion Iron & Steel Co., and Demarara Electric Co.; President, Halifax Electric Tramway Co., and was a Governor of Dalhousie University. He was M.P. for Cape Breton from 1887 to 1896, and a Senator from 1896.

Kenneth deSola Joseph, who has been appointed acting Assistant Superintendent, Bruce Division, Ontario District, C.P.R., Toronto was born at Quebec, Que., Oct. 6, 1892, and entered C.P.R. service May 6, 1910, since when he has been, to Aug. 31, 1912, chain man, Marquette, Man.; May 1, 1913, to Nov. 15, 1915, transportation student, following the special course of training in connection with the engineering course at McGill University, except from Nov. 1, 1913, to Apr. 1, 1914, when he was telegraph operator on the Lake Superior Division; Nov. 15, 1915, to June, 1916, Assistant Trainmaster, District 1, Atlantic Division, Brownville Jct., Me.; June to Oct. 16, 1916, acting Trainmaster, District 1, Ontario Division, Havelock, Ont.

George Stephen, who has been appointed Freight Traffic Manager, Western Lines, Canadian Northern Ry., Winnipeg, was born at Montreal, July 5, 1876, and entered railway service in 1889, since when he has been, to 1899, clerk, C.P.R.; 1899 to 1900, chief clerk to Assistant General Freight Agent, C.P.R., Winnipeg; 1900 to 1901, Travelling Freight Agent, Manitoba Lines, C.P.R.; 1901 to 1903, Contracting Freight Agent, C.P.R., Nelson, B.C.; 1903 to Jan., 1907, chief clerk to General Traffic Manager, Canadian Northern Ry., Winnipeg; Jan., 1907, to May, 1909, Assistant General Freight Agent, C.N.R., Winnipeg; May, 1909, to Dec. 31, 1915, General Freight Agent, C.N.R., Winnipeg; Jan. 1 to Nov. 6, 1916, Assistant Freight Traffic Manager, Western Lines, C.N.R., Winnipeg.

William McWood, who died at Montreal recently, after a prolonged illness, was born there in 1830, and served an apprenticeship with John Thornton, coach builder, there. He entered G.T.R. service in 1855, and from 1860 to 1873, was Fore-

Allan Purvis
General Superintendent, Ontario District, Canadian Pacific Railway.

man, Car Department. In 1873 he was appointed Assistant Mechanical Superintendent, with charge of the Car Department of the system, and continued in that position, with a change of title to Superintendent of Car Department, towards the latter end of his service, until his retirement under the provisions of the pension rules, Jan. 1, 1908, after 52 years of service. He was a member of the Master Car Builders' Association from 1875, having taken an active part in its organization. He was Vice President of the association from 1882 to 1887, and President for three successive years, 1888 to 1890.

W. M. Acworth, the English member of the commission appointed by the Dominion Government to enquire into the railway situation in Canada, is expected to arrive in Canada about the middle of December. He has visited the North American continent several times, and represented the British Government at the International Railway Congress at

Washington, D.C., in 1905; gave evidence on English railway law and practice before the Elkins committee of the U.S. Senate in the same year, and before the Hadley commission on railway statistics in 1911. As a barrister he practises considerably before the Parliamentary committees, the Railway Commission, the Light Railways Commission, etc., and he is a director of the London Underground Ry. Co., and several of its affiliated companies, as well as of the London United Tramways Co.

William A. Duff, whose appointment as Assistant Chief Engineer, Canadian Government Railways, Moncton, N.B., was announced in our last issue, was born at Hamilton, Ont., Apr. 20, 1877, and graduated from the University of Toronto in applied science in 1901. P. J. Flynn, who resigned recently as Superintendent, Districts 2 and 3, Central Division, Canadian Northern Ry., Winnipeg, on his appointment as Superintendent, Buffalo Division, Lehigh Valley Rd., South Bethlehem, Pa., was presented with a fitted travelling bag by the office staff at Winnipeg on his leaving. He was born at Fishers, N.Y., Nov. 22, 1872, and entered railway service, Apr. 1, 1888, since when he has been, to Aug. 1, 1891, yard clerk, Lehigh Valley Rd., Buffalo, N.Y.; Aug. 1, 1891, to Apr. 1, 1892, night yardmaster, same road, Buffalo, N.Y.; Apr. 1, 1892, to Jan. 24, 1894, yardmaster, Tift Farm Yards, same road, Buffalo, N.Y.; Jan. 24, 1894, to Nov. 1, 1898, General Yardmaster, same road, Manchester, N.Y.; Nov. 1, 1898, to Apr. 1, 1901, Assistant Trainmaster, Pennsylvania Division, same road; Apr. 1, 1901, to Feb. 1, 1905, General Yardmaster, same road, Sayre, Pa.; Feb. 1 to Aug. 1, 1905, General Yardmaster, New York, New Haven & Hartford Rd., Worcester, Mass.; Aug. 1, 1905, to Feb. 1, 1907, General Yardmaster in charge of Terminals, same road, Providence, R.I.; Feb. 1, 1907, to Oct. 1, 1908, General Yardmaster in charge of Terminals, Lehigh Valley Rd., Buffalo, N.Y.; Oct. 1, 1908, to Jan. 1, 1913, Trainmaster, same road, Buffalo, N.Y.; Jan. 1, 1913, to Sept., 1915, Terminals Manager, Canadian Northern Ry., Grand Trunk Pacific Ry., and National Transcontinental Ry., Winnipeg, Man.; Sept., 1915, to Oct. 31, 1916, Superintendent, Districts 2 and 3, Central Division, Canadian Northern Ry., Winnipeg.

Railway Lands Patented.—Letters patent were issued during October, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary & Edmonton Ry.	1,591.00
Canadian Northern Ry.	842.74
Qu'Appelle, Long Lake & Saskatchewan Rd. & Steamboat Co.	1,756.00
Total	4,189.74

Canadian Northern Railway Construction, Betterments, Etc.

The Canadian Northern Quebec Ry. proposes to build a bridge on its Huberdeau extension across Rouge River, lots 25 and 32, range 1, Arundel Tp., ue., at mileage 3.33 from the junction with the C.N.Q. Ry.

Montreal Tunnel & Terminal Co.—The tunnel under Mount Royal, through which the C.N.R. will enter Montreal is finished with the exception of a small amount of the concrete lining. It is expected that that will be completed by about Jan. 15, and that the track will be laid and electrified. From the tunnel's city portal at Cathcart St. to Lagachetiere St. there are about 275,000 yards of excavation to be completed. About half of that will be taken out at first and a temporary station will be built at Lagachetiere St., which, on the permanent station's completion, will be used for express and post office purposes, etc. The temporary station's erection is expected to be started in March or April and to be completed by July, by which time the tunnel should be second tracked and fully completed. A power substation is being built at the west portal and the line from there to the Cartierville yards, 3 miles, is being electrified.

The permanent terminal station will be on Dorchester St., but this will not be erected for some time. Details of the plans for this station, which were prepared by Warren & Wetmore, New York, were given in *Canadian Railway and Marine World*, Oct., 1914, pg. 467. These plans provided for a three storey building (one storey being below the street level), of steel and concrete, having a frontage of 150 ft., and a depth along St. Monique St. of 100 ft., the front to be set back 12 ft. from the sidewalk. Seven swing doors would lead into a vestibule 21 x 100 ft., at the end of which would be the general waiting room, 60 x 100 ft. and 30 ft. high. On one side would be the baggage and express rooms, and on the other ladies' toilet rooms and men's smoking room. The remainder of the ground floor will be laid out for the company's purposes, and the operating offices will be upstairs. There would be three platforms serving six tracks, which would form part of the trackage of the permanent station. The cost of the temporary station was estimated at \$250,000. These plans may, however, be modified.

The Canadian Northern Ontario Ry. is building 100 houses for its trainmen at the following divisional points in its Lake Superior District: Brent, 6; Capreol, 40; Foleyet, 14; Hornepayne, 30; Jellicoe, 10. The houses are being built of sided timber faced three sides in the company's saw mills to 5 in. square and 6 in. square, the half round on the outside. The design of the houses is attractive, they having dormer windows on both sides of the roof with cornice carried around, making a bell-cast end. The interiors are being finished in panelled beaver board. The timber being sided with the saw makes it possible for each piece to lie close to the other, with oakum between, which makes probably the warmest house that could be built for the cold climate of Northern Ontario. The method of construction is also claimed to make the houses slow burning in case of fire.

Canadian Northern Ry.—A contract is reported to have been let to J. J. McKeown, Port Arthur, Ont., for the supply of 200,000 ties for delivery in the spring of 1917. These ties will be used for re-

placement between Port Arthur and Winnipeg.

The Saskatchewan Department of Railways announced, Nov. 3, that the C.N.R. will proceed as soon as possible with the construction of its terminals and bridges at Moose Jaw. Under the authority of chap. 12, Statutes of 1913, the Saskatchewan Government was given permission to affix a provincial guarantee to an issue of \$1,000,000 of bonds for terminal works at Moose Jaw, to include all works and equipment necessary for the same. Three bridges are necessary for the laying out of the terminals, viz., two crossing of Moose Jaw Creek, and a third at the crossing of the C.P.R. The original agreement with the Moose Jaw City Council was made in Feb., 1912, and various concessions have been made. Since the work to be done includes the construction of the Athabasca St. East station; the completion of the trestle connection between the South Hill approach and the main portion of the city, and the completion of the connection between the C.N.R. and the C.P.R. over the property owned by the city, in the vicinity of Gordon, Ironsides & Fare's abattoir. Among the concessions granted is that to construct temporary overhead trestles at Fairford and Athabasca Sts., which are to be replaced by subways within a year after the termination of the war. M. H. MacLeod, General Manager and Chief Engineer, was in Moose Jaw in consultation with the city council on the matter, Oct. 28, when the agreement was finally reached and he was in consultation with Saskatchewan Government officials at Regina prior to the government announcement.

Work is reported to have been started on the connection between the C.N.R. and the C.P.R. at Moose Jaw. This is being done by means of a spur track from the C.N.R. over property owned by the city to a connection with a spur line owned by the city and connecting with the C.P.R. The contract for this spur is reported to have been let to Riddle & Cline, Moose Jaw. The station will be built on Athabasca St., immediately east of Third Ave., on the O. B. Fysh property, and will be of brick and stone construction. A contract is expected to be let for this building at an early date.

We are officially advised that the brick-ied in boilers in the boiler house at the Saskatoon locomotive house are being replaced by three of the company's standard locomotive type boilers, each having a nominal capacity of 100 h.p.

A letter was read at the Saskatoon, Sask., Board of Trade, Oct. 27, from W. A. Brown, General Superintendent, Western Division, relative to improvements carried out or in progress on the line between Saskatoon and Drumheller, Alta., in order to handle the coal traffic. He said in part:—"The locomotive house is partly completed; one additional siding is installed, and as quickly as we can get rails, which I am taking up at Plato pit, on the Elrose subdivision, we will lay two more tracks, each with a capacity of 70 cars. In addition, we are erecting an additional water tank and stand pipe, also a new building complete for yardmaster, weighmaster and car checkers, connected with agent's office by telephone. Regarding water supply, the following improvements have been made:—One additional water tank at Drumheller, dam erected and good supply at Mecheche, also abundant supply at Hanna, new well put down

at Chinook, pipe line and reservoir now under construction, dam at Richdale repaired. This will give us an ample supply of water to handle traffic. We are also installing passing tracks at Alask, Oyen, Youngstown, Cereal, Richdale, Chinook, Craigmyle and Della; two of these sidings have been completed and in use; grading is completed for the balance and is now waiting for steel. I hope to have the additional passing tracks completed in two weeks, providing, of course, I can secure the additional labor required. We may find it necessary to take up pit tracks in a number of our ballast pits in order to get the necessary steel. We have put our roadbed in much better condition than it was at any time last season, particularly the track between Munson and Drumheller, as this has been practically rebuilt, both bridges and roadbed."

The company is erecting a machine shop and a stores building at Edmonton, Alta. The machine shop will be 119 x 61 ft. and 19 ft. high to eaves. It will have a louvred monitor 10 ft. wide, 80 ft. long and 4 ft. high running along the apex of the roof. There will be an annex at the side of the building, 22 x 11 ft., for lavatory and wash room. The walls will be of brick on concrete foundations, and the roof will be of heavy timber construction, covered with asphalt, felt and tar. The roof will be supported on heavy L beams and built up columns. The building will be steam heated and will have a clear space inside, except for one row of columns down the centre. Up to the present the machinery has been situated in one end of the locomotive house, and as more space is required for locomotives, the new shop is being built. It is not intended to buy additional machinery for this shop at present, but arrangements are being made to install electric motors instead of the steam drive hitherto employed. Electric power will be obtained from the City of Edmonton's plant.

The stores building will be 86 x 48 ft., and two stories, 27 ft. high. It is being built on concrete foundations, 7 ft. deep in the ground. The walls will be of brick and the general construction of the heavy mill type. The roof will be covered with ready roofing material. The ground floor will be divided into spaces with heavy racks for the heavier general stores supplies, which will be sorted in separate compartments in each rack; also a space for the public and men's lavatory. The first floor will be divided partly into offices for the Storekeeper, Road Foreman of Locomotives, Master Mechanic and women's lavatory, and the remainder into spaces with racks for the lighter material which will be stocked in the building. The building will have a small basement under the offices, 28 x 13 ft. It will be heated by steam. The contractors for both the machine shop and stores building are E. M. Nesbitt & Co.

The Alberta Board of Public Utility Commissioners has authorized the Canadian Northern Western Ry. to build its Oliver-Battleford branch across the highways through Tp. 59, R. 15-14 west of 4th meridian, mileage 75.83 to 88.76; also through Tp. 59, R. 13-12 west of 4th meridian, mileage 88.76 to 101.37.

Canadian Northern Pacific Ry.—Officials of the C.N.R. from Toronto, Winnipeg and other points visited the Port Mann terminals, Oct. 30. They inspected the car shops and other facilities which have been erected or are in progress. It

was reported that the machinery for the car shops had been shipped and would be installed immediately. The present installation of machinery will provide for the building of five cars a day.

It is reported that as soon as the car ferry docks at Patricia Bay, on Vancouver Island, are completed, a direct car ferry service from Port Mann will be put in operation.

Vancouver Terminals.—A large land transaction in connection with the company's terminal plans on False Creek is reported from Vancouver. The company is said to have bought 18 lots on the east side of Main St., with a total frontage of 2,000 ft., for about \$700,000. The acquiring of this property by the company

and the turning it over to the city forms part of the terms of the agreement of Feb., 1913, relative to the False Creek area.

We are officially advised that the contract for the freight offices and shed at the False Creek flats, Vancouver, has been let to McDonald, Nettleton & Bruce, Vancouver.

Vancouver Island Lines.—It was reported, Nov. 8, that tracklaying and other work had been completed on the line from Patricia Bay to Victoria, 17.5 miles, and that it was expected to be put in operation early in 1917. A gasoline electric car has been delivered for use on the line.

The car ferry slip at Patricia Bay is reported to be nearing completion.

Car Supply for Western Grain Shipments.

Sir Henry L. Drayton, Chief Railways Commissioner, gave the following judgment, Nov. 20, which was concurred in by Commissioner McLean:—

A large number of complaints have been received as to the transportation of grain on the Canadian Northern Ry. lines, to the effect that cars are scarce, and, in some instances, have not been supplied for a considerable length of time; that the elevators are, or are becoming, full; and that, in some instances, farmers are unable to market their grain.

The daily average of cars transported over the system is much lower than the result attained last year. The company states that it is doing everything it can do in hauling the traffic as quickly as possible, giving a fair proportion of the share of cars to every point. It accounts for the apparent falling off in its efficiency in a number of ways. It points out that the grain crop last year was well distributed, and that when the large movement of last year was under way it had the benefit of the short haul as well as the long haul, and that the average distance of transportation, and therefore the number of days per car that was required per load, was much less last year than this year; that this year the shorter hauls are comparatively few, and that the real traffic comes from the western portion of the territories. This, of course, itself would diminish the company's efficiency. In addition to this the company also states that the weather has not only hindered its operation, but has greatly hindered the farmer in his loading. A partial record showing the manner in which cars have been delayed at grain loading platforms has been submitted by the company as follows:—

Maon—1 car delayed 13 days.
Oberlin—1 car delayed 6 days; four cars delayed 5 days.
Lanfine—1 car delayed 8 days.
Eckville—1 car delayed 7 days.
Inland—1 car delayed 8 days.
Campbelltown—2 cars delayed 12 days.
Rosalind—1 car delayed 18 days.
Hay Lake—1 car delayed 11 days.
Vanscoy—1 car delayed 3 days; 1 car delayed 4 days.
Rosetown—1 car delayed 8 days.
Delisle—9 cars delayed 2 days; 3 cars delayed 3 days; 1 car delayed 4 days; 1 car delayed 5 days; 1 car delayed 8 days; 1 car delayed 17 days.
Zealandia—1 car delayed 3 days.
Speers—1 car delayed 2 days.
Hafford—7 cars delayed 12 days.
Forgar—1 car delayed 2 days.
Birdview—2 cars delayed 4 days; 1 car delayed 6 days; 2 cars delayed 7 days; 1 car delayed 9 days.
Girvin—1 car delayed 2 days.
Krydor—1 car delayed 3 days.
Laura—1 car delayed 4 days.
Dundurn—1 car delayed 3 days.
Strehlow—8 cars delayed 2 days; 3 cars delayed 3 days; 2 cars delayed 4 days; 3 cars delayed 6 days; 1 car delayed 12 days.

Haultain—2 cars delayed 2 days; 5 cars delayed 3 days; 1 car delayed 7 days.
Grasswood—2 cars delayed 2 days; 1 car delayed 5 days; 1 car delayed 7 days.
Saskatoon—12 cars delayed 3 days.
Elrose—1 car delayed 10 days; 1 car delayed 3 days.
Maymont—6 cars delayed 2 days; 3 cars delayed 3 days; 1 car delayed 4 days; 1 car delayed 7 days.
Findlater—2 cars delayed 3 days; 1 car delayed 4 days; 1 car delayed 6 days.
Dana—3 cars delayed 2 days.
Aberdeen—32 cars loaded over platform, 22 of these delayed 35 days over free loading.
Clarkboro—22 cars loaded over platform, 14 of these delayed 49 days over free loading.
Edam—1 car delayed 4 days; 1 car delayed 8 days.
Clyde—3 cars delayed 2 days.
Colinton—1 car delayed 4 days.
Lashburn—1 car delayed 8 days.
Minburn—1 car delayed 3 days.
Benton—1 car delayed 3 days.
Youngstown—1 car delayed 2 days.
Valley River—1 car delayed 18 days.
Gilbert Plains—3 cars delayed 2 days.
Togo—1 car delayed 6 days.
Veregin—3 cars delayed 3 days; 8 cars delayed 4 days; 2 cars delayed 5 days; 2 cars delayed 6 days; 5 cars delayed 7 days; 1 car delayed 8 days; 1 car delayed 9 days; 1 car delayed 10 days; 1 car delayed 13 days.
Mikado—6 cars delayed 2 days; 1 car delayed 3 days; 1 car delayed 6 days.
Canora—4 cars delayed 5 days.
Buchanan—2 cars delayed 2 days; 1 car delayed 3 days.
Invermay—1 car delayed 8 days.
Wadena—1 car delayed 3 days.
Kenville—1 car delayed 7 days.
Norquay—1 car delayed 5 days.
*Hawthorne—1 car delayed 13 days; 1 car delayed 32 days.
Briercrest—1 car delayed 2 days; 1 car delayed 5 days.
Mossbank—1 car delayed 7 days—case of car being ordered before grain cut.
*In the two cases at Hawthorne the same man created both delays.

The company points out that when cars are placed and a few bushels of grain put in, the company can do nothing but leave it there until the loading is completed. During the period of congestion last year the farmers largely abandoned platform loading and loaded through elevators in order to speed the movement. This is a question, however, on which the board can take no action one way or the other. The loading platform has served, and, of course, does serve, a very good end in providing the farmer with a measure of competition for the sale of his grain, which he otherwise, in many instances, would not get. The question is entirely one for him.

The company also claims that the other demands of the provinces have greatly increased, and that the freight deliveries into and out of prairie distributing centres are greatly in excess of last year, and that fair attention must be given to this traffic. Everything, however, ought to be done which can be done in order to facilitate the grain movement and each complaint has been taken up with the company to secure this end. The request has been made that the legislation of last

year, under which the board may require the company, when unable to provide facilities for the movement of grain, to furnish all facilities within its powers for the carriage of such grain to a point of interchange with another company or any terminal elevator, and requiring such other company to then complete the transportation, be put into effect. It is, of course, impossible to do this at present, for two reasons,—first, that this legislation, which was passed entirely to meet a greater emergency, only comes into operation after the close of navigation, so that the board has no jurisdiction at present to make any such order; and, secondly, for the obvious reason that the first duty of the other companies is to farmers on their lines, and that the grain on these other lines has not yet been marketed. The best results will be best obtained by the close co-operation of all interested. The railways can assist very much in seeing that cars are handled with the least possible delay, both to and from the wheat fields, and the producers can similarly assist in seeing that the cars are loaded with as little delay as possible. The board's Chief Operating Officer, Mr. Spencer, will leave today for the west with a view of further assisting the rapid movement as much as possible.

It must, of course, be recognized that car shortage is not confined to the Canadian Northern lines, nor to western territory. The complaint of car shortage in different directions is one more or less common. The Canadian Pacific, for example, has an absolute car shortage in connection with the elevator equipment. While the situation in Canada is not so acute as it is in the United States, nevertheless, the American Railway Association's figures are illustrative of general conditions. Its returns show that while at one period in 1908 there was a surplusage of over 413,000 cars, that the car surplus (which, of course, changes from time to time and becomes in certain districts a shortage), on Aug., 1916, only showed 9,762 idle cars, while there was an actual car shortage on Sept. 1 of 19,873, on Sept. 30 of 60,967, and on Nov. 1 the net car shortage was 108,010 cars. The empty car situation in Canada is aggravated by the fact that a large number of Canadian cars have not been returned by the United States to Canadian railways. The Canadian Pacific reports 24,000 cars off its system and the Canadian Northern 5,112 cars.

Conserving C.P.R. Freight Cars.—On account of the car shortage in the United States and the fact that the interchange rules are being generally disregarded there, the C.P.R. Western Lines management has issued instructions that C.P.R. cars are not to be loaded with grain for points in the U.S. The C.P.R. will, of course, supply any U.S. cars routing in the proper direction for such business.

Alaska Rates.—A Washington, D.C., press dispatch recently stated that the Interstate Commerce Commission had notified the Canadian Pacific Ry., Grand Trunk Pacific Coast Steamship Co. and Border Transportation Co. that they had been made additional parties to the investigation of the railway rates and practices in Alaska. Examiner Wilson conducted hearings at Cordova Nov. 11 and at Juneau Nov. 23, and will conclude at Seattle Dec. 4.

Canadian Railway Club.—J. S. Coffin, Jr., Canadian Sales Manager, Locomotive Pulverized Fuel Co., read a paper on pulverized fuel for locomotives on Nov. 14, in Montreal.

Canadian Pacific Ry. Construction, Betterments, Etc.

New Brunswick District.—A considerable amount of work has been done at the company's terminals at West St. John, N.B., during the past summer, making for the more expeditious handling of the winter freight business. The large piers erected in 1915 have been finally completed and many new tracks laid thereon. There is now accommodation at Sand Point for about 1,500 cars. The last of the new steamship berths has been completed, which means that it will be possible to handle 25 more steamships during the season than was possible last winter.

Quebec District.—The Montreal Board of Control has decided not to make any objection to the company erecting a wooden bridge across Notre Dame St., in place of one burned some time ago, but to reserve the right to ask for the erection of a permanent structure at some future time. The board is discussing a plan for widening the subway under the C.P.R. tracks on St. Denis St.

In order to keep pace with the increasing business the company is enlarging its yards at Smiths Falls, Ont., by adding eight new tracks to the east yard, increasing its capacity from 500 to 1,070 cars; and additional tracks in the west yard, increasing its capacity from 570 to 850 cars. A new cinder pit and additional repairing facilities are also being provided.

Manitoba District.—We are officially advised that three umbrella train platform roofs are being built at Winnipeg station, over the platforms between tracks 1 and 2, 3 and 4, and 5 and 6, their respective lengths being; No. 1, 566 ft. 7 in.; No. 2, 733 ft. 7 in.; No. 3, 877 ft. 10 in. They have the ordinary wooden roof, supported on steel pole structure. The roofs are of slow burning mill construction, 3 in. of timber, with 5 ply tar and gravel on top of it. While the clearance between the cars and the roofs will be ample, the roofs will afford adequate protection to the public. They are expected to be completed by Dec. 1.

Saskatchewan District.—Grant Hall, Vice President and General Manager, Western Lines, accompanied by General Superintendent Stevens and T. C. McNab, Resident Engineer, Moose Jaw, Sask., made a trip of inspection recently, starting from Assiniboia, on the Weyburn-Lethbridge line, through the territory between that line and the International Boundary, with a view to ascertaining the possibilities for railway construction there. The company is just completing the building of a branch from Moose Jaw to Assiniboia, the section being built extending from Vantage to the junction point. The residents of the district south of this line asked recently for railway connection and for a branch line from Aneroid, mileage 172 from Weyburn.

Alberta District.—The tracklaying on the extension of the line from Sterling, Alta., now in operation to Pakowki, mileage 75, easterly towards a connection with the western end of the line from Weyburn, Sask., at the Alberta-Saskatchewan boundary, was expected to have been completed to the Mayberries district by Nov. 30. Track had been laid to Orion on Oct. 30, and was reported completed into Manyberries, Nov. 14. Ballasting is also being done.

British Columbia District.—It is expected that some time during this month a conference will be held between the

Vancouver City Council and Grant Hall, Vice President and General Manager, Western Lines, with respect to the construction of a tunnel beneath the city. A deputation from the city council waited on F. W. Peters, General Superintendent, British Columbia District, Nov. 4, and placed the council's views before him. The matter was under consideration in 1913, when plans for a tunnel were submitted to the Railways Department, Ottawa. The suggestion is that a tunnel be constructed, starting at the inlet bluff at Burrard St., and coming out near the drill hall on Beatty St. A single track tunnel was estimated to cost about \$700,000, and a double track tunnel about \$1,000,000. Mr. Peters is reported to have informed the delegation that much of the congestion which the tunnel was originally projected to relieve had been done away with by the laying out of the new divisional yards at Coquitlam, that the company was also spending large sums of money on other improvements of its lines in Vancouver, but that the city's proposal would receive consideration.

Freight and Passenger Traffic Notes.

Vancouver, B.C., City Council has appointed Aldermen Gale and Mahon to draw up a plan for the co-operation of the city in the work of the Northern Pacific Coast Tourist Association, formed recently at Tacoma, Wash.

The Victoria, B.C., Board of Trade had a conference with J. W. Troup, Manager, B.C. Coast Service, C.P.R., on Nov. 9, for the purpose of developing an improved service between Vancouver Island and the Kootenay District. It was arranged that R. Marpole, General Executive Assistant, and H. W. Brodie, General Passenger Agent, would also meet the board to consider the matter further.

British Columbia trade reports are quoted as showing that the C.P.R. during September and October took 5,650 empty cars to points in British Columbia to carry freight to eastern points, of which 1,639 were to carry fruits and vegetables from the Okanagan Valley. Traffic on the Canadian Northern Ry. during the same months is said to have averaged 48 cars of freight a day from Port Mann, and over 70 cars a day from other points in the Fraser River Valley.

G.T.R. officials at Hamilton, Ont., report that there has been a large falling off of baskets of produce carried by passengers on the trains reaching Hamilton on market days and a corresponding increase in the number of suit cases checked as baggage. The company says the facilities for checking baggage were devised to cover personal effects only, and not market produce, and are taking steps to make the country travellers take care of their own produce or to pay express charges on it.

The G.T.R. management informed the Mayor of Hamilton, Nov. 1, that it would not provide the passenger service asked for on its line between Hamilton and Burlington Beach. The City Solicitor is looking into the whole situation from the legal standpoint, and the Mayor is reported to have said that if the company will not give a proper service, the city will take steps to recover as much as possible of the money voted as bonuses to the companies which now are part of the G.T.R. system.

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry.—It was announced recently that the receivership of the A.C. & H.B.R. was to be discharged Nov. 30. The railway made default in its bond interest, Dec. 1, 1914, and, shortly after, the Algoma Central Terminals Co. defaulted. The latter company's only source of revenue was the A.C. & H.B.R., which held its property under lease, paying an amount sufficient to cover administration expenses, taxes and bond interest, the bonds of both companies being guaranteed by the Lake Superior Corporation, which, so far, has been unable to fulfil its undertaking. Joint receivers were appointed in Feb., 1915, for the railway company, and in May, 1915, for the terminals company. To protect the rights of the bondholders of each company, an agreement was arrived at and ratified by Parliament, by which a bondholders' committee was appointed, and which is now in practical control. The revenues of both companies are paid to the committee and distributed according to the agreement. On the discharge of the receivership, certain expenses will cease and the bondholders' committee will be freed from certain formalities which a receivership imposes, but the arrangement does not absolve the Lake Superior Corporation from its obligation as guarantor of the bonds. Vivian Harcourt and T. J. Kennedy were the joint receivers appointed, the latter, however, died Aug. 29.

Central Ry. of Canada.—A general meeting of bondholders was called to be held in Montreal, Nov. 30, to consider the scheme of arrangement deposited by the directors in the Exchequer Court of Canada, to consider the company's position, and to appoint a committee to assist the directors and the trustees in preserving bondholders' interests. The company has about £850,000 of 5% bonds outstanding, in Canada, New York, Paris, and London. Interest is in arrear from Oct. 1, 1913. A London, Eng., paper says: "Apparently 58 miles of railway have been completed, of which 38 miles are leased to the G.T.R., and 380 miles were under construction, when, early in 1914, all work was suspended, pending new financial arrangements." A general contract was let for the entire line it was proposed to build between Montreal and Midland, but the only two sections which were ever brought to a construction stage were a 38 mile section from Hawkesbury to South Indian, Ont., and a 15 mile section from Ste. Agathe des Monts to Francetown, Que., and the only track laid was on a small piece from Hawkesbury westerly for 2.50 miles in 1912. Location plans were authorized early in 1913 for a piece of line from mileage 0 to 7, and revised location plans from mileage 5 to 16 in Quebec, and a subsidy contract was entered into with the Dominion Government for the construction of a line from Ste. Agathe des Monts to Howard Tp., Que., 15 miles. Early in 1913, the general contractors, C. J. Wills & Co., London, Eng., commenced proceedings against the company, claiming \$230,000 for 20 miles of line which they claimed to have built, and since then no actual construction has been done.

Temiscouata Ry.—Net earnings for July, \$4,471; for August, \$6,031; aggregate for two months ended Aug. 31, \$10,502.

White Pass & Yukon Route.—Gross earnings from Jan. 1 to Oct. 14, \$1,779,406, against \$1,434,855 for same period, 1915.

Transportation Appointments Throughout Canada.

Allan Line Steamship Co.—See under C.P.R.

Canadian Government Railways.—R. COLCLOUGH, heretofore Superintendent, District 1, Intercolonial Division, Levis, Que., has been appointed Superintendent, District 1, Transcontinental Division, vice J. E. Morazain transferred. Office, Quebec, Que.

J. E. MORAZAIN, heretofore Superintendent, District 1, Transcontinental Division, Quebec, Que., has been appointed Superintendent, District 1, Intercolonial Division, vice R. Colclough transferred. Office, Levis, Que.

W. A. COWAN, A.M.Can.Soc.C.E., heretofore Division Engineer, Transcontinental Division, Ont., has been appointed acting General Superintendent, Transcontinental Division, during the absence of F. P. Brady, on account of ill health. Office, Cochrane, Ont.

A. V. REDMOND has been appointed acting Division Engineer, Transcontinental Division. Office, Cochrane, Ont.

M. W. JENNINGS has been appointed acting Resident Engineer, District 2, Transcontinental Division. Office, Cochrane, Ont.

JOHN BIRSE, whose appointment as District Master Mechanic, District 3, Transcontinental Division, was announced in our last issue, has his office at Fort William, Ont., and not at Transcona, Man.

Canadian Northern Ry.—WILLIAM PHILLIPS, heretofore European Railway and Steamship Manager, London, Eng., has been appointed Freight Traffic Manager, Lines East of Port Arthur, Ont. Office, Toronto.

GUY TOMBS, heretofore General Freight Agent, Lines east of, and including Ottawa, Ont., has been appointed General Freight Agent, Lines East of Port Arthur, Ont. Office, Montreal.

M. A. THOMSON, heretofore City Freight Agent, Ottawa, has been appointed District Freight Agent, with territory east of North Bay, Ont., to L'Orignal, Ont., inclusive, and south to Brockville, Ont., inclusive. Office, Ottawa, Ont.

D. CROMBIE has been appointed General Superintendent, Ontario Division, which position was held by A. J. Hills until recently. Office, Toronto. The position of Superintendent of Transportation, heretofore held by Mr. Crombie, is abolished.

E. CRAWFORD, heretofore chief clerk to Superintendent of Transportation, Eastern Lines, has been appointed Superintendent of Car Service, lines east of Port Arthur, reporting to General Manager. Office, Toronto. This is a new position.

W. M. JACKLIN, heretofore Supervisor of Roadway, Port Arthur, Ont., has been appointed Inspector of Maintenance of Way, lines east of Port Arthur, reporting to General Manager. Office, Toronto. This is a new position.

E. T. AGATE, Assistant Superintendent, Lake Superior District, Capreol, Ont., having resigned, the position has been abolished.

E. W. DELANO, heretofore in Engineering Department, Bangor & Aroostook Ry., has been appointed Division Engineer, Lake Superior District, C.N.R. Office, Capreol, Ont.

GEORGE STEPHEN, heretofore Assistant Freight Traffic Manager, has been appointed Freight Traffic Manager, lines west of and including Port Arthur, Ont.,

and Duluth, Minn. Office, Winnipeg.

A. M. DAFOE has been appointed Inspector of Transportation, Winnipeg, vice H. R. Arthur transferred.

J. C. O'DONNELL, heretofore Superintendent, District 3, Western Division, Edmonton, Alta., has been appointed Superintendent, Districts 2 and 3, Central Division, vice P. J. Flynn resigned to enter another company's services. Office, Winnipeg.

C. WATTERS, heretofore in Stores Department, Brandon, Man., has been appointed Storekeeper, Dauphin, Man., vice J. H. Morgan transferred.

C. D. GLASS, heretofore Assistant Yardmaster, Port Arthur, Ont., has been appointed Trainmaster, Radville, Man., vice G. A. Cunliffe promoted.

J. E. BERRY, heretofore Yardmaster, Regina, Sask., has been appointed Yardmaster, Saskatoon, Sask.

C. R. STOKES has been appointed Car Foreman, North Regina, Sask.

C. Forrester
Superintendent, London Division, Ontario Lines,
Grand Trunk Railway.

G. MORTIMER has been appointed Locomotive Foreman, Blue River, Sask.

J. H. CRAIG, heretofore air brake tester, Edmonton, Alta., has been appointed Car Foreman, Tollerton, Alta., vice G. S. Clarke transferred.

G. S. CLARKE, heretofore Car Foreman, Tollerton, Alta., has been appointed Car Foreman, Dauphin, Man.

J. H. MORGAN, heretofore Storekeeper, Dauphin, Man., has been appointed Storekeeper, Port Mann., B.C.

H. R. ARTHUR, heretofore Inspector of Transportation, Winnipeg, has been appointed Terminal Inspector, Vancouver, B.C.

Canadian Pacific Ry.—J. S. DENNIS, Assistant to President, in charge of Natural Resources Department, has moved his office from Calgary, Alta., to Montreal.

J. H. BOYLE, heretofore Superintendent, Farnham Division, Quebec District, Farnham, has been appointed General

Superintendent, Quebec District, vice Allan Purvis, temporarily transferred to the Ontario District. Office, Montreal.

W. H. NEAL, heretofore Assistant Superintendent, Montreal Terminals Division, Quebec District, Outremont, Que., has been appointed acting Superintendent Car Service, Eastern Lines, vice H. J. Humphrey transferred. Office, Montreal.

H. J. HUMPHREY, heretofore Superintendent of Car Service, Eastern Lines, Montreal, has been appointed Superintendent, Farnham Division, Quebec District, vice J. H. Boyle transferred. Office, Farnham.

L. J. SKELLEY, heretofore chief traffic supervisor, Montreal Terminals, has been appointed Assistant Superintendent, Montreal Terminals Division, Quebec District, vice W. M. Neal transferred. Office, Outremont, Que.

R. W. SCOTT, heretofore Assistant Superintendent, Sudbury Division, Algoma District, Sudbury, has been appointed Assistant Superintendent, Trenton Division, Ontario District, vice L. G. Rogers, temporarily acting as Superintendent of that division. Office, Trenton.

ALLAN PURVIS, heretofore General Superintendent, Quebec District, Montreal, has been appointed General Superintendent, Ontario District, replacing J. T. Arundel during his absence on account of illness. Office, Toronto.

D. O. WOOD, General Freight Agent for Ontario, Allan Line Steamship Co., is also taking over the duties of Assistant Export and Import Freight Agent, C.P.R., Toronto, vice W. C. Duncan, who is being transferred to Montreal. Mr. Wood is removing his office and staff from the Allan Line office, 95 King St. West, to the C.P.R. Building, King and Yonge Sts., Toronto.

K. D. JOSEPH, heretofore Trainmaster, District 1, Ontario Division, Havelock, has been appointed acting Assistant Superintendent, Bruce Division, Ontario District, vice W. E. McGill, transferred. Office, Toronto.

W. E. MCGILL, heretofore Assistant Superintendent, Bruce Division, Ontario District, Toronto, has been appointed Assistant Superintendent, Sudbury Division, Algoma District, vice R. W. Scott transferred. Office, Sudbury, Ont.

G. J. FOX, heretofore Trainmaster, Portage Division, Manitoba District, Winnipeg, has been appointed Superintendent, Schreiber Division, Algoma District, vice F. W. Cooper resigned. Office, Schreiber, Ont.

J. TOTTON, heretofore electrician, North Transcona, Man., has been appointed Resident Electrician, Fort William, Ont., vice J. McLaughlin transferred.

R. G. HOLMES, heretofore Chief of Tariff Bureau, Winnipeg, has been appointed Assistant General Freight Agent, Western Lines. Office, Winnipeg.

W. E. ARNOLD has been appointed Chief of Tariff Bureau, Western Lines, vice R. G. Holmes promoted. Office, Winnipeg.

C. H. FOX, heretofore Assistant Division Engineer, Winnipeg, has been appointed Resident Engineer, Portage Division, Manitoba District, Winnipeg. His former position has been abolished.

G. YORK, heretofore Roadmaster, Souris Division, Manitoba District, Souris, has been appointed Roadmaster, Kenora Division, Manitoba District, Winnipeg.

J. McRAE, heretofore Roadmaster, Brandon Division, Manitoba District,

Brandon, has been appointed Roadmaster, Souris Division, Manitoba District, Souris, vice G. York transferred.

W. H. RUTHVEN, heretofore conductor, Kenora, Ont., has been appointed Trainmaster, Minnedosa, Man., vice — Fryers, transferred.

C. T. STANGER, heretofore Travelling Freight Agent, Saskatoon, Sask., has been appointed acting District Freight Agent there, vice — Cushman, who enlisted for active service with the 6th University Company, P.P.C.L.I.

P. L. NAISMITH, Manager, Department of Natural Resources, Calgary, Alta., has been appointed to the direct management of the department there, owing to the removal of J. S. Dennis, Assistant to President, to Montreal.

ALBERT MAGUIRE, heretofore chief clerk to Superintendent, Revelstoke, B.C., has been appointed Paymaster, Calgary, Alta., vice G. H. Carter.

T. LEES, heretofore Assistant Division Engineer, Calgary, Alta., has been appointed Resident Engineer, Calgary, Alta., vice R. C. Harris transferred to Edmonton, Alta.

H. H. FITZSIMMONS, heretofore conductor, Frank, Alta., has been appointed Night Yardmaster, Lethbridge, Alta., vice J. D. Murray transferred.

C. G. WASHBON, heretofore Trainmaster, Brandon, Man., has been appointed Resident Engineer, Medicine Hat, Alta.

A. MASSEY has been appointed Bridge and Building Foreman, Edmonton, Alta., vice H. Marshall.

D. MURRAY, heretofore Night Yardmaster, Lethbridge, Alta., has been appointed Night Yardmaster, Revelstoke, B.C.

J. McLAUGHLIN, heretofore Resident Electrician, Fort William, Ont., has been appointed Resident Electrician, Vancouver, B.C., vice R. Chambers, resigned.

Dominion Steel Corporation.—J. R. McISAAC, heretofore Traffic Manager, Dominion Coal Co., has been appointed General Traffic and Transportation Manager, Dominion Steel Corporation, including Dominion Coal Co., and Dominion Iron & Steel Co. Office, Sydney, N.S.

Dominion Atlantic Ry.—F. L. COREY has been appointed Trainmaster and Chief Dispatcher, vice R. B. Brown, who has been granted extended leave of absence owing to ill health. Office, Kentville, N.S.

Grand Trunk Ry.—ROSS McLENNAN, heretofore Chief Dispatcher, London, Ont., has been appointed Trainmaster, Districts 20 and 21, Ontario Lines, vice R. H. Fish, promoted. Office, Brantford, Ont.

C. FORRESTER, heretofore Superintendent, Stratford Division, comprising Districts 15, 22 and 23, Ontario Lines, Stratford, has been appointed Superintendent, London Division, comprising Districts 17, 18, 20, 21 and 24, Ontario Lines, vice W. R. Davidson, transferred. Office, London, Ont.

R. H. FISH, heretofore Trainmaster, Districts 20 and 21, Ontario Lines, Brantford, has been appointed Superintendent, Stratford Division, comprising Districts 17, 18, 20, 21 and 24, Ontario Lines, vice C. Forrester, transferred. Office, Stratford, Ont.

A. S. SHARP, heretofore Chief Dispatcher, Brantford, Ont., has been appointed Chief Dispatcher, London, Ont., vice Ross McLennan, promoted.

J. R. BRENT, heretofore dispatcher, London, Ont., has been appointed night chief dispatcher, London, Ont., vice W. B. Doherty, promoted.

W. B. DOHERTY, heretofore night chief dispatcher, London, Ont., has been

appointed Chief Dispatcher, Stratford, Ont.

W. R. DAVIDSON, heretofore Superintendent, London Division, comprising Districts 17, 18, 20, 21 and 24, Ontario Lines, London, has been appointed Superintendent, Detroit Division, comprising Durand Terminals, Districts 27, 28 and 29, and Pontiac, Oxford & Northern Ry., vice J. Caldwell. Office, Detroit, Mich.

F. B. ZERCHER, formerly Master Car Builder, Eastern Lines, C.P.R., Montreal, has been appointed Master Car Builder, Western Lines, G.T.R., vice A. Copony, resigned. Office, Elsdon, Ill.

The following station agents have been appointed: Windsor Mills, Que., C. A. Beaubien; Cornwall, Jct., Ont., S. P. Whyte; Hoards, Ont., W. B. Emmons; Hespeler, Ont., J. M. Fairweather; Edgington, Ont., F. A. Hawkshaw.

Grand Trunk Pacific Ry.—The following station agents have been appointed:—Young, Sask., M. L. Myers; Unity, Sask., G. L. Berry; Lewvan, Sask., L. Connolly; Lawson, Sask., E. D. Card; Ryley, Alta.,

K. D. Joseph,
Acting Assistant Superintendent, Bruce Division,
Ontario District, Canadian Pacific Railway.

R. L. Peckenhaugh; New Norway, Alta., D. J. Harnett; Ferintosh, Alta., H. West; Trochu, Alta., C. L. Kusler; New Hazelton, B.C., B. Catterall.

Lehigh Valley Rd.—P. J. FLYNN, heretofore Superintendent, Districts 2 and 3, Central Division, Canadian Northern Ry., Winnipeg, has been appointed Superintendent, Buffalo Division, L.V.R., vice C. T. O'Neal, promoted. Office, South Bethlehem, Pa.

Prince Edward Island Ry.—T. B. GRADY, heretofore station agent and operator, Summerside, P.E.I., has been appointed Superintendent, vice H. McEwen, who has been granted extended leave of absence prior to his retirement after about 42 years of faithful service. Office, Charlottetown, P.E.I.

Toronto, Hamilton & Buffalo Navigation Co.—R. L. LATHAM, Chief Engineer, Toronto, Hamilton & Buffalo Ry., has also been appointed Vice President, T.H. & B.N.Co., in charge of maintenance. Office, Hamilton, Ont.

Reported Purchase of Spokane International Railway by C.P.R.

A Spokane, Wash., press dispatch of Nov. 14 said "The Spokane-International Ry. has been sold to the Canadian Pacific Ry. and the Minneapolis, St. Paul & Sault Ste. Marie Ry. D. C. Corbin, President and builder of the Spokane-International, upon his return from New York yesterday, announced that negotiations between himself and his associates and Baron Shaughnessy, President, C.P.R., had been completed. The price was not made public. Mr. Corbin will continue as President of the Spokane-International, being relieved from some of his duties."

Enquiry of the C.P.R. management has failed to elicit any information as to the reported purchase, one of the officials writing:—"There is nothing whatever to be said regarding the press report referred to, which, to say the least, is premature." Our experience is that when a report is spoken of as "premature," it may generally be considered as having pretty good foundation.

The Spokane-International Ry. extends from Spokane, Wash., 140.8 miles to the International Boundary Line at Eastport, Idaho, where it connects with the C.P.R. at Kingsgate, Alta. It also has two small branches, 22.9 and 11.6 miles respectively. A through passenger and freight service is run between St. Paul and Minneapolis, Minn., via the Minneapolis, St. Paul & Sault Ste. Marie Ry. to Portal, Sask., thence via C.P.R. by way of Moose Jaw, Dunmore Jct. and Curzon Jct., to Kingsgate, Alta., and thence via Spokane-International Ry. to Spokane. The Spokane-International Ry. has 14 locomotives, 9 passenger cars and 244 freight and miscellaneous cars.

Weekly Barging of a Locomotive.—E. J. Miller contributed the following to the Railway Magazine recently:—"The C.P.R.'s British Columbia District has on one of its lines a curious piece of working. Running down to the Kootenay Lake are several lines of railway, one of which has, at present, no physical connection with any other line of the company. This particular length of railway has a mixed train running on one day of the week only. To enable the train to be run a locomotive is put on a barge and taken to the lakeside terminus by steamboat from the nearest section of the C.P.R.—and after working the train is returned by the same means. The operation involves two hours' journey on Kootenay Lake, and to transport a locomotive on a lake for the express purpose of working a train service is perhaps unique in railway operation. It would be evidently unremunerative to let the locomotive be idle for the six days to save the transit on the lake. We may add that the Lardeau Subdivision is the one referred to."

British Columbia Institute of Civil Engineers.—A number of civil engineers in British Columbia have organized under the above title and propose to apply to the Legislature for charter giving the society legal status and making it exclusively a provincial organization to which civil engineers and land surveyors may belong. It is to be independent of the provincial branches of the Canadian Society of Civil Engineers. Following are the officers, etc.:—Chairman, E. N. Horsey; Secretary Treasurer, L. Macrae; Under Secretary, F. M. Preston; Committee, Messrs. Stokes, Devey, Noakes, Mitchell, Lambert and Todd. The headquarters are in Victoria.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway and Canal
Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,
70 Bond Street, Toronto, Canada.

ACTON BURROWS, A. Can. Soc. C.E.
Managing Director and Editor-in-Chief.

AUBREY ACTON BURROWS - Secretary and
Business Manager.

Associate Editors
JOHN KEIR and DONALD F. KEIR

Canadian Business Representative,
W. H. HEWITT, 70 Bond Street, Toronto

United States Business Representative,
A. FENTON WALKER, 143 Liberty St., New York

Authorized by the Postmaster General for Canada,
for transmission as second class matter.

Entered as second class matter, July 25, 1913, at the
Postoffice at Buffalo, N.Y., under the Act of Congress
of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year.

SINGLE COPIES, 20 cents each, including postage.

The best and safest way to remit is by express money
order. Where one cannot be obtained, a post office
money order, or bank draft, payable at par in Toronto,
may be sent. Cheques or drafts not payable at par in
Toronto cannot be accepted. Remittances should be
made payable to Canadian Railway and Marine World.

Application by Railways for Higher Import Freight Rates.

Sir Henry Drayton, Chief Railways Commissioner, gave the following judgment, Nov. 6, which was concurred in by the Assistant Chief Commissioner, D'Arcy Scott, and Commissioner McLean:—"The companies desired to materially increase their import rates, which were on a relatively low basis, but which were all rates made by the companies themselves and not imposed by the board. Treated as individual rates, they undoubtedly are low. The proposed increases were suspended by order 24440. The case has been heard and has been standing some time for judgment.

Importers claim that with high ocean rates, the burden on their traffic is already unduly heavy. Undoubtedly ocean rates are very high; but, as a matter of principle, a high ocean rate affords of itself absolutely no reason why the railways companies should be compelled, for the purpose of reducing as much as possible the traffic disability engendered by the high ocean rate, to carry imports at a probably low and unremunerative basis. On the other hand, there is no question as to the fact of high ocean rates and grave resulting difficulties for the importer.

In the Eastern Rates Case, the general rate structure was dealt with, and the whole question of railway finances and requirements of the different lines was given most careful consideration by the board. Such increases as were reasonable were authorized,—these increases in some instances being substantial. The application now made deals with a general rate schedule, and the effect of it cannot properly be measured aside from the effect of the Eastern Rates Case. The full effect of the increases there authorized is not yet apparent. Some of the higher tariffs authorized have not, indeed, been yet put into effect. The condition of the railways, while certainly not all that might be desired, is, nevertheless, much better than it was 18 months ago; and, in view of the assistance already given, no hardship will be worked against the railways in determining that no action should be taken in this case until the effect of the Eastern Rates Case judgment can be clearly demonstrated. Theoretical demonstration really amounts to nothing. The actual traffic returns alone can show what, under the new conditions as developed, the railway situation will be. I am of the opinion that the board should at the present, therefore, take no action in this application.

Railway Mechanical Conventions.—The executive committees of the American Railway Master Mechanics' Association and the Master Car Builders' Association have decided to hold the annual conventions at Atlantic City, N.J., the first named from June 13 to 16, and the latter from June 18 to 21. Strong arguments were advanced in favor of Chicago, the Chamber of Commerce offering the exclusive use of the municipal pier for the occasion.

Passenger Rate Meetings.—Meetings will be held at the Chateau Frontenac, Quebec, as follows:—Niagara Frontier Summer Rate Committee, Jan. 9, 10 and 11; Great Lakes and St. Lawrence River Rate Committee, Jan. 11; International Water Lines Passenger Association, either Jan. 10 or 11, definite date not being yet announced.

Canadian Northern Railway Earn- ings, Etc.

Gross earnings, working expenses, net earnings, increases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$3,834,200	\$2,636,800	\$1,197,400	\$ 711,000
Aug.	3,684,900	2,612,900	1,072,000	614,300
	\$7,519,100	\$5,249,700	\$2,269,400	\$1,325,300
Incr	\$3,573,800	\$2,248,500	\$1,325,300	

Approximate earnings for Sept., \$3,187,900; Oct., \$3,716,800; 3 weeks ended Nov. 21, \$2,563,100; against, \$2,757,000 for Sept., \$3,678,500 for Oct., and \$2,396,200 for 3 weeks ended Nov. 21, 1915.

Canadian Pacific Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those of 1915-16, from July 1, 1916:

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$12,247,440.39	\$8,230,348.66	\$4,017,091.73	\$1,216,688.61
Aug.	13,570,467.31	7,802,680.46	5,467,786.85	2,025,472.13
Sept.	12,134,159.96	7,004,400.80	5,129,759.16	384,458.52

\$37,652,067.66 \$23,037,429.92 \$14,614,637.74 \$3,626,719.26
Inc. \$10,682,075.22 \$7,055,455.96 \$3,626,610.26

Approximate earnings for Oct., \$13,132,000, against \$13,311,000 for Oct., 1915.

Grand Trunk Railway Earnings.

Following are the earnings and expenses for the G.T.R., including the Canada Atlantic Ry., the G.T.W.R. and D.H.G. & M.R., for September, compared with those for September, 1915:—

Grand Trunk Railway.			
	1916.	1915.	
Earnings ..	\$4,617,000	\$3,667,800	
Expenses ..	3,099,000	2,501,100	
Net earnings	\$1,518,000	\$1,176,700	
Grand Trunk Western Railway.			
	1916.	1915.	
Earnings ..	\$ 744,200	\$ 669,900	
Expenses ..	615,300	445,200	
Net earnings	\$ 128,900	\$ 224,700	
Detroit, Grand Haven & Milwaukee Ry.			
	1916.	1915.	
Earnings ..	\$ 275,600	\$ 257,300	
Expenses ..	296,600	192,150	
Net earnings	\$ 21,000—	\$ 65,150	

Approximate earnings for Oct., \$5,651,321, and for 3 weeks ended Nov. 21, \$3,731,151, against \$4,666,691 for Oct., and \$2,894,364 for 3 weeks ended Nov. 21, 1915.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from Jan. 1 to Oct. 31.—

	1916.	1915.	Increase.
G.T.R.	\$39,127,270	\$33,045,502	\$6,081,768
G.T.W.R.	7,781,671	6,241,222	1,540,449
D.G.H. & M.R.	2,761,787	2,272,021	489,766
	\$49,670,728	\$41,558,745	\$8,111,983

Grand Trunk Pacific Railway Earn- ings.

The approximate earnings for the Prairie Section, 916 miles, for Oct., were \$566,503, against \$973,581; and from July 1 to Oct. 31, \$1,643,008, against \$1,858,557 for same period 1915.

Rogers Pass Tunnel Suit.—Argument in Foley, Welch & Stewart's appeal against the assessment of damages at \$576,155.99 in the suit brought by McIlwee & Son was begun in the British Columbia Court of Appeal, Nov. 8. A condition of the granting of permission to appeal was that Foley, Welch & Stewart should deposit in the court \$600,000 to cover judgment and costs.

Attempt to Remedy Car Shortage.—The American Railway Association has adopted a per diem charge, ranging from 45c to \$1.25, for each freight car which any one road shall withhold from another, and imposes a penalty on any road which violates the association's rules relating to car shortage.

Cancellation of Joint Tariffs Forbidden by Board of Railway Commissioners.

The Chief Railways Commissioner issued the following memorandum, Nov. 11, which was concurred in by Commissioner McLean:—Mr. Hardwell, the board's Chief Traffic Officer, has had the question of joint rates up with the railway companies for some time past. He reports that both the Grand Trunk and Canadian Pacific Railways have filed a large number of new joint tariffs, many of which are free from objection; but, he also reports that both these railway companies in tariffs which they have filed are cancelling joint rates without substituting any new joint rates for the rates cancelled.

Under the act, the duty is thrown on companies of filing joint tariffs to cover transportation in cases where the movement over two or more companies is necessary in order to establish a continuous route and through billing. It is to be noticed that the companies are practically only cancelling joint tariffs without submitting new ones in so far as connections with the Canadian Northern System are concerned. Joint rates must be given by both the Grand Trunk and Canadian Pacific Railways to Canadian Northern points. In like manner, the Canadian Northern has cancelled joint tariffs applicable to points on the systems of the other two lines. The same duty, of course, rests on the Canadian Northern—it must maintain joint tariffs between its line and proper points on the other two systems.

An order will go disallowing all notices of cancellation of joint freight tariffs which have not been superseded by other joint freight tariffs duly filed with the board and applicable between the same points and to the same classes of traffic. This order should not be applicable to joint rates which may have been necessary under the former system of railway construction, but which have by reason of present construction become unnecessary. In other words, no joint rate, under the act, is required by the act for a movement covered by the rates of a single carrier by an existing reasonable and practicable route between the same points, and applicable to the same classes of traffic, or by the rates over a new joint route, which is also reasonable and practicable. For example, a shipment from Picton, Ont., to Cobalt, Ont., formerly moved over the Central Ontario to connection with the Grand Trunk or Canadian Pacific, and thence to North Bay, where connection was made with the Timiskaming & Northern Ontario, running into Cobalt, necessitating a joint rate in which at least three carriers participated and two transfers. Today, the Central Ontario, being part of the Canadian Northern System, the Canadian Northern itself can carry the traffic from Picton and make a direct connection with the Timiskaming & Northern Ontario. A joint tariff, in this instance, is only necessary as between the Canadian Northern and the Timiskaming & Northern Ontario Railways, and the action of the Canadian Northern in cancelling a tariff in which the intermediate haul is enjoyed by either the Grand Trunk or Canadian Pacific, is justified.

The cancellations are become effective on Dec. 1. No cancellation will be allowed unless a substituted tariff then takes effect, covering the same service, either by reason of a single haul or by a new reasonable joint traffic route. No formal

order need today go, and opportunity will be given the different companies to show which of the cancellations are in conformity with the principles above stated. The matter will be set down for hearing at Ottawa, Nov. 21, when any cancellation, the effect of which may be in doubt, can be discussed.

The Chief Commissioner gave the following judgment, Nov. 22, which was concurred in by the Assistant Chief Commissioner, D'Arcy Scott, and Commissioner McLean:—A memorandum was issued by the board on Nov. 00, taking cognizance of a large number of cancellations of joint freight rates filed by the Grand Trunk, Canadian Pacific and Canadian Northern Railways. The effect on traffic of the different cancellations was that the traffic henceforth would move at the sum of the locals, involving considerably higher rates. The board intimated that the action was objectionable and would not be allowed, and the question was set down for hearing at the sittings at Ottawa on Nov. 21, so that the different cancellations could be discussed and those ascertained which were objectionable.

A large number of cancellations were shown at the hearing to have been filed. Many movements are affected. As intimated at the hearing, joint rates and services must be maintained. While rates based on the sum of the locals would work a discrimination as against the traffic affected, yet the joint rates which supply in the future in like manner should be joint rates predicated upon the increases already authorized by the board in the Eastern Rates Case. No other increases should be allowed. The different companies, instead of being galled to do business on the sum of the locals, should be ordered to file with the board, not later than Nov. 27, to become effective Dec. 1, supplements to the joint class freight tariffs now in effect, providing rates which must not exceed those at

present in effect by more than the maximum of 2c per 100 lbs., in the 1st class. In so far as other classes are concerned, the rates must be proportioned to the 1st class rates as increased by such a maximum, in accordance with the standard maximum mileage tariff approved by the board for the use of the companies, with a result, for example, that the increases in so far as rates applicable to 5th class commodities are concerned, cannot be increased over a maximum of 1c per 100 lbs.

Order 25656, issued in connection with this matter, is given on another page under "Traffic Orders by the Board of Railway Commissioners."

Express Traffic Association of Canada.

At the Association's semi-annual meeting at Toronto, Nov. 21 and 22, John Pullen, President of the Canadian Express Co., Montreal, was elected Chairman, succeeding W. H. Burr, Traffic Manager, Dominion Express Co., whose resignation has been before the association for some months.

The articles of organization were amended and plans adopted for increasing the scope of the association's work, which will require the services of a secretary, who will devote his entire time to association matters. C. Ham, who has been chief clerk in the Dominion Express Co.'s Traffic Department for the past six years, has been appointed Secretary of the association. He was formerly connected in the Intercolonial Ry. Traffic Department and also in the Board of Railway Commissioners and the C.P.R. service at different times.

The Fort William Elevator Co. has been authorized to increase its capital stock from \$500,000 to \$1,000,000.

Traffic Orders by the Board of Railway Commissioners.

Stop-off Charges on Canned Goods.

25527. Oct. 13.—Re complaint of Dominion Cannery, Ltd., of Hamilton, Ont., against proposed increase in stop-off charges on canned goods, in carloads, from \$3 to \$5 a car. Upon hearing the complaint at Toronto, Ont., the complainants, the Canadian Manufacturers' Association, the Canadian Freight Association, the Grand Trunk and the Canadian Northern Railways, and the Wabash and the Michigan Central Railroads being represented, it is ordered that the said proposed increase in the charge for stopping cars containing part carloads of canned goods in transit for completion of loads be disallowed.

Great Northern Ry. Freight Tariffs.

25564 and 25565. Oct. 25. Granting applications of Great Northern Ry., under section 327 of the Railway Act, for approval of its Standard Freight Tariffs C.R.C. nos. 1244 and 1251, showing rates between stations on lines in British Columbia.

Transfer Track at Moose Jaw.

25569. Oct. 28. Re application of Canadian Northern Ry., under sections 227 and 237 of the Railway Act, for authority to construct a transfer track between its railway and the C.P.R. at Moose Jaw, Sask., as shown on plan dated Winnipeg, June 27, 1916. Upon hearing the application at Moose Jaw, July 12, 1916, the applicant company, the C.P.R., the City of Moose Jaw, the Village of Avonlea, and the Boards of Trade of Moose Jaw, Rosetown, Radville, and Forward being represented; and upon the report of an engineer of the Board, it is ordered that the Canadian Northern be authorized and directed to construct an interchange track with the C.P.R. at Moose Jaw, as shown on the said plan; the work to be completed by Dec. 15, 1916. That the Canadian Northern be authorized to cross the Moose Jaw Electric Ry. tracks on Tenth Ave., as shown on the plan; the crossing to be protected by a half-interlocking plant; derails to be placed on the electric railway and home signals on the Canadian Northern Ry.; and that the derails be interlocked with the signals; detail plans to be filed for the approval of an engineer of the Board, within two weeks from the date of this order. That the Canadian Northern be authorized to construct the said transfer track over Main St. and Tenth and Eleventh Aves., and along Home St., Moose Jaw, as shown on the plan; the crossing to be constructed in accordance with the Board's standard regulations affecting highway crossings, as amended May 4, 1910.

Interchange of Traffic at Brantford.

25570. Oct. 27. Re an application of Dominion Steel Products Co., Ltd., for an order directing the Toronto, Hamilton and Buffalo, the Grand Trunk, and the Lake Erie and Northern Railway Companies to afford proper facilities for receiving, forwarding and delivering of traffic belonging to the applicant company, and for exchange of traffic over the said railways; and that the railway companies provide due switching privileges over their respective lines and interchange of switching for the applicant company's purpose and the petition of certain manufacturers and shippers of Brantford pertaining to interswitching between the railways at Brantford, Ont. Upon hearing the application at Brantford, Sept. 28, 1916, the applicant com-

pany, the railway companies, and local manufacturers being represented, and upon the report of the Board's Chief Traffic Officer, the Lake Erie & Northern Ry. consenting: It is ordered that the L. E. & N. R. be authorized to construct an interchange track for receiving, forwarding, and delivering traffic between its railway and the Toronto, Hamilton & Buffalo and Grand Trunk Railways at Brantford, plans showing the proposed interchange tracks to be submitted for the approval of an engineer of the Board; and the cost of constructing the tracks to be borne and paid by the L. E. & N. R. That where the traffic is between Brantford and a shipping point or destination common to the G.T.R. and the L. E. & N. R., or to the Toronto, Hamilton & Buffalo Ry. and the L. E. & N. R., or to both the G.T.R. and the Toronto, Hamilton & Buffalo Ry., and the L. E. & N. R., where interswitching facilities are provided, the company upon whose line, including private sidings tributary thereto, the traffic is loaded, shall be entitled to the line haul and to the privileges of effecting the required delivery on the line of the other company by means of interswitching at destination; provided that the said company can afford facilities and privileges equal to those of the competing carrier at no greater charge.

Halifax & Southwestern Ry. Rates.

25585. Oct. 30. Re complaint of C. A. Bowlby and others, of Port Medway, N.S., alleging excessive freight rates charged by Halifax & Southwestern Ry. from Halifax to Medway station. Upon hearing the complaint at Port Medway, July 5, 1916, the complainants and the railway company being represented, it is ordered that the complaint be dismissed.

Charges for Heated Refrigerator Cars.

General Order 173. Oct. 26. Re (railway) companies tariffs showing charges for use of heated refrigerator cars; and orders 24680 and 24994, dated Jan. 27 and May 22, 1916, respectively, suspending the said tariffs; also order 25251, Aug. 5, 1916, rescinding order 24994 in so far as it affected tariffs for local movements between points west of Lake Superior, subject to the provisions therein contained. Upon hearing the matter at Ottawa, Toronto, Winnipeg, Saskatoon, Edmonton, Calgary, Regina, and Winnipeg on February 8 and 22, June 12, 14 and 15, July 10, 13 and 14, 1916, respectively, in the presence of representatives of the Boards of Trade of Montreal, Toronto, Hamilton, Winnipeg, and Saskatoon, the Calgary Brewing Co., the Canadian Manufacturers' Association, the Ontario Fruit Growers' Association, the Canadian Pacific, Canadian Northern, and Grand Trunk Pacific Railway Companies and the Michigan Central and New York Central Railroad Companies, and upon the report of the Chief Traffic Officer of the Board: It is ordered that order 24680, Jan. 27, 1916, in so far as it affects local movements between points east of and including Westfort, Ont., be rescinded, provided that the clause in the tariffs thereby suspended restricting the number of destinations of less-than-carload shipments be omitted, and that the clause requiring loading in cars in destination order by shippers be revised so as to apply to shipments handled through the carriers' freight warehouse also.

That orders 24680 and 24994, dated Jan. 27 and May 22, 1916, respectively, in so far as they affect through ship-

ments from and to points east of Port Arthur to and from points west of Westfort, be rescinded; provided that the following subdivision of the territory west of Westfort, and the following maximum tolls for heat in addition to the freight rates from or to the territory west of and including Montreal and Lachute, be substituted for those shown in the tariffs, thereby suspended, and that the differences over these maximum tolls do not exceed from or to the territory south and east of Montreal and Lachute the differences expressed in the said suspended tariffs.

Group 1.—West of Westfort to and including Kenora and Rainy River, \$10 a car.

Group 2.—West of group 1 to and including Winnipeg and Emerson, \$11 a car.

Group 3.—Remainder of Manitoba, \$13 a car.

Group 4.—West of group 3 to and including Viceroy, Moose Jaw, Saskatoon, and Prince Albert, \$15 a car.

Group 5.—Province of Saskatchewan west of group 4, \$16 a car.

Group 6.—West of group 5 to and including the C.P.R. Macleod-Calgary-Edmonton line, \$18 a car.

Group 7.—North of Edmonton and west of group 6 to Penticton, Kamloops, and Prince George, \$22 a car.

Group 8.—West of Group 7 to Vancouver and Prince Rupert, \$25 a car.

That general order 152, Nov. 2, 1915, authorizing certain tolls for the use of refrigerator cars for the carriage of vegetables in carloads, be rescinded.

Transfer Tracks at Prince Albert.

25603. Nov. 6. Re application of Grand Trunk Pacific Branch Lines Co., under sections 227 and 237 of the Railway Act, for authority to construct, maintain and operate a connection and transfer track between its Prince Albert Branch and the Canadian Northern Ry. in Prince Albert, Sask., upon the consent of the Canadian Northern Ry., and the report and recommendation of the Board's Chief Engineer, it is ordered that the application be granted.

25604. Nov. 6. Re application of Grand Trunk Pacific Branch Lines Co., under section 237 of the Railway Act, for authority to construct its Prince Albert Branch and the connection and transfer track between that branch and the Canadian Northern Ry., across Sixth Ave. East, in Prince Albert, Sask. Upon the report and recommendation of the Board's Chief Engineer, no objection having been offered by the City of Prince Albert to the granting of the application, it is ordered that the applicant company be authorized, at its own expense, to construct and maintain its Prince Albert Branch and connection and transfer track between that branch and the Canadian Northern Ry., across Sixth Ave. East, Prince Albert, as shown on said plan and profile on file with the Board, and in accordance with the Board's Standard Regulations Affecting Highway Crossings, as amended May 4, 1910.

Interchange Track at Aurora.

25615. Nov. 3. Joint order by Board of Railway Commissioners and Ontario Railway and Municipal Board. Re application of Town of Aurora, Ont., under subsec. 3 of sec. 228 of the Railway Act, for an order requiring that the lines and tracks of the Grand Trunk and the Toronto & York Radial Railways be connected so as to admit of the transfer of locomotives and trains from the lines or tracks of one such railway to those of another and the receiving, forwarding, delivering and interswitching of traffic between such railways. Upon hearing the application at Toronto, Oct. 6, in the presence of counsel for and representa-

tives of the applicant, the Grand Trunk and the Toronto & York Radial Railways, the Canadian Manufacturers' Association, the City of Toronto and Thos. Urquhart appearing in person, and upon the reports of the Chief Engineer and the Chief Operating Officer of the Dominion and an engineer of the Ontario Railway and Municipal Board, it is ordered that the applicant be authorized, at its own expense, to construct an interchange track between the Grand Trunk and the Toronto & York Radial Railways at Aurora, in the Grand Trunk yards, with a connecting track as shown on the line marked "Estimate no. 1," on the plan filed by the applicant.

Dominion Express Co.'s Fish Tariff.

25616. Re Supplement 3 to Dominion Express Co.'s Special Fresh and Frozen Fish Tariff, C.R.C. 4434, and the applications of Armstrong Trading Co., of Portage la Prairie, Man.; Canadian Fisheries Association, of Montreal, and W. J. Guest Fish Co., of Winnipeg, for an order disallowing the said tariff. Upon reading what is filed in support of the applications, and the reports of the Board's Chief Traffic Officer, and upon its appearing that the cancellation of the rates on fresh and frozen fish provided for in the said supplement was unlawful to the extent that the supplement was not published and filed at Selkirk, Man., 30 days previously to the date on which it was intended to take effect, as required by sec. 328 of the Railway Act, as amended, it is ordered that the said notice of cancellation be disallowed.

Esquimalt & Nanaimo Railway Tariffs.

25641. Nov. 16. Re application of Esquimalt & Nanaimo Ry., under sec. 11 of the Acts 7-8 Edward VII., chap. 61, for the approval of a bylaw, passed Oct. 11, 1916, authorizing C. E. E. Ussher, Passenger Traffic Manager, and C. E. McPherson, Assistant Passenger Traffic Manager, to prepare and issue tariffs of tolls to be charged for the carriage of passenger traffic upon the railways owned or operated by the company, or any portion thereof. It is ordered that the said bylaw be approved; and that order 5856, Dec. 15, 1908, approving of the bylaw passed Dec. 4, 1908, appointing L. D. Chetham, District Passenger Agent of the company, and authorizing him to prepare and issue tariffs of the tolls to be charged, be rescinded.

Algoma Central & Hudson Bay Ry. Pulpwood Rates.

25644. Nov. 17. Re complaint of Lake Superior Paper Co., of Sault Ste. Marie, Ont., against the alleged excessive and unreasonable freight rates charged by Algoma Central & Hudson Bay Ry. on pulpwood, in carloads, for distances of 17 5 to 300 miles, as published in C.R.C. no. 343 and C.R.C. no. 345, it is ordered that the complaint be dismissed.

Chatham, Wallaceburg & Lake Erie Railway Passenger Rates.

25653. The application of Major G. T. McKeough for an order directing the Chatham, Wallaceburg & Lake Erie Ry. to put in force, between Chatham and Cedar Springs station, Ont., a passenger rate applicable to persons carrying on their business or practising their professions in Chatham, but residing in those portions of the Townships of Raleigh and Harwich served by the railway (the said rate to be available also for members of such person's families), which said rate shall not exceed 25c for one round trip ticket when such tickets are purchased in book form as commutation tickets, it is ordered that the application be dismissed.

Joint Class Freight Tariffs.

25656. Nov. 23. Re proposed withdrawal by railway companies, on Nov. 30, of joint class freight tariffs in Eastern Canada which have not already been lawfully superseded by new joint tariffs upon the same description of traffic between the same points. Upon hearing the matter at Ottawa, Nov. 21, 1916, and upon its appearing that the proposed withdrawal of joint class freight tariffs without the substitution of other joint class freight tariffs is in contravention of sec. 338 of the Railway Act, it is ordered that the Grand Trunk, the Canadian Pacific, and the Canadian Northern Railways, file with the board not later than Nov. 27, to become effective Dec. 1, 1916, supplements to the joint class freight tariffs now in effect, and which are not being superseded by new joint tariffs already published and filed, providing rates which shall not exceed those at present in effect by more than 2c per 100 lbs. in the 1st class, the remaining classes of the Canadian Freight Classification to be proportioned to the 1st class rates so increased in accordance with the Standard Maximum Mileage tariff approved by the board for the use of the said companies.

The judgments, etc., in this matter are given fully on another page under "Cancellation of Joint Tariffs Forbidden by Board of Railway Commissioners."

Telegraph, Telephone and Cable Matters.

Lloyd Cadle has been appointed assistant manager, Winnipeg office, Great North Western Telegraph Co., and W. A. Whyte has been appointed manager of the office at Brandon, Man.

A meeting of C.P.R. telegraph agents and managers in British Columbia was held at Vancouver, Nov. 13 and 14, for exchange of ideas and discussion as to the further efficiency of the telegraph service, R. N. Young, Superintendent of Telegraphs, British Columbia District, was chairman.

W. T. Robinson, agent, C.P.R. Telegraphs, Ottawa, Ont., died there of hemorrhage, Oct. 30, aged 56. He was born at Cornwall, Ont., and served with the Great North Western Telegraph Co. at Montreal, and the Western Union Telegraph Co. at Chicago, Ill., prior to 1886, when he entered C.P.R. Telegraphs service at Montreal, and was transferred to Ottawa in 1902.

The Great North Western Telegraph Co. has opened offices at Chandler, Margo, Ridpath and Sturgis, Sask., and Alliance, Alta., and has closed its offices at Valcarter Camp, Que.; Barriefield Camp, Bobcaygeon, Camp Borden, Clifton House, Niagara Falls, Coldwater, Helderleigh, Holland Landing, Kemptville, Paisley, Port Sandfield, Tobermory and Warkworth, Ont. The name of the office at Sellwood Jct., Ont., has been changed to Milnet.

Among the Express Companies.

K. Copeman has been appointed route agent, Dominion Ex. Co., Campbellton, N.B.

P. H. Findlay has been appointed cashier, Dominion Ex. Co., North Bay, Ont., vice R. Glover, promoted.

S. G. Easton has been appointed agent, Dominion Ex. Co., Red Deer, Alta., vice H. W. Kinzett, transferred.

The Canadian Northern Ex. Co. has opened offices at Carmel, Chandler, For-

gan, Hardy, Margo, Ridpath and Sturgis, Sask.

James McLay, heretofore agent, Dominion Ex. Co., Portage la Prairie, Man., has been appointed agent at Swift Current, Sask.

C. E. Ford, heretofore route agent, Dominion Ex. Co., has been appointed agent at Edmonton, Alta., vice A. W. Johnston, resigned.

R. Glover, heretofore cashier, Dominion Ex. Co., North Bay, Ont., has been appointed agent at Orangeville, Ont., vice A. Shain, resigned.

The Dominion Ex. Co. has opened offices at Port Dover, Ont.; Fleet, Alta., and West Summerland, B.C., and has closed its offices at Oxford Lake and Blue Sea, Que., and Poplar and Tappen, B.C.

The Board of Railway Commissioners has disallowed the Dominion Ex. Co.'s notice of cancellation of rates on fresh and frozen fish covered by supplement 3 to its tariff C.R.C. 4434, on complaints from fish shippers in Montreal, Winnipeg and Portage la Prairie.

It is announced from Edmonton, Alta., that the Alberta Government is taking a friendly action against the Dominion Ex. Co. to settle the question as to the amount of intoxicating liquor which an express company may handle under the recently enacted prohibitory laws. The Provincial act provides that one quart of spirits and two gallons of malt liquor may be imported for private use, and if more than this is found on any premises it is to be taken as prima facie evidence that it is being held for illegal use. It is claimed that express companies have no option in the matter, but that they must accept goods as offered for transportation, and the Government holds that the act which limits the quantity for private use, also limits the carrying rights of express companies. The action is being taken on a specific case against the Dominion Ex. Co. for delivering to a private citizen in Calgary a quantity of liquor in excess of the legal one quart of spirits and two gallons of malt liquor.

The St. Paul, Minn. Union Station buildings were condemned by the State Fire Marshal recently and ordered to be removed within six months. The order was issued on the ground that the buildings are dangerous to human life and surrounding property. Plans for the construction of a new station by the St. Paul Union Depot Co. have not yet been agreed to by all the roads concerned. The plans for a new station first prepared have been objected to by the President of the Chicago Great Western Rd. on the ground that the plan of operation of the track system would be prohibitively expensive.

Greater Winnipeg Water District Land Settlement.—In connection with the construction of the new water supply aqueduct for Winnipeg a railway was built from St. Boniface to Waugh, on the Shoal Lake inlet of Rainy Lake. The commissioners in charge, desiring to promote settlement along the line, an arrangement has been made with the Manitoba Government, under which three and a half townships have been acquired from the Dominion Government in the Birch River district, 72 miles from Winnipeg, and are being opened for immediate settlement. A land settlement office has been opened under the charge of E. W. Kopecki, and the government departments will co-operate in the work.

Electric Railway Department

Passenger Cars for London and Port Stanley Railway.

Some preliminary details of the three motor passenger cars which are being added to the London & Port Stanley Ry. equipment were given in Canadian Railway and Marine World for November. These cars will be, in most respects, duplicates of those already in service on the line, but in addition to being longer, there will be embodied a number of improvements, all making for increased convenience and efficiency. Following are the general dimensions of the car bodies:—

Length over all	71 ft. 7 ins.
Length over end vestibules	69 ft.
Length over end of car body	57 ft. 3 ins.
Width over all	9 ft. 10 ins.
Width over sheathing	9 ft. 6 ins.
Width over platform floor including trapdoors	9 ft. 6 ins.
Height from rail to top of roof (car light)	13 ft. 6 1/4 ins.
Height from under side of sills to top of roof	9 ft. 10 1/4 ins.
Height from top of rail to top of platform (car light)	4 ft. 3 1/4 ins.
Seating capacity of passengers	72

The weight of the car body, including heat equipment, seats, light foundations, brake, draft gear, including supports, ready for the installation of control equipment and air brakes, will be about 49,733 lb.; control equipment, 9,500 lb.; air brake equipment, 2,220 lb.; 4 motors complete, 16,000 lb.; 2 trucks, 7 ft. wheel base with 36 in. steel wheels and 6 in. axle with 5 x 9 in. journals, 25,006 lb., making the total approximate weight of the car complete, 102,459 lb.

The equipment, which will be supplied to the car builders by the Hydro Electric Power Commission of Ontario, which is handling the matter for the London Railway Commission, will, for each car, consist of:—4 G.E. 225B 1,500 volt motors, 1 type E, G.E. 1,500 volt control apparatus, 1 c.p. 29A. G.E. air compressor, including complete straight and automatic air equipment, double end, not including pipes and fittings; 2 G.E. pantographs complete, with main fuse in top of roof and insulation, not including brackets and suspensions; 2 headlights, 1 set of complete cables for motors and control, but not air equipment; 1 set of 1,500 volt electric heaters, but not including conduit cables and brackets; 2 trucks complete with wheels, axles and brake beams, to connect up with brake rod under car body furnished by the builders; 1 air signal system, not including piping; 36 seats, 24 finished in plush and 12 in fabrikoid; 1 complete storage battery.

The entire bottom frame of the car is to be made of structural steel shapes and plates, centre and side sills to be continuous, floor and side frames to include cross beams designed to transfer floor load to the side trusses. The floor framing will be braced diagonally between the cross beams, and the end and vestibule framing will have special provision against the effects of a collision. The corner and side posts will be of channel construction, and intermediate posts of T iron, side sheathing, including roof, of steel plate, braced and fastened to the bottom sills and side plates by rivets. The inside of the car will be of solid quarter sawed Mexican mahogany inlaid finish. The flooring of the main body and vestibule will be of yellow pine 3/4 by 3 1/4 in. double flooring for the whole car, and between each floor there will be two layers of waterproof felt paper. The lavatories will have rub-

ber tiling on the floors, white with blue lines, smooth finish. The platform will be on the same level as the car floor, and enclosed with stationary round vestibules sheathed outside with 1-16 in. sheet steel, and inside with wooden panels of ash. Each vestibule will have two drop windows and swinging end door with 26 in. opening, and two side swinging doors each with 29 in. opening. The step opening will be enclosed with single swing doors arranged to swing against the end of the car body, and the openings between the edge of the platform and vestibule doors will be fitted with trapdoors of metal with extension threshold. Triple steps of the steam railway car pattern, made of steel, fitted with anti-slip metal treads and brass finishing strips, after the Pullman design, will be supplied. The vestibule doors will be of mahogany, panelled in the lower portion and glazed in the upper. The roof will be of steel plate 1-16 in. thick, rivetted to the carlines, all joints to be welded or soldered to make a tight joint, and the whole roof will be smooth finish. Twenty automatic ventilators will be built in the roof, 10 on each side. Window fixtures will be finished in bronze, and each sash equipped with rubber weather strip all round, window frames of mahogany with 1/4 in. plate glass laid in rubber; the upper oval windows and the lavatory windows will be of opalescent cathedral glass, the latter being after the Pullman design. The cars will be provided at each end with one spring buffer complete, and with two air sanders. A steam locomotive pilot will be provided at each end of the cars, so arranged as not to interfere with the radial draft rigging. Each car will be equipped with two lavatories, complete with all up to date fittings.

In deciding on the specification details of these cars, the desire was to obtain as light a car as possible, consistent with absolute safety. The original approximate weight for the cars was 104,729 lb., but careful calculation and refinement of design, enabled the engineers to adjust the specifications and reduce the weight to 102,459 lb. The body weight of the car per foot length works out at 710.47, and the body and equipment weight per foot length is 1,463.7 lb. The average weight per car foot length for steam railway cars of similar length, complete with trucks, etc., is somewhere about 1,300 to 1,500 lb. The total dead load carried on the two side plates is 61,720 lb., and the live load 15,000, making a total of 76,720 lb. This load is divided as follows—on the centre span 55,000 lb., carried on the overhang 21,720 lb. The load carried on each beam at each end is 5,430 lb., the total load on each beam being 38,360 lb. The web is being stiffened against buckling, by the application of stiffeners at the ends and inner edges of bearing plates at all points of concentrated loads, and also at intermediate points, and not farther apart than the depth of the full web plate, with a minimum limit of 5 ft., the actual minimum distance between stiffeners being 2 ft. 10 in., and depth of web 3 ft. 0 1/2 in. The specifications adopted give maximum capacity of 3,671 moment of inertia, an excess on safe side of 1,509; 12,500 vertical shear, an excess of 11,100; stiffeners every 2 ft. 10 in.,

2 3/4 in. closer than required, and 0.00278 of span deflections, an excess over maximum demand of 0.00108 of span.

In construction generally, the details are the same as for the cars now in operation, all of which were fully described and illustrated in Canadian Railway and Marine World for Jan. 1915. The chief difference between those cars and the ones herein described, is in length, where an additional 10 ft. 7 in. is obtained. Among the improvements are, larger and more convenient lavatories, large water cooler with sanitary drinking cups, rubber tiling for flooring of lavatories, rubber matting over trapdoors, heavier fittings generally throughout the car, sliding doors leading from platform to main car body, spring buffers at each end of car, steps at both ends, larger doors of the sliding type over steps leading into the baggage compartment, two collapsible seats in the baggage compartment and trainman's locker, in addition to a few slight changes in design tending toward lower maintenance cost and general efficiency.

An order has been placed with the Jewett Car Co., Newark, Ohio, for two cars according to this specification, and the electrical equipment, which is practically the same as that supplied for the cars now in operation, has been ordered from the Canadian General Electric Co. Delivery of the cars is to be made by June 1.

The Ontario West Shore Railway Difficulty.

An engineer representing the Hydro Electric Power Commission of Ontario was reported, on Nov. 16, to be going over the old Ontario West Shore Ry. route from Goderich toward Kincardine, Ont. This is the railway partially built by a company, the controlling power in which was exercised by J. W. Moyes, Toronto, upon the proceeds of bonds guaranteed by the municipalities through which the line was to run. The municipalities are paying up on the bonds and have the uncompleted line as an asset. The object of the present survey is to ascertain the cost of completing the line and putting it in order for operation.

It is reported that the C.P.R. is interested in getting the line in operation and is prepared to offer a free right of way over the Maitland River bridge in return for freight shed privileges uptown. From the south bank of the Maitland River the route into Goderich would be along the river bank to the north end of Cambric Road.

Handling "Near Accidents."—In Buffalo, N.Y., conductors and motormen report license numbers of automobiles whose drivers are reckless, or who are responsible for "near accidents." The International Ry. safety committee communicates with the owner of such automobile, and if a second report is received against the same driver, the matter is taken up with the police department. It is expected that results mutually beneficial to both the railway company and auto owners will follow.

Three Rivers Traction Co's Lines and Equipment.

In the article under the above heading in Canadian Railway and Marine World for November there were three unfortunate errors. It was stated that with the opening of the Cap de la Madeleine extension the company would have in operation 42 miles of track. The omission of a decimal point between the 4 and 2, in the information supplied us, was responsible for the error. We have since been officially advised that the company's track mileages, incorporating extensions made from time to time since the original line was opened, are as follows: City belt line, 2.80 miles; Cap de la Madeleine subdivision, 3.85 miles; Wayagamack branch, 0.36 mile; total track mileage, 7.01. The Cap de la Madeleine subdivision and the Wayagamack branch, which starts from it, together make 4.21 miles.

The Cap de la Madeleine extension was spoken of as terminating near the Union Bay Co.'s large new paper and pulp plant. The Union Bag Co. is the owner of the plant referred to.

The additions to the company's rolling stock were spoken of as "rear-side" cars, instead of near-side.

London and Port Stanley Railway Operating Results.

A report prepared under the direction of the London, Ont., City Auditor gives the following figures for the first year of the L. & P. S. Ry's operation as an electric line by the London Railway Commission:—

Passenger earnings	\$112,173.49
Freight earnings	150,920.81
Miscellaneous earnings	11,964.02
Total gross earnings	\$281,058.32
Operating expenses	180,619.88
Net earnings	\$100,438.44
Taxes	\$ 6,962.64
Interest	40,786.29
Rental to city	20,000.00
Sinking fund	8,775.79

76,524.72

\$23,913.72

The commissioners donated \$1,300 to the British Red Cross Society and paid off \$4,139.58 sinking fund charges which accrued during the reconstruction of the line.

Safety First Prize Sentences.

In order to interest the Victoria school children in the safety first campaign, the British Columbia Electric Ry. offered prizes for the best sentence of 11 words arranged as an acrostic of safety first. Two prizes were offered, but owing to the number of competitors, the company added five more. The awards were made for the following sentences:—

"Street accidents follow every thoughtless youngster foolishly impeding street trams."

"Sense and foresight ensure the young from injury, reducing street tragedies."

"Strict attention, for every time you forget, it represents sudden tragedy."

"Sound advice. Fathers educate the young fellows in respecting street traffic."

"Safety always first explains that your force invariably remembers schoolboy thoughtlessness."

"Serious accidents frequently ensue through young folks ignoring rules stipulated therein."

"Steer aisy, Flanigan! Else 'tis yer funeral I'm reporting sometime tomorrow."

Electric Locomotive for Oshawa Railway.

The Oshawa Ry., Oshawa, Ont., has added to its rolling stock a 25 ton switching locomotive, which is illustrated herewith. Its principal dimensions are:—

Length of body	23 ft.
Length over all, about	27 ft.
Truck centres	12 ft.
Wheel base of trucks	4½ ft.
Width over all	9 ft.
Length of cab	7 ft.

The underframe is built entirely of steel; the sills are 10 in. channels at 20 lb., with heavy angle diagonal braces rivetted to large gusset plates; the underframe is filled with concrete mixed with steel punchings, instead of stone, in which is imbedded old "T" rails, to give additional strength and traction weight. The cab is built of wood, as are also the

Oshawa Railway's Electric Locomotive.

sloping housings at the ends, which house the air compressor reservoirs at one end, and the rheostats at the other end.

The locomotive is equipped with a Westinghouse 101-B-2 quadruple motor equipment, with one L-4 controller arranged in either direction without the motorman changing his position. The air brake equipment consists of a Westinghouse No. 6-E-T double end equipment, with one independent and one automatic brake valve, placed near the controller, and all the small parts, such as governor, distributing valve, feed valve, reducing valve and equalizing reservoir placed in the cab, with all piping open and easy to get at. The two gauges are mounted on an iron bracket, which is bolted to the iron brake valve stand, which brings the gauges over the brake valves. The locomotive is mounted on 76-E trucks with 33 in. cast iron wheels; it is also equipped with Ohio Brass air sanders, poling sockets, also a special M-C-B coupler at each end, and one rotary gong mounted on one end of the cab. It was built by Ottawa Car Manufacturing Co., Ottawa, Ont.

The Three Rivers Traction Co. has received 2 single end and 1 double end single truck, one man p.a.y.e. cars from Ottawa Car Manufacturing Co.

The Hull Electric Co. will give a 15 minute service on the new loop line to be built in Hull, Que., immediately.

An Alien's Right to Sue as Tutor Questioned in Quebec.

The Court of Appeal, sitting in Montreal in October, heard the Montreal Tramway Co.'s appeal against a verdict in the Superior Court awarding \$2,000 to Peter McAllister as tutor of Francis McAllister, injured in a tramway accident. The latter was a student at Loyola College, and the accident occurred in front of the M.A.A.A. grounds at Westmount. Counsel for the company contended that the victim of the accident was born in Ithaca, N.Y., and still resided there at the time of the accident; that his tutor and father also was a United States subject, residing in Ithaca. The victim was a minor, under the Quebec law, being less than 21 years of age. Under the Quebec law, minors cannot sue before the courts

to recover damages resulting from personal injuries, and their proceedings must be entered in the name of a tutor appointed to them for that purpose. An alien, as in the present case, a United States subject, cannot be appointed a tutor under the Quebec laws, as this is considered a public function to which only British subjects can be appointed. The father of Francis McAllister having been appointed a tutor by a Quebec court, his appointment was totally illegal and could not be considered as having given him any status before the Quebec courts.

The respondent, through counsel, answered this by stating that the personal legal status of the victim of the accident was ruled by New York State laws, and even if the father of the victim had been illegally appointed tutor by a Quebec court, he had been appointed guardian and guardian ad litem by a New York court, and the Quebec Civil Code, acknowledged, at least, the latter status by article 6. Judgment was reserved.

The Montreal Board of Control, on Nov. 16, decided to consult with the city engineers upon the desirability of granting the Canadian Northern Ry.'s application for the stopping of street car traffic on Dorchester St. while a bridge is being built and the work done in connection with the building of the C.N.R. terminal station.

Sandwich, Windsor & Amherstburg Railway Employees Wages.

Canadian Railway and Marine World for November contained particulars of demands made by Sandwich, Windsor & Amherstburg Ry. employees, which were submitted to a board of investigation and conciliation under the Industrial Disputes Act, its members being the county judge of Essex as chairman, E. G. Henderson, of the Windsor Salt Co., representing the railway, and Magnus Sinclair, of Toronto, representing the men. As the result of the board's work, a new agreement was entered into between the company and the men, to be in force from Oct. 1, 1916, to Apr. 1, 1918. The following table shows the hourly wages paid up to Sept. 30, the wages asked by the men, and the wages agreed on by the arbitrators:

	Old.	Asked.	New.
First 6 months	25c	27 1/2c	28c
Second 6 months	26c	32 1/2c	29c
Second year	27c	35c	31c
After second year	28c	35c	32c

An additional allowance of 1c an hour, exclusive of overtime, is to be paid to all conductors and motormen in lieu of uniforms. Caps and badges will be supplied free by the company, and all men must be in suitable uniform, clean and tidy when on duty. The day's work for all conductors and motormen is from 9 to 10 hours, to be completed within 12 consecutive hours as far as possible. The runs are to be as nearly equally divided as possible between two crews, to be known as early and late runs, and when practical the present schedule shall be arranged to provide for this. Conductors and motormen will not be required to perform extra work in excess of the regular schedule of 10 hours work, except in cases of necessity, and for such extra work shall receive 4c an hour extra. Conductors and motormen training students shall be allowed 25c a day therefor while so engaged. Spare men must be at the barn for work at 5.45 a.m. and at 4 p.m. Those who fail to procure work shall be allowed one hour for such attendance, either morning or afternoon.

The other principal points in the agreement are summarized as follows: Should any difficulty arise out of the agreement or should any other matter arise which is not provided for in the agreement, the company's officers shall at all reasonable times here such representatives as the employees may nominate from their own number, regardless of the fact that they may be members of a committee or members of a division of the Amalgamated Association of Street Railway Employees of America. The company will not discriminate against any employee for being a member of the Amalgamated Association of Street & Electric Railway Employees of America, and any employees who are members of any committee of the employees, or are officers of any association of employees, or delegates to conventions of street railway men, shall be entitled to leave of absence to do committee work or attend conventions without losing any privilege. Any employee against whom charges may be received will be required to report when off duty to the Superintendent. His case will be considered by the proper officers and dealt with according to the company's rules, but any employee against whom a charge is made shall have the right to appeal to the General Manager or President, and may take with him any committee or delegation of his fellow employees and if upon investigation it is proved that there was not sufficient cause for his suspension or dis-

missal he shall be reinstated in his former position and paid at schedule rate for all time lost. All cars are to be cleaned, oiled, and equipped, and fires laid by barn men at Windsor barns prior to car men taking out cars for their runs. All cars are to be properly equipped with good brakes, fenders and modern sanders, as required by the Ontario Railway Act.

Magnus Sinclair, the men's representative, in signing the unanimous report of the board endorsing the agreement as entered into, reserved the right to make an additional report as to the question of recognition of the American Association of Street and Electric Railway Employees of America. In a lengthy report he said that on receipt of the men's demands as printed in Canadian Railway and Marine World for November, James Anderson, General Manager, stated that while the company would not recognize any organization of the employees, it had no objection to their belonging to any organization and that it would not discriminate against them therefor, but that it would not enter into an agreement that would compel the employees to join any union. He charged that two employees, L. Salive and F. Fields, had been dismissed by Mr. Anderson because they circulated a petition among their fellow employees asking for an increase in wages, but added that they were reinstated. Mr. Sinclair also contended that the Detroit United Ry., which owns and controls the Sandwich, Windsor & Amherstburg Ry., has agreements with the other four groups of its employees which are made with the local unions, and he protested that the Sandwich, Windsor & Amherstburg Ry. employees were being discriminated against.

The British Columbia Electric Railway and the Jitney Business.

The Vancouver City Council's application to the British Columbia Electric Ry. recently for a reduction in rates for domestic electric lighting in the city brought out some discussion on the jitney situation. The chairman of the special committee which had interviewed the company's management on the matter reported that the officials said it was impossible to give a lesser rate for power used for domestic lighting purposes as the company's annual interest on the bonded indebtedness, amounting to \$960,000, was compared with \$850,000 gross revenue received from June, 1915, to June, 1916, which showed a net loss of \$110,000. This General Manager Kidd assured them would be still further increased in the coming year in all likelihood, because the company's new agreement with its employees called for additional wages amounting to \$120,000.

Alderman Gale, supplementing the report, said the company's officers practically refused to reduce the rates unless the council would enact legislation regulating the jitney traffic along lines similar to that regulating corporations. The company was undoubtedly losing money every day in consequence of the jitney traffic.

Alderman Woodside said there was another aspect to the jitney traffic and that was the question of street maintenance. Jitneys were rapidly destroying the pavements especially at crossings.

Alderman Mahon said the jitney traffic was being operated at a loss of revenue to the city. The B.C.E. Ry. paid a percentage of its revenue to the city and, according to his calculations, if it had not been for the jitney traffic the percentage

receivable by the city would have increased from the 5% for 1915 to 6% in 1916. The loss of this 1% was a serious matter for the city.

As a result of the discussion a special committee, consisting of Aldermen Mahon, Gale, Kirk and McIntosh, was appointed to procure exhaustive data in respect to the jitney traffic, what benefits the city was actually deriving therefrom and any other matter which the investigation might bring forth. The subject matter of the report will be brought before the city council upon a motion, notice of which was given, to amend the jitney bylaw. The special committee met the jitney men, Nov. 9, to discuss the matter, officials of the B.C.E. Ry. being asked to be present.

The company's attitude on the jitney situation is expressed in a letter from G. Kidd, General manager, read to the city council recently, in connection with the second tracking of Hastings St. East. He said: "I regret to inform you that the attitude adopted by the municipal authorities in refusing to adequately control the jitney traffic in the same way as my company is controlled under acts passed by the Provincial Legislature and under its various agreements with the city and surrounding municipalities, has prejudiced our credit to such an extent that it is now altogether impossible for us to consider any question involving further expenditure on our street railway system.

"The attitude of my company in this connection is the same as that adopted by all street railway companies on the continent, and is fully recognized by public service commissions and other authorities which have inquired into the jitney traffic. In support of this statement I enclose a print of the decision of the Up-State Public Service Commissions of New York, which prohibited jitneys from operating along substantially the same routes as street cars in Rochester. The following extracts from the decision would apply in Vancouver as well as in Rochester:

"We are of opinion that the electric railway must for many years be regarded as the backbone of any dependable transportation system in such a city. To arrest the development of its electric railway would be to injure greatly the city's growth and future prospects. In our opinion no dependable form of transportation, good alike in winter and summer, has yet been devised to take the place of what this city would lose if further development of its electric railway was to be discouraged and interfered with by the state. Protection is being extended it (street railway system), now because we feel that on the whole the existing street railway system of this city, viewed not as a mere money-making machine, operated for the benefit of its stockholders, but as a public agency, is distinctly worth saving in the interests of the people."

"In other words, the commission referred to realizes that the public cannot have an adequate street car service and unregulated jitneys existing side by side. The public must choose which service they prefer and if they decide to favor the jitneys by releasing them from obligations which they impose on the tramway company, then they must sooner or later realize that all development work by the tramway company must cease."

The Hull, Que., city council, on Nov. 9, authorized the remission of the second business tax of \$1,000 imposed for the first time this year, on the Hull Electric Co.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford and Hamilton Ry.—We are officially advised that the extension from Market St., the present terminus of the company's line in Brantford, to the Lake Erie & Northern Ry station is 1,500 ft. This extension is now being built upon the company's own right of way. E. P. Coleman, Hamilton, Ont., is General Manager. (Nov., pg. 460.)

Brantford Municipal Ry.—We are officially advised that the extension of the track on Morrall St., in the Holmedale district, Brantford, Ont., for 1,100 ft. is in progress. (Oct., pg. 425.)

British Columbia Electric Ry.—A letter from the company was read at a meeting of the Vancouver City Council, Oct. 24, declining to comply with the council's request of Oct. 7, to construct a second track on Hastings St. East, from Renfrew St. to the city boundary. Notwithstanding this the council's Railway and Bridges Committee decided, Nov. 2, to ask the city council to renew the request.

A good deal of track repair work has been done during the autumn on the Fraser Valley line. Road crossings have been repaired, and on long stretches of the track new ties have been put in and additional quantities of ballast spread. (Nov., pg. 460.)

Calgary Municipal Ry.—We are officially advised that half a mile of single track is being built to connect with the north section of the city over the new Centre St. bridge. The opening of this route will save a mile ride between the two outside sections of the city as compared with the present route via West Calgary. For this purpose the city has purchased 30 tons of 80 lb. rails from the City of Lethbridge. T. H. McCauley is General Superintendent, Calgary, Alta. (Oct., pg. 425.)

Edmonton Radial Ry. We are officially advised that there is no truth in a recent press report that the city council was about to expend \$75,000 upon extensions. All the extension work contemplated is an 1,800 ft. piece of track to Elm Park, the estimated cost being \$2,500, and for which most of the material is in stock. A. G. Harrison is City Commissioner. (Nov., pg. 460.)

Hull Electric Co.—We are officially advised that the improvements, second track work and extensions which it is proposed to carry out in Hull, Que., are as follows: A second track on Montcalm St. and Chelsea Road; a loop on Chelsea Road, Mountain Road, Second Ave. and Montcalm Ave. The length of second track to be laid is 8,660 ft., and of loop line, 4,800 ft. The city council, on May 9, authorized the signing of the contract covering these alterations. G. Gordon Gale is General Manager. (Oct., pg. 425.)

Halifax Electric Tramway Co.—In an address before the Halifax Commercial Club recently, H. R. Mallison, of Montreal, Secretary to the President, H.E.T. Co., stated that exclusive of the proposed hydro electric power development at Gaspereaux, N.S., the company was spending \$1,500,000 upon the improvement of the gas, electricity and tramway plants in the city. The steam plant for the production of electric power was being doubled, so that when the hydro electric power plant was in operation there would be ample reserve to prevent any interruption of Gaspereaux plant.

The company's tramway lines had been spread out in various parts of the city

wherever business was available and in some cases lines had been built over territory which, under ordinary circumstances, would be considered unprofitable. Certain improvements in the service had been inaugurated during the past year and others were in contemplation. The general conditions of service might be materially improved. Owing to changed conditions in the city the lines as originally laid out do not prove to be the most convenient and direct routes for serving the population. The conditions in the city were still changing, largely owing to the construction of the new ocean terminals for the Intercolonial Ry. As a preliminary step towards the general rearrangement of the lines application had been made to the city council for permission to remove the present single track curves on Hollis, George Granville and Buckingham Sts. This would cost a considerable amount, but was necessary in the general interests of the public. Other work in this direction was in contemplation, but as the plans had not yet been approved by the directors, he was not in a position to say anything about them. (April, pg. 156.)

Montreal Tramways Co.—The discussion of the proposed new franchise for the company is still being carried on by the Board of Control. Questions dealing with the service, such as the frequency and speed of cars on the several lines; the fares and conditions connected therewith; the number of passengers to be carried per car, and of extensions of lines have been discussed and certain preliminary understandings reached. The question of the extension of lines was under discussion Nov. 9. The board decided in favor of the following extensions which were among those recommended by G. R. MacLeod, the city's engineer in charge of railway matters:—Atwater Ave., across the G.T.R. tracks and the Lachine Canal to Centre St.; Charlevoix St., from Centre St. to Wellington St.; from Van Horne Ave. via Park Ave., Beaumont and Brenner Sts. to Abraham Ave.; Davidson St., from Ontario St. to Notre Dame St.; Dickson St., from Notre Dame St. to Boyce St. The company objected to the first named extension on the ground of its having to be constructed across four G.T.R. tracks, and it was suggested that the Board of Railway Commissioners would order the necessary safety devices to be installed or that an arrangement might be made to carry the street railway tracks across the steam railway by a bridge. The widening of Dickson St. to 66 ft. was suggested, the company to give the land through one of its controlled concerns which owns it. Other extensions were discussed but no decision reached in regard to them. It was resolved that the city and other public bodies should unite in approaching the Dominion Government to secure aid towards the construction of certain tunnels necessary in connection with the extension plans, which are estimated to cost \$2,300,000. These are to be located at Wellington St., estimated to cost \$1,300,000, and at Charlevoix on Atwater Ave., estimated cost, \$1,000,000. (Nov., pg. 460.)

It is reported that the company will erect an overhead bridge on Fortification Lane, Montreal. (Nov., pg. 464.)

Oshawa Ry.—We are officially advised that the contract for building the new heating chamber at the company's plant, Oshawa, Ont., has been let to R. Wallace

for \$1,400, and that the contract for the heating plant has been let to G. T. Lander, Oshawa, for \$1,600. H. W. Cooper is Manager, Gananoque, Ont.

Ottawa Electric Ry.—Petitions are being extensively signed asking the municipalities interested to arrange with the company to extend its line to Notre Dame Cemetery. The matter came before the Eastview Town Council some time ago, when the company informed that body it would not extend the line until it had an extension of its franchise.

Port Arthur Civic Ry.—We are officially advised that it is contemplated to resurface the tracks on Cumberland St., from McVicar St. to Arthur St., and to replace the present rail joints with 100 lb. joints. M. M. Inglis is Manager, Port Arthur, Ont. (Aug., pg. 338.)

Saskatoon Municipal Ry.—The new bridge at Twenty-fifth St., Saskatoon, built by the Saskatchewan Government, the city paying one-third of the cost, was opened for traffic Oct. 31. A double track for electric railway operation is laid over the bridge, but it is not intended to put up the overhead wires for the running of cars until the spring.

Sudbury-Copper Cliff Suburban Electric Ry.—The Board of Railway Commissioners had before it at Ottawa, Nov. 7, the company's application for an order apportioning the cost of straightening the Nelson St. bridge, Sudbury, Ont., and authorizing the company to operate its electric railway over it. (Oct., pg. 425.)

Toronto Suburban Ry.—We are officially advised that construction on the extension from Lambton to Guelph, Ont., is practically finished, there remaining only two sidings and a Y at Guelph to put in. The material has been ordered for all of the overhead work, and the stringing of the wire was commenced at the Guelph end Nov. 3. It is the company's intention to take power from the Toronto & Niagara Power Co. at Islington, where a substation is to be built. This substation, for which the greater part of the material has been delivered, will be of galvanized iron with concrete floor. Some of the cars, which are being built at Preston, Ont., are expected to be delivered early in December. It is expected that everything will be ready so as to permit the operation of the line to Guelph early in Jan., 1917.

Transcona, Man.—At a meeting of the St. Boniface, Man., City Council, Nov. 14, it was stated that the Winnipeg Electric Ry. was negotiating with the Transcona Town Council in regard to building an electric railway to serve that town.

Work is Reported to Have Been Started at Calabogie, Ont., upon the development of an electric power plant at the foot of Lake Calabogie, an expansion of the Madawaska River. It is expected to develop 5,000 h.p., and to transmit the power either wholly or partly to Renfrew, a distance of 20 miles. Mr. J. O'Brien is the principal promoter of the new plant.

Toronto Civic Ry. Wages.—On Oct. 1 the wages were advanced as follows:—Conductors and motormen increased from 27¼c to 30c for week days and from 31¼c to 34c for Sundays. Car repairers and shedmen increased from 27¼ to 30c for week days and from 30¼c to 32½c for Sundays. No difference in pay is made on account of length of service.

Moose Jaw Electric Railway Employees Wages.

On application by the Moose Jaw Electric Ry. conductors and motormen, members of the Amalgamated Association of Street & Electric Railway Employees of America, Division 614, a board of investigation and conciliation under the Industrial Disputes Act was appointed by the Minister of Labor recently. The men's complaints were in regard to wages, hours of labor, working conditions and nonrecognition of the union. The wages paid up to Dec. 16, 1914, were as follows per hour: 1st 6 months 27½c, 2nd 6 months 30c, 2nd year 32½c, 3rd year and after 35c. From that date the company reduced the wages 10%, stating that the reduction was due altogether to conditions which were prevalent throughout the country and that as soon as times changed for the better the reduction would be removed. In February, 1915, a further reduction of 5% was made, making a total reduction of 15%. The company contended that conditions had not improved sufficiently to warrant it in fully restoring the rates paid prior to Dec. 16, 1914, but on July 21, 1916, issued a bulletin stating that the rates from July 16 would be: 1st 6 months 26c, 2nd 6 months 26½c, 2nd year 27½c, 3rd year 30c. The men not being satisfied, the company on Aug. 31 offered the following rates: 1st 6 months 26c, 2nd 6 months 26½c, 2nd year 28½c, 3rd year 31c. The men refused this offer and applied for a board of investigation, etc., at one of the meetings of which the men's representative suggested the following rates as a compromise: 1st 6 months 26c, 2nd 6 months 27c, 2nd year 29c, 3rd year 32c. The company, through its Superintendent, expressed its willingness to pay 5c an hour extra on legal holidays. The matter was then submitted to the men at a meeting, when they repudiated their representative's offer of a compromise and decided to leave the matter to the board. The board being unable to agree, the chairman, J. H. Wellington, and the men's representative, Jas. Somerville, presented a majority report embracing a draft agreement fixing the wages up to August, 1917, as follows: 1st 6 months 26c, 2nd 6 months 27c, 2nd year 29c, 3rd year 32c.

The agreement embodied in the board's report was drafted to be made between the company and the Amalgamated Association of Street and Electric Railway Employees of America, as representing the men affected by it. It also provided that 9 hours should constitute a day's work and should be observed as far as operating conditions would permit. Five cents an hour to be paid for statutory holidays. Conductors and motormen to be allowed 15 minutes for reporting time prior to taking cars out and 15 minutes additional time for pulling away cars taken out of the service. Seats to be supplied by the company on all cars for conductors' and motormen's use when on duty, except in restricted areas. Conductors to be advanced \$30 for purchase of tickets and for change, and to have badges entitling them to transportation at all times over all lines. Other provisions were that the company had no objection to an employee being a member of the Amalgamated Association of Street and Electric Railway Employees of America, and would not discriminate against him therefor. The company to recognize a committee of the men in discussing any grievances of employees. Any employee suspended or dismissed to be reinstated if on investigation it be shown that he was not guilty

of the cause alleged.

The third member of the board, Jas. Thomson, representing the company, presented a minority report, in which, after stating that all the company's receipts were being paid out for operation, and that no dividends had been paid for two years, he contended that the company's offer of 26c, 26½c, 28½c and 31c, according to length of service, was exceedingly fair, and that he could not agree to recommend any higher rate. The conductors and motormen agreed to accept the board's majority report, but the company stated that the same was unacceptable in many respects.

Regina Municipal Railway Earnings.

Earnings, expenses, etc., for September and October, and for 10 months ended Oct. 31:—

	Sept.	Oct.	Jan. 1 to Oct. 31, '16.
Gross earnings	\$14,742.46	\$17,890.99	\$169,728.96
Expenses	13,737.96	13,232.98	156,575.50
Net earnings	1,004.50	2,658.01	13,153.46
Capital charges . . .	8,022.96	8,022.95	80,229.60
Deficit	6,977.15	5,364.94	68,159.48

Exp. percentage without capital charges			85.14%
Exp. percentage with capital charges			129.98%

The Relationship of Public Utilities to the Public.

In an address before the Halifax Commercial Club, Oct. 26, H. R. Mallison, of Montreal, Secretary to the President, Halifax Electric Tramway Co., said among other things:—

"The relations between a public utility and the general public, particularly when that public utility operates both tramway, electric light and gas services, is one that is full of complications of all sorts. There is no doubt that the relations between the public utility and the general public are never very pleasant or favorable ones, for the reason that the public utility makes too generous an effort to please all its clients; while on the other hand, the general public seems to think that the public utility simply takes away their money, pays no wages or other expenses, and gives the public nothing in return.

"Under present day practice, the owners of public utilities have really very little to say with regard to the conduct of their business, and the general public has a great deal to say as to how the utility shall conduct itself: what it shall do and how much it shall charge for its services rendered. This situation arises through the operation of the public utilities commissions, and the every action of the public utility, whether it be the class and amount of service rendered, the price it shall charge for the services rendered, what revenue, if any, the owners of the property shall receive on their investment, how much capital they shall issue upon their properties, and how they shall expend that capital, is all subject to the will of the people of the community, through the rules and regulations laid down by the public utilities commissions.

"Considering these conditions it should be seen that the general public,

instead of continually obstructing the progress of the public utility in any city, should, for their own best interests, aid the utility to conduct its business as economically and as satisfactorily as possible."

Mainly About Electric Railway People.

Lieutenant Governor McKeen, of Nova Scotia, who died at Halifax, Nov. 13, was formerly President, Halifax Electric Tramway Co.

W. D. Reid, Traffic Manager, and F. Phillips, Master Mechanic, Port Arthur Civic Ry., have been appointed examiners of motormen.

W. N. Myles, who was Manager of the Hamilton & Dundas Ry. some years ago, died in St. Joseph's Hospital, Hamilton, Ont., Nov. 2, aged 69, after an illness of several weeks.

Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., is to command another battalion of the Queen's Own Rifles, Toronto, which is to be organized for overseas service.

Thomas Ahearn, President, Ottawa Electric Ry., is said to hold the record for the fastest run by motor between Ottawa and New York, viz.: 458 miles in 13 hrs. 20 min.

W. T. Woodroffe, formerly Superintendent, Edmonton Municipal Ry., and prior to that in the British Columbia Electric Ry. Co.'s service, whose death was reported in our last issue, enlisted in the 51st Battalion at Edmonton, Alta., as a private in the autumn of 1915. The battalion was broken up in England and the men drafted into various other battalions on active service, during which Mr. Woodroffe received two stripes. It is believed that he was in the 29th Battalion of Edmonton when he fell.

J. P. McKenzie, Assistant Superintendent and Electrical Engineer, Saskatoon Municipal Ry., left Saskatoon, Sask., Nov. 8, 1916, for St. Johns, Que., having been appointed a lieutenant in the Canadian Engineers, C.E.F. He was appointed Master Mechanic when the Saskatoon Municipal Ry. started operating in Dec., 1912, and was promoted to Assistant Superintendent and Electrical Engineer in Jan., 1916. H. Swail has been appointed Assistant Superintendent (Transportation), and A. Gardiner, Secretary. A. M. Murray, heretofore Foreman of Barn, has been appointed Master Mechanic and Engineer in charge of Overhead.

Safety Equipment, Windsor, Essex & Lake Shore Rapid Ry.—The Board of Railway Commissioners issued order 25613, Nov. 3, directing the Windsor, Essex & Lake Shore Rapid Ry. to equip its 6,600 volt motor cars and locomotives with pneumatic or other suitable pantagraph controlling devices, so that employees may, from within the interiors of the cars and locomotives, lower and release, or raise the pantagraphs. These devices are to be installed within six months, and beginning with Apr. 15, 1917, the remainder of the motor cars and locomotives are to be equipped with the device, a period not exceeding two months being allowed in each case for the equipment of each car and each locomotive.

The Sandwich, Windsor & Amherstburg Ry. has ordered 2 single end, double truck cars, equipped with air brakes, to be built in Cleveland, Ohio.

During October, 2,194,594 passengers were carried on the Vancouver city and suburban lines, a decrease of 55,956, as compared with Oct., 1915. The percentage paid to the city for traffic on the city lines was \$3,816.25, making an aggregate paid the city for 10 months ended Oct. 31, of \$29,878.60. The mileage run on the Vancouver system for October was 565,610, compared with 562,969 for Oct., 1915.

It is announced that W. A. Reid & Co., New York, have purchased and resold \$1,250,000 gold notes bearing interest at 6%, \$500,000 maturing Dec. 1, 1917, and the balance Dec. 1, 1918.

Toronto & York Radial Ry.—The Mayor of Toronto stated to the Board of Control recently that he had had a conference with Sir Adam Beck regarding the proposed purchase of the Toronto & York Radial Ry., Metropolitan Division, by the Hydro Electric Power Commission

of Ontario, in accordance with the council's resolution of Dec., 1915, and was informed that negotiations are proceeding and are still pending, and are part of the general hydro radial programme which has been more or less delayed because of the war and the financial situation, but that satisfactory progress is being made.

Electric Railway Notes.

The Vancouver Trades and Labor Council has asked the Vancouver City Council to compel the British Columbia Electric Ry. to place heaters in all new street cars.

The assessment placed upon the Montreal Tramway Co.'s plant, etc., for city taxation during the past year was \$5,519,455, made up of land, \$2,361,160; buildings and plant, \$1,955,025; plant on streets, \$1,203,270.

The military authorities are discussing with the Regina, Sask., City Council an arrangement whereby soldiers in uniform quartered in the city during the winter will be carried at reduced fares on the Regina Municipal Ry.

The Quebec Ry., Light & Power Co. is building in its shops at Ste. Anne de Beaupre, 2 double truck cars of the p.a.y.e. type, 40 ft. long over all, for city service. They will be numbered 654 and 655, and will be equipped with S.W.B. double trucks and T.M.C. steel tired wheels, Westinghouse 101-B-2 quadruple motor equipment and Westinghouse S.M.E. air brakes.

The Lake Erie & Northern Ry. obtained an order in an Ontario court, Nov. 13, appointing arbitrators to fix the compensation to be paid by the City of Brantford for lands taken on Jubilee Terrace. The Parks Board of the city council asks \$15,000, and the company offers \$1. Judge Hardy will act as arbitrator for the city; A. E. Watts, K.C., for the company, and Judge Snider, Hamilton, will be Chairman.

In order to relieve congestion of traffic at the corner of Hastings and Main Sts., Vancouver, the British Columbia Electric Ry. has placed an extra conductor there between 4.30 and 6.30 p.m. on week days and between 12.30 and 1.30 p.m. on Saturdays, to collect fares and see people at the front end of the cars while the regular conductor does the same at the rear end. This gets the cars filled more quickly and dispatched faster.

The Board of Railway Commissioners has dismissed an application by Major G. T. McKeough for an order directing the Chatham, Wallaceburg & Lake Erie Ry. to give to persons carrying on business or professions in Chatham, Ont., but living in portions of Raleigh and Harwich Tps., served by the railway, and also to their families, a rate not to exceed 25c for a round trip ticket when such tickets are bought in book form as commutation tickets.

In connection with the 13 double truck, double end operation cars which are under construction for the Toronto Civic Ry. by the Preston Car & Coach Co., all the contracts for equipment were placed at the same time as that for the bodies, except those for gears and pinions and air brake equipment. These have since been placed, for the gears and pinions, with

Allen General Supplies, Ltd., at \$121.60 a car set; and for the air brake equipment, with Canadian Westinghouse Co., at \$365.60 a car set. In quoting the average price per car, at the time of placing the contracts, at \$8,620.50, the gears and pinions were estimated at \$108.98 a car set, and the air brake equipment at \$350 a car set.

Calgary Municipal Ry. Earnings.

Following are the earnings, expenses, etc., for September, compared with those for Sept., 1915, and aggregate for 9 months ended Sept. 30, 1916 and 1915:—

	1916.	1915.
Total revenue	\$48,486.32	\$41,972.30
Operating expenses	29,246.43	29,779.18
Net earnings	19,239.89	12,193.12
Fixed charges	16,910.26	16,187.94
Surplus	2,329.63	—
Deficit	—	3,994.82
Mileage	220,772	209,265
Passengers carried	1,116,575	990,875
Revenue per car mile	21.962c.	20.056c.
Expenses per car mile	13.44c.	14.23c.
Expenses per car hour	\$1.32	\$1.52
Power per car mile	3.364c.	3.474c.
Average fare	4.278c.	4.093c.
Operating expenses to revenue	67.4%	70.8%

	9 months to Sept. 30, 1916.	9 months to Sept. 30, 1915.
Total revenue	\$446,325.96	\$409,723.85
Operating expenses	266,652.91	272,324.13
Fixed charges	163,367.37	146,351.13
Surplus	16,305.68	—
Deficit	—	8,951.41

The Jitney Situation in Vancouver.—The Vancouver Social Service Council has been taking up the question of the jitney service recently and has begun an active crusade for more effective regulation upon moral grounds. It asks particularly for the prevention of overcrowding and for the internal lighting of all cars. The public authorities in every place where jitneys are being operated are being invited to join in taking action to prevent the extension of immorality through the jitney traffic. The Vancouver police have been instructed to enforce the existing regulations more rigidly than in the past, and the whole question of the regulation of the traffic is under consideration by a subcommittee. The British Columbia Electric Ry. is objecting to the jitney traffic on the ground that it is an unfair competition. The Jitney League and the Jitney Protective Association, the two organizations of jitneymen, decided, Oct. 28, to amalgamate their forces for the better protection of their interests.

Buffalo Night Service.—The International Ry. Co., of Buffalo, N.Y., started an innovation recently, as far as owl car service is concerned, which will be a great benefit to patrons. On main lines a 30 min. service is maintained, and hourly service on other lines. In order that patrons may know when to expect a car at a certain point, arrangements have been made whereby a person may call up the dispatcher, who has before him the various schedules and arriving times at the transfer points. He is thus able to estimate the arriving time at any given point on any line.

Postmen's Transportation on Regina Municipal Ry.—Commencing Nov. 1, the Regina Municipal Ry. ceased to carry postmen except upon payment of regular fare. Under the former contract they were carried for \$25 a man per year, which the management found was giving the railway only a trifle over 1c a ride. The City Commissioner therefore asked \$50 a year, which the Post Office Department refused to give, offering \$35 instead.

Marine Department

Government Vessel Building at Sorel.

Following are particulars of vessels which have been built this year, or are being built at the Dominion Government's shipbuilding yard at Sorel, Que., of which W. S. Jackson is Superintendent:—

Coal Barge No. 6 has the following general dimensions:—Length between perpendiculars 165 ft.; length over all 172 ft.; breadth moulded 32 ft.; depth

perpendiculars 77 ft.; length over all 85 ft.; breadth moulded 18 ft.; depth moulded 7 ft.; deadweight 21 tons; speed 9½ miles. She is composite built, having steel framework, with planking of rock elm below waterline and B.C. fir above, with keel, stem and sternpost of white oak, and is to be used by the Naval Service Department for inspection of the oyster fisheries, with headquarters at

in. Steam steering engine and steam windlass are fitted and electric light is fitted throughout. One mast, with derrick to lift 3,000 lb. is fitted. Good accommodation for staff, captain, officers and crew are provided. The deckhouse on main and upper decks are of steel. She was launched in August and will be completed and tried before the winter.

The **Argenteuil** has the following gen-

C.G.S. Berthier

moulded 13 ft.; deadweight 750 tons; speed 11½ miles.

The barge is of steel throughout, with 5 watertight bulkheads. There is a double bottom under engines and a large forepeak tank for trimming purposes.

The barge will be used for coaling the St. Lawrence Ship Channel dredges which work below Quebec. She is fitted with a Brownhoist steam crane and clam of 54 cu. ft. capacity, the crane being also arranged with blocks to lift up to 6 tons,

Charlottetown, P.E.I. The machinery consists of a set of compound surface condensing engines, having cylinders 10 and 20x12 in., supplied with steam from a Scotch boiler 8½ ft. diam. by 8¼ ft. long, with a working pressure of 120 lb. per sq. in. There is also a steam steering gear, and a 2 barrel steam winch of 1 ton capacity, for handling the oyster trawls tins, is placed below deck but is controlled from the wheelhouse. This vessel is already in service.

eral dimensions:—Length between perpendiculars 94 ft.; length over all 101 ft. 5 in.; breadth moulded 21 ft.; depth moulded 8 ft.; deadweight 40 tons; speed (estimated) 9 miles. She is built of steel throughout with bottom and bilge plating protected by B.C. fir sheathing, as she will work in shallow and rocky waters. There are three watertight bulkheads and a forepeak tank for trimming purposes. She is for the use of the Marine Department for buoy service on Lake St.

C.G.S. Ostrea

so that the barge can be used in the buoy service in the spring and autumn.

The barge has been built fully up to Lloyd's highest class to enable her to go to sea, if necessary, and is fitted with compound surface condensing engines having cylinders 20 and 42x24 in. stroke, supplied with steam from a Scotch boiler 15 ft. diam. by 11 ft. long, working pressure 130 lb. Steam steering gear and steam windlass are fitted. This barge was completed and put in service in the early summer.

The **Ostrea** has the following general dimensions:—Length between perpen-

The **Berthier** has the following general dimensions:—Length between perpendiculars 120 ft.; length over all 128 ft.; breadth moulded 24 ft.; depth moulded 12½ ft.; coal capacity 45 tons; speed (estimated) 12 miles. She is of steel throughout, with 5 watertight bulkheads, and is for the staff engineers of the St. Lawrence Ship Channel below Quebec. She is propelled by twin screws, having 2 sets of compound surface condensing engines, having cylinders 14 and 28x18 in. stroke, supplied with steam from a Scotch boiler 15 ft. diam. by 11 ft. long, at a working pressure of 130 lb. per sq.

C.G.S. Argenteuil

Louis, Ottawa River, etc., and replaces the **Maisonneuve** and derrick scow. The machinery consists of single screw jet condensing engines having cylinders 10 and 20 x 16 in. stroke, supplied with steam from a Scotch boiler 9½ in. diam. x 10 ft. long, at a working pressure of 130 lb. per sq. in. Steam steering gear, steam windlass and electric light are fitted, also a steam winch with mast and derrick capable of handling buoys up to 4 tons weight. There is good accommodation for staff, captain, officers and crew. She was launched in October and will be ready for service in the spring.

Toronto, Hamilton and Buffalo Navigation Co's Car Ferry Maitland No. 1.

As announced in our last issue, the Toronto, Hamilton & Buffalo Navigation Co., a subsidiary of the Toronto, Hamilton & Buffalo Ry., has commenced a car ferry service between Port Maitland, Ont., and Ashtabula, Ohio, thus forming a connection between the T.H. & B.R., C.P.R. and other Canadian lines, and the New York Central and other lines in the U.S.

The dimensions of the car ferry Maitland No. 1, are: Length over all 350 ft.; length on keel 338 ft.; breadth moulded 56 ft.; depth at side to main deck 20½ ft.; height between main deck and shelter deck 17 ft. 7 in.; gross tonnage, 2,757.

She is of steel throughout, of the shelter deck type, with 4 tracks on the main deck for cars. The shelter deck has steel deck houses for the accommodation of the officers and crew. The pilot houses are located fore and aft, and the bridge on the top of the forward deck house and

complete with valves and pipes; 1 double funnel for each pair of boilers, and 2 ash guns in boiler room.

The propelling machinery consists of 2 vertical triple expansion engines with cylinders 19½, 31 and 52 in. diam. x 36 in. stroke, arranged with the h.p. cylinder in the centre, supplied with steam by 4 single ended Scotch boilers, each 13 ft. 2 in. x 11½ ft., at 175 lb. working pressure.

There is accommodation on the vessel for 30 cars arranged on 4 tracks on the main deck, and the working speed is 12 statute miles an hour. Capacity, 2,000 net tons dead weight on a mean draught of 14 ft. The run between Port Maitland and Ashtabula is 91 miles, and ordinarily three round trips are made in 48 hours. The car ferry was built by the Great Lakes Engineering Works, Detroit, Mich.

Toronto, Hamilton and Buffalo Navigation Co's Car Ferry Maitland No. 1.

also on the top of the forward pilot house. The hull is divided into compartments by 7 watertight transverse bulkheads, one in way of each coal bunker. Four single ended Scotch boilers are placed amidships with one thwartship fire hold and a wing coal bunker on each side in way of boiler room. The triple expansion engines are in a compartment next abaft the boiler room.

The following items are included in the general equipment of the vessel:—1 steam fire pump in engine room connected to a 2 in. pipe extending the whole length of the vessel on each side; 1 steam sanitary pump in engine room; 1 two-cylinder hand deck pump in engine room; a complete electric light installation, consisting of two 15 kw. direct connected generating sets; complete wireless telegraph installation; a refrigerator in the after deck house, fitted with drinking water coil set; 2 sets of engine room telegraphs for each engine; steering telegraph from top of pilot house to after end of shelter deck; 2 sectional propellers 12 ft. diam.; 1 air pump 30 x 18 in., simplex type; 1 cold water pump, independent duplex, 6 x 4 x 6 in., standard marine type; 1 bilge pump, independent duplex, 7 and 10 x 10 in.; 2 boiler feed pumps, independent simplex, 12 and 7 x 12 in.; 1 fire pump, outside centre packed positive valve type, 12 and 8 x 12 in.; 4 purifiers

Stranding of the s.s. Indutiomare.

An investigation into the causes of the stranding of the Belgian s.s. Indutiomare on White Horse rock, Magdalen Islands, Aug. 19, was held at Halifax, N.S., Oct. 13, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Morrison and Lieut.-Commander C. Adam, R.N.R., as nautical assessors. The court found that through over confidence in the action of his compass, the master, Henry Matthews, decided to proceed under hazy weather at full speed, which was not considered immoderate in this instance, and after running a certain distance and seeing land on his starboard bow, which he expected to find on his port bow, instead of stopping his vessel or retracing the distance he had come, in order to take the course originally intended, he proceeded after taking some cross bearings which proved either to be hastily or negligently done, as they did not coincide. It was of opinion that the errors of the compass were incorrectly deducted from the observations, and found that his deviation is marked west when it should have been east, which may account for the application being wrongly made. The court expressed the opinion that in attempting to pass a couple of miles from Deadman's Island and steering a course for North Cape,

P.E.I., and making Deadman's Island as a point of departure afterwards to steer for Cape North, Cape Breton, the master was making rather close sailing for a stranger in these waters, and a peculiar method of choosing a point of departure in selecting such a place as Deadman's Island. If he had studied the sailing directions he would have found an irregularity of tides and lack of anchoring grounds, and he should have avoided that part of the land to a greater extent than he did. It therefore found that he did not exercise the judgment which is looked for in a master. As the court has no jurisdiction over a foreign certificate, a copy of the court's finding, with the evidence, has been transmitted to the Belgian Government so that it may deal with the matter as it thinks fit.

Reported Rearrangement of North Atlantic Shipping Companies.

A Glasgow, Scotland, press dispatch states that important negotiations are taking place with a view to a large development in the shipping service between Great Britain and Canada. It is stated that there will be a regrouping of the companies, affecting the Canadian Pacific, Allan, Canadian Northern and Cunard Lines. The information contained in the dispatch is somewhat belated, as some of the movements in the so-called regrouping have already been made. The C.P.R. has had control of the Allan Line for a considerable period, and the two lines are being managed by Canadian Pacific Ocean Services, Ltd., until the trend of international events makes it advisable, in the directors' opinion, to make other arrangements. The White Star and Dominion Lines, which, according to the dispatch, are to form a group in the rumored rearrangements, have been operating to Canada as one concern for several years as the White Star-Dominion Line. The third group mentioned includes the Cunard, Anchor, Canadian Northern and Donaldson Lines. So far as these are concerned, the Cunard Line has absorbed Canadian Northern Steamships, Ltd., and has obtained, at least, controlling interests in the Anchor and Donaldson Lines. Therefore the promised sensational developments may as well be put down to a news agency's intelligent anticipation of past events.

Vancouver Dry Dock.—The Amalgamated Engineering and Dry Dock Co., which was organized before the war, but which was prevented by the financial situation from proceeding with its plans, is reported to have announced that within a few weeks it will commence the construction of its proposed dry dock and ship-building plant. It is stated that financing has been arranged in the East, and that work will be proceeded with on the site near the Wallace Shipyards, North Vancouver, B.C., almost immediately. In 1914 the company applied to the Dominion Government for aid under the act granting aid to dry dock building and an order in council was passed indicating the Governments willingness, provided the undertaking was financed, to subsidize a dock of the following dimensions:—Length from caisson stop to head wall, 1,150 ft.; width of entrance, 110 ft.; depth over sill at extreme high water spring tides, 41 ft.; depth over sill at low water spring tides, 24.25 ft. The estimated cost of the dock is \$5,458,418.37, and the subsidy mentioned in the order in council is 4% per annum for 35 years.

Customs Drawback for Shipbuilding in Canada.

For some years past it has been evident that the Canadian shipbuilders of the Dominion have been placed at a disadvantage in competing with shipbuilders in other parts of the world, and efforts have been made from time to time to induce various governments to encourage the building of vessels within the Dominion, by the payment of a subsidy on a tonnage basis, or in some other manner, but without success. Canadian purchasers generally preferred to place their orders for new vessels in Great Britain, where the cost of production was considerably lower, and better financing arrangements could be made. Apart from the higher cost of labor in local yards, the builder was further hampered by the heavy duty he was compelled to pay on the materials which he imported, and it was mainly to this item that he looked for relief. Numerous deputations have been received by the present Government and its predecessor, and recently it was intimated that the Government intended taking steps to enquire into the situation. This was rendered imperative by the conditions created by the war. It is a practical impossibility to obtain deliveries of vessels from British shipyards, as when they are not already engaged on Admiralty work, they are heavily booked with other orders. The wastage of vessels in war service, in which a number of Canadian vessels are engaged, has made it necessary that a considerable number of new ones be built without delay, and this applies to other countries, which, although neutral, have suffered heavy losses through the illegal sinking of their vessels by the enemy. Of late, Norway has been, perhaps, the heaviest loser in this respect, and British shipbuilders being practically closed so far as new orders are concerned, orders have to be placed elsewhere, and numerous offers have been made to Canadian builders, and some orders placed. There is a restriction on the exportation of Canadian, or Canadian built vessels to foreign countries, but under the circumstances existing the necessary permission has been granted.

An order in council has been passed providing for the granting of a drawback of customs duty on articles used in the construction of vessels built in Canada, dating from Nov. 1, as follows: A drawback not exceeding 99% of the customs duty paid, may be granted and paid by the Minister of Customs on materials used in the original construction of ships and vessels measuring over 500 tons gross tonnage, built in Canada, when such ships or vessels are authorized by order in council to be exported for registry outside of Canada, or are British registered in Canada and are constructed so as to obtain a class in Lloyd's, Bureau Veritas, British Corporation, or other recognized classification satisfactory to the Minister of Customs; provided that the drawback payable under this section shall be in lieu of any drawback based on a specific rate per registered ton. The claimant for drawback must be the builder of the ship or vessel. Drawback shall be paid only on ships or vessels which have within themselves the power of independent navigation, either by means of sails, steam or other motive power. The payment of the drawback shall be subject to the following conditions: The quantity of materials used and the amount of duty paid thereon shall be ascertained; the claimant for drawback shall be required to make a declaration to the effect that he

is the builder and the claimant for drawback, that the vessel was built in Canada and is an entirely new vessel, and giving details of classification; there shall be furnished by the claimant a certificate from the Registrar of Shipping, certifying the main details of construction; the claim for drawback shall be verified under oath before a collector of customs or justice of the peace, to the satisfaction of the Minister of Customs, in such form as he shall prescribe, and the Minister may also require in any case the production of such further evidence, in addition to the usual averments, as he deems necessary to establish the bona fides of the claim; all applications for payment of drawback shall be placed before the Customs Department, with evidence as above mentioned complete, within six months from the date of registration or launching of the ship or vessel upon which the claim is made, otherwise the same shall be rejected. It has also been arranged that vessels which are being built under this order in council, may, upon application of the builders, be built under the supervision of a customs officer, who will carry the responsibility connected with the imported material used in the construction, and under these circumstances it will not be necessary to pay the duty over, as was formerly done.

A study of the terms of the order in council, taken in conjunction with drawbacks previously allowed on material imported for re-export, and of the drawback based on the specific rate of \$1.12 per registered ton, brings out the fact that the benefit under the new order is not so apparent as at first sight. There has always been allowed a drawback of 99% on all materials imported and re-exported, and this applied to vessels of any tonnage, while in the new order the drawback is confined to vessels of over 500 tons gross. Again the drawback is only payable on ships or vessels which have within themselves the power of independent navigation. This eliminates dredges from the vessels on which drawback is payable. Therefore the only actual benefit to be derived from the new order is that drawback will be paid on vessels of over 500 gross tons, having within themselves the power of independent navigation and built for British registration in Canada, and that vessels may be built for registry outside Canada. No drawback will be payable on vessels of less than 500 gross tons, nor on vessels without the independent power of navigation, such as dredges, and the drawback on vessels built for British registry in Canada, based on the specific rate of \$1.12 a registered ton, is eliminated.

The Western Dry Dock and Shipbuilding Co.'s plant at Port Arthur, Ont., which has, since its inception, been practically under U.S. control, has passed into the hands of James Whalen, Port Arthur, who has been President since its organization, and John Burnham, Chicago, Ill., and will in future be under the former's direct management. It is announced that plans for additional berths for increasing the company's output are under consideration, and it is hoped that shortly it will be possible to undertake the construction of four vessels at a time. Mr. Whalen is reported to have stated that it is intended to maintain a permanent organization, and should contracts at any time not be sufficient, it is the intention to build on company's account.

A Welcome Test.

The Interstate Commerce Commission has included the C.P.R. and the Grand Trunk Pacific Coast Steamship Co. in the probe instituted by Delegate James Wickersham, of Alaska, for political effect. The probe covers Alaska rates by water and rail and in itself is hardly worth detailing as the contention is so well known. The U.S. lines, parties to the suit, are amenable to the Interstate Commerce Commission, but the great test, and one that is most warmly welcomed, is the effort of the Commission to include the Canadian steamships in the process of strangulation which the Commission is supposed to conduct under its unlimited powers. From a purely legal and diplomatic viewpoint, the two Canadian steamship companies can, and they certainly should, ignore the Commission's summons. Every law governing maritime commerce is distinctly at variance with an attempt by a U.S. railway regulating body, created and operated upon political lines, to interfere with a foreign steamship. Without any assumption or suggestion that the Canadian lines are guilty or not guilty of error or irregularity, the question resolves itself into one whereby a foreign steamship company, operating between Canadian and U.S. ports, is or is not subject to the heckling laws of a Commission created for the purpose of regulating interior railroad rates within one nation. That the Interstate Commerce Commission has no authority to regulate U.S. steamships in the coastwise trade will undoubtedly be finally passed upon. The point at issue is that the Commission has made the Canadian steamship lines parties to this probe and these Canadian steamship lines have it in their power not only to refuse to obey the summons but can laugh at the Commission and thus administer a well deserved rebuff to this meddlesome body. All they have to do is to file their reply with the British Ambassador at Washington, D.C. Every transportation man is delighted at the turn of affairs, for it is a well known fact that the Canadian lines control a large portion of the South-eastern Alaska business owing to the superior class of vessels operated, and it is a foregone conclusion that they are going to continue such operations without fear of interference from the notoriously inefficient and politically governed Interstate Commerce Commission.—Railway and Marine News, Seattle, Wash.

Nationality of Radiotelegraph Operators.—The following has been added to the Dominion Radiotelegraph Regulations:—88. (a) No person shall be permitted to attend examination for any class of certificate of proficiency in radiotelegraph (1) who is not a British subject; (2) who has at any time been of enemy nationality; (3) whose parents were not of British nationality at the time of his birth; (4) whose parents have at any time been of enemy nationality; (b) Candidates for examination for first class certificates of proficiency must be not less than 18 years of age; (c) This regulation shall take effect Oct. 15, 1916, and shall remain in force until the cessation of hostilities, unless sooner repealed.

Vancouver Dry Docks, Ltd., has been incorporated under the British Columbia Companies Act, with \$100,000 authorized capital, and office at Vancouver, to own and operate docks, wharves, warehouses, elevators, steam and other vessels, dry docks, etc.

British Columbia Legislation to Encourage Shipbuilding.

In addition to the aid to shipbuilding by customs drawback, provided by the Dominion Government, the British Columbia Government has, by the British Columbia Shipping Act, described as an act respecting shipping and to make provision for aid to the shipbuilding industry in British Columbia, granted aid in regard to ships and vessels built within the province for service within and to and from ports in the province and outside ports. This bill constitutes a Shipping Credit Commission, consisting of a superintendent and two other directors, with the power of an incorporated company, which may own and operate vessels of all kinds, as well as build and deal in them generally. The superintendent and one director are nominated by the Lieutenant Governor in Council, and the third director is the Deputy Minister of Finance. The Commission is empowered to make loans subject to the provisions of the act and to deal with the necessary collateral securities, and must keep a register of loans. The loans made shall be on vessels built and registered in the province, and made on the written application of the borrower in prescribed form setting forth clearly the purpose for which the loan is required. No loan shall be granted for an amount exceeding 55% of the ascertained value of the vessel, or of the shares offered as security, and the loan may be made in instalments. A commissioner may not deal with any application for a loan by any person with whom he is within the third degree of consanguinity, or who is a partner, or a debtor under a mortgage to any association of which the commissioner may be a director or member.

The following provisions shall be carried out in respect to vessels built under the aforementioned loans:— the plan and specification of the ship shall be approved by the commission, and the ship shall be so built as to obtain a class in Lloyd's or Bureau Veritas, white labor only shall be employed in the construction, and in the subsequent operation and maintenance; such rates of wages as the commission may decide to be a fair wage rate shall be paid; the Superintendent of the commission or such other person as may be approved by the commission shall be the managing owner of the ship until the loan is fully repaid; the ship shall not be sold or transferred except with the commission's consent for five years from the date of the loan and its cargo carrying capacity shall be utilized to the full extent on each voyage outward, and shall be operated continuously to the commission's satisfaction; every charter shall be subject to the commission's approval during the currency of the loan, and the rates of freight on British Columbia shipments shall never exceed the actual rates paid on similar shipments at even dates in the States of Washington and California, and the commission shall have power to ascertain and certify such rates; all insurance and risks during construction shall be made loss payable to the commission as its interest may appear and exist, and such insurance shall be carried in any amount which the commission may deem necessary; the contract with the commission shall contain a provision whereby 1% of the gross earnings of the ship during the currency of the loan shall be paid to a reserve fund of the commission as a payment from the shipping industry ben-

efitted by this act towards governmental risk, cost and expense of passing this act and carrying it into effect. Each loan made by the commission is to bear 6% interest, payable half yearly, and the principal is repayable in five equal annual instalments; provided that should 50% of the net earnings of the ship for any year exceed the annual instalment of principal and interest, then the borrower shall repay a further sum so that the amount paid each year in reduction of the loan shall never be less than 50% of the net earnings of the ship, and never less than 20% of the original amount of the loan, without reference to earnings. In case of default by the borrower, or if the commission considers that the loan or any portion of it shall have been used for any other purpose than that for which it was made, the commission may refuse to pay any unpaid portion of the loan, and one month after demand by registered letter for the repayment of the loan made, may take possession of the whole or any part of the security, and dispose of same by public or private sale, applying the proceeds in payment in the first instance of money advanced under the loan agreement. Any loss which may arise from such sale to be debited to the reserve fund before mentioned.

In aid of the shipbuilding industry, the Government will pay to the owner of each ship, up to a number not exceeding 20, built and launched in the province after the passing of the act, a subsidy in 10 annual instalments, each so computed as to bring the net earnings of the ship up to 15% of the actual cost as certified by the commission in respect of the year whereof payment is made, but so that the subsidy paid in any one year shall never exceed an amount equal to \$5 a ton dead-weight capacity, with provision for a safe freeboard. The first of such instalments shall be paid in respect of the first year after the declaration of peace in the present war, and annually thereafter until the full subsidy is paid. The bona fide user of the ship in the British Columbia trade for outward borne cargoes shall return to some B.C. port for reloading, with liberty to carry return cargo to any port along the generally practicable line of such return. The subsidy shall only be payable to the owner who actually paid for the construction of the ship, or to his assigns who actually operate the ship, and not to any middleman or promoter; it shall not be liable or subject to assignment, attachment, garnishment or any process of execution; and in the event of there being conflicting claims to payment of the subsidy, the decision of the commission shall be absolutely final and binding without appeal.

The act also provides that the commission may, with the sanction of the Lieutenant Governor in Council, enter into contracts for the establishment of shipbuilding, repairing and docking plants in the province on the condition that in respect of such plants securities may be issued not exceeding 55% of the actual cost as certified by the commission, and the due payment of such securities both as to principal and interest not exceeding 6% per annum shall in the first instance be undertaken by the person or company establishing the plant, and shall be unconditionally guaranteed by the Provincial Government, the securities guaranteed constituting a first charge on the

plant and lands.

Advantage has already been taken of this act, chiefly by the Canada West Coast Navigation Co., which has placed orders for the construction of 8 auxiliary powered schooner type vessels for the lumber trade. Six of these vessels are under construction at North Vancouver and 2 at Victoria. Details of these have already been given in Canadian Railway and Marine World.

Dominion Government Dredge for the St. Lawrence Ship Channel.

A large dredge for service in the St. Lawrence ship channel below Quebec was launched at Maisonneuve, Montreal, Nov. 19, and was christened Dredge No. 16 by Mrs. Hazen, wife of the Minister of Marine and Fisheries. The vessel is the largest of its kind in Canada, and will be capable of dredging and discharging into steam hopper barges on either side, or into its own hopper, 1,500 tons of material an hour when working at a depth of 57 ft. The principal dimensions are as follows:

Length between perpendiculars	284 ft.
Length over all	292 ft.
Depth moulded	20½ ft.
Mean draught with hoppers full	16½ ft.
Dredging depth	57 ft.
Angle of bucket ladder	45 degrees
Angle of discharge chutes	25 degrees
Capacity of hoppers	30,000 cub. ft.
Dredging capacity per hour	1,500 tons

The completion of the dredge was delayed somewhat on account of war requirements, but everything will be in readiness for its operation in the ship channel in the coming spring. It was built by Canadian Vickers, Ltd. A full description of the dredge and its equipment was given in Canadian Railway and Marine World for September.

Lock Gate Accidents on the Welland Canal.

The s.s. J. H. Shrigley, with a cargo of coal from Erie, Pa., for Toronto, carried away both foot gates of lock 7 on the Welland Canal, Nov. 5, and caused considerable damage to the surrounding country. It is stated that the vessel entered the lock at excessive speed, and that there was a confusion of signals between the bridge and the engine room. The head gates were saved by the lock tenders, who made them fast with cables. The damage was estimated at \$7,000, and the vessel was detained at Port Dalhousie pending an arrangement for settlement. The break was repaired and navigation resumed Nov. 6.

A second accident occurred Nov. 21, when the s.s. Lehigh, upbound, light, was entering lock 1 at Port Dalhousie. It is stated that her engine centred before the speed could be checked, and she rammed the head gates, both of which were carried away. The damage, which is estimated at \$4,000, was repaired by 10 a.m. Nov. 22 and locking was resumed.

Kendall Bros., Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital and office at Montreal, to own and operate facilities of every kind, for the transportation of merchandise, etc., by land, air or water.

The Norwegian s.s. Thorjerd, built by the Western Dry Dock & Shipbuilding Co., Port Arthur, passed through the canals, Nov. 21, on her way to the seaboard via the St. Lawrence. She is to be operated between New York and the West Indies.

The Minister of Marine on Canadian Shipbuilding.

Hon. J. D. Hazen, Minister of Marine, in speaking at Montreal, Nov. 19, after the launching of Dominion Government Dredge No. 16, said that some of the guests present would remember the time when the securing of a 14 ft. channel between Montreal and the sea was regarded as an impossible task, but that had been secured. The Marine Department was working on the task of making a 35 ft. channel from Montreal to the sea, and was not only accomplishing that task, with great success, but was widening and straightening the channel as well. He referred with gratification to the manner in which navigation was being maintained between Quebec and Montreal with hardly an accident, the vessel plying the channel as safely as in any part of the world, due partly to the excellent pilots and partly to the fact that the Dominion Parliament had never begrudged money to make it the most perfectly buoyed and lighted waterway in the world. The new dredge was ordered and built to remove the only obstacle below Quebec to having as safe a waterway to the Atlantic as was possible, and he would be both surprised and disappointed if it did not bring about a reduction in the insurance rates now charged on vessels employed on this route, and their cargoes.

He referred to the ice-breaker built for the Dominion Government recently, but sold to the Russian Government to keep the port of Archangel open as long as possible. The Earl Grey and the Minto had also been sent by the Canadian Government as a contribution towards helping Russia in the war. He told of the dire prophecies of ruin indulged in when the Canadian Vickers plant was first established, and gave a short resume of the great aid given not only to Canadian shipping, but to the British Government by the company.

He gave some important statements regarding the establishment during the war of shipbuilding in Canada on a permanent and profitable basis. In addition to the plants, splendidly equipped for the construction of steel ships, in New Glasgow, Montreal, Kingston, Toronto,

Collingwood, Port Arthur and Vancouver, there are several points, but more particularly in Nova Scotia, a considerable number of yards where the building of wooden vessels was being successfully and extensively carried on. In the Maritime Provinces this is a revival of an ancient industry, but it has also been undertaken in a practical manner at Vancouver, where many auxiliary schooners of a large size are being built for the timber trade between that province and Australia and the Orient. The Wallace Shipyards and J. Coughlan & Son, of Vancouver, have also recently concluded contracts for building several large steel freighters. A number of contracts for Norwegian interests have also been undertaken by Canadian companies, with the assistance of the Government, to supply the wastage by submarines and mines.

He reminded his hearers how the Canadian Government had been obliged, on account of the war, to prohibit the export of Canadian ships without the Government's consent. In order to provide for a large employment now and pave the way for permanent shipbuilding after the war, permission had been granted for the export of ships to be constructed as follows: J. Coughlan & Sons, Vancouver, 3 large steel freighters, with carrying capacity of more than 8,000 tons, at \$1,200,000 each; the Wallace Shipyards, of Vancouver, 4 large steel freighters; the Western Dry Dock Co., of Port Arthur, 3 full canal size steel freighters; Thor Iron Works, Toronto, 2 full canal size steel freighters; Polson Iron Works, Toronto, 2 steel freighters, 3,000 tons capacity, and 2 more of 4,250 tons; Canadian Vickers, Ltd., of Montreal, 2 steel freighters of 7,000 tons, and the Nova Scotia Steel Co., of New Glasgow, N.S., 3 freighters. One of the conditions on which permits were given to construct these vessels was that during the war they should not engage in any enemy trade, and another was that no demand should be made on Great Britain for materials, machinery or labor to build them.

"The immediate effect of the construction of these ships," said the Minister,

"will be the distribution of a large amount of money among the people, but the better and more enduring effect will come to us after the war is concluded, in the shape of a great industry established on a firm and permanent basis. If in this connection I have any note in the way of regret to sound, it is that our own people do not appear to engage in the profitable enterprise of building, owning and operating ships to as great an extent as in my judgment they should do."

He pointed out the immense amount of ocean shipping which will be needed after the war, when all the nations will engage in the race for world trade. The nation with the largest amount of available shipping will have a distinct advantage. That explains the anxiety of the Norwegians to get as many ships as possible, and it explains as well why there were built in United States yards in the first 10 months of the year vessels aggregating a tonnage of 405,894 tons. However, Great Britain had at the end of September 469 steel merchant ships, of a tonnage aggregating 1,789,054 tons, under construction and well advanced towards completion. Germany has done next to nothing since the commencement of the war, and Great Britain's supremacy is therefore, in no way menaced. That does not absolve Canadians, however, from doing their best to add to the mercantile marine of Canada to the fullest extent.

Mainly About Marine People.

Capt. Charles Babb, a well-known lake navigator, died at Goderich, Ont., Nov. 7.

Charles Smith, K.C., has been appointed Secretary, Quebec Harbor Commission.

W. G. Ross, Chairman, Montreal Harbor Commissioners, spent a short holiday at Pinehurst, North Carolina, during November.

Hiram Calvin, of the Calvin Co., Ltd., forwarders, etc., Kingston, Ont., and Mrs. and Miss Hilda Calvin, expect to leave for England shortly.

J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Ltd., Montreal, has been elected a director of the Sterling Bank of Canada.

Capt. H. N. McMaster, heretofore Assistant to Marine Superintendent, Montreal Transportation Co., Kingston, Ont., has been appointed Marine Superintendent there, vice Capt. R. Fraser, retired.

Capt. Robert Fraser, Marine Superintendent, Montreal Transportation Co., Kingston, Ont., has resigned on account of ill health, and has gone to Long Beach, Cal., where he intends residing in the future.

R. L. Latham, Chief Engineer, Toronto, Hamilton & Buffalo Ry., has also been appointed Vice President, Toronto, Hamilton & Buffalo Navigation Co., in charge of maintenance. Office at Hamilton, Ont.

J. W. Norcross, Vice President and Managing Director, F. S. Isard, Comptroller, and C. A. Barnard, Director, Canada Steamship Lines, Ltd., returned to Canada about the middle of November, after a business trip to Europe.

Lt. Col. George Carruthers, son of James Carruthers, President, Canada Steamship Lines, Ltd., returned to Montreal recently from the front, where he was on service with the 5th Artillery Brigade. He is now raising a divisional ammunition column, with headquarters at Montreal.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during October, 1916.

Canadian Shipping Statistics.

The Deputy Minister of Marine, in his annual report for the financial year ended Mar. 31, states that the total number of vessels on the Canadian register at that date was 8,631, measuring 1,215,021 gross tons. In former years it was the custom to value the shipping at \$30 a net ton, and this figure, although an arbitrary one, having regard to averages, fairly represented approximate real values. At present values are abnormal and actual sales are common at prices ranging from \$75 a ton deadweight capacity, to \$100. The large number of British vessels withdrawn from commercial trade since the war commenced accounts almost altogether for the abnormal increase in freight rates and the consequent value of ships.

Throughout the year there has been much discussion in the press and by various public bodies as to the expediency of taking such steps as would ensure the early development of a purely Canadian mercantile marine, not only for the inland and coasting trade, but for foreign trade as well. In the development of any scheme that may be adopted for this purpose, it is to be hoped that, so far at least as foreign trade is concerned, it will be taken for granted that the day of the small carrier has gone by. It will be generally admitted that, conditions being normal, the construction of vessels for the foreign trade, of a gross tonnage of less than 3,000, should be discouraged, and it will be conceded that the most economical and therefore the most efficient vessel is one with a carrying capacity ranging from 7,000 to 10,000 tons.

The total tonnage transferred from the Canadian register during the period under review was 25,834, covering 42 vessels, divided as follows:

	Number.	Gross Tons.
United Kingdom	2	8,069
Newfoundland	12	4,338
Barbadoes	9	2,845
New Zealand	1	1,496
Shanghai	1	4,216
United States	14	4,780
Russia	1	

The number and tonnage of vessels according to provinces on the Canadian register for the year ended Dec. 31, 1915, was as follows:—

	Sailing vessels			Steamships		
	Number	Gross tons	Net tons	Number	Gross tons	Net tons
Ontario	609	114,209	107,090	1,502	331,087	205,881
Quebec	1,902	159,646	146,524	588	196,659	121,373
British Columbia	424	66,850	64,814	1,219	131,388	80,021
Nova Scotia	1,634	110,595	101,515	453	43,066	24,452
New Brunswick	811	36,021	34,896	257	33,283	21,323
Prince Edward Island	130	8,471	8,023	28	7,571	3,495
Manitoba	13	2,696	2,696	71	7,316	4,784
Yukon	1	556	556	10	2,715	1,739
Saskatchewan	1	145	145	4	660	385
Totals	4,625	491,428	465,859	4,132	753,745	463,453

Ports of registry are distributed as follows:—Ontario 38, Nova Scotia 21, New Brunswick 7, Quebec 6, British Columbia 4, Prince Edward Island, Manitoba, Saskatchewan and Yukon, 1 each.

New vessels built during the year, according to provinces:—

	Number.	Net Tons.
Quebec	49	7,790
Ontario	38	4,709
Nova Scotia	51	2,982
British Columbia	79	2,057
New Brunswick	22	1,114
Manitoba	5	156
Prince Edward Island	2	24
Totals	246	18,832

Of the 341 vessels removed from the register during the year, 14 were sold to foreigners (U.S.), 14 were wrecked, 21

stranded, 14 were lost, 215 broken up, reported out of existence, condemned, dismantled and abandoned, 1 abandoned at sea, 2 lost in collision, 7 foundered, 24 were burnt, 9 were transferred to Newfoundland, 6 to Barbadoes, 3 to Great Britain, 1 to New Zealand, and 1 to Turk's Island, 1 is posted as missing, 2 reported as registry no longer required, and 6 were sunk by Germans.

Stranding of the s.s. Kalibia.

An enquiry into the cause of the stranding of the Clyde Shipping Co.'s s.s. Kalibia, of Glasgow, Scotland, near Fox River, Gaspe County, on the south shore of the Gulf of St. Lawrence, Sept. 24, was held at Montreal, Oct. 5, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and F. Nash as nautical assessors. The court found that the master, John Stewart, was to a great extent misled through the disposition of two churches which were visible to him. Apparently there are three churches between Cape Rosier and the point where the vessel grounded, but the chart, which is an edition of 1890, gives the location of two churches only. This caused him to take cross bearing inaccurately. The vessel was running at full speed, which was maintained during fog, until the grounding, although the master had a doubt as to the accuracy of his bearings. He estimated the vessel to be about eight miles off land, and as his second observation did not coincide with his first, he went to the chart room to verify his position, leaving the vessel proceeding at full speed. The logs and records of observations were examined, and the court found that a method was observed throughout in conducting navigational functions and duties with regard to theory, and it stated with pleasure that it is seldom that observations and records are kept in such a methodical manner. Nevertheless, while credit is given the master for many things, that he has been in command for many years without an accident, serving only two firms, the court could not overlook the fact that the moment an element of doubt penetrated his mind, the only practical and careful way for him to have acted,

was to have stopped his vessel until he ascertained exactly the distance he was off land, and to have taken soundings which would have been a verification and would have freed him from any doubt. For failing to take a cast of the lead and for keeping his vessel full speed ahead, the court severely reprimanded him, but owing to his previous good record, did not deal with his certificate, although it cautioned him to act in a more prudent manner in future.

Regarding the officers, the court was not satisfied with the interest they displayed, and the knowledge of their responsibilities, but in view of the fact that the master seemed to guide the navigation of the vessel and was on the bridge,

they were not criticized, but were advised to become more interested in their duties, and instead of being on the bridge merely to obey orders, to recognize the fact that they can make themselves very useful to the master, if they study for themselves the existing conditions and assure themselves of the position of the vessel, referring to the chart, or taking observations if necessary, especially when banks of fog are seen in the distance, or more so when navigating in strange waters.

It was also pointed out that the vessel was navigated on a chart published in 1890, but as the master stated that he made enquiries from the authorities at Sydney for a chart of the St. Lawrence, and this was the only one obtainable, the court found no fault with him in that respect.

Atlantic and Pacific Ocean Marine.

We are officially advised that the name of the s.s. Hackness, which, as announced in our last issue, the C.P.R. has purchased from Pyman Bros., Wales, has been changed to Miniota.

The C.P.R. s.s. Lake Manitoba arrived in Montreal at the end of October, from Liverpool, for the first time since the outbreak of war, having been engaged in Admiralty work in the interval.

The s.s. Turret Cape, outward bound from Montreal for Manchester and Havre, with a cargo of steel, put in at St. John's, Nfld., Nov. 1, for slight engine repairs. She was detained a few days while they were carried out.

The British s.s. Seaton, which sailed from Montreal about the middle of October, and St. John's, Nfld., Oct. 20, is reported to have been sunk by the enemy. She was owned by the Seaton Steamship Co., West Hartlepool, Eng.

The Australian Government is stated to be operating about 35 cargo steamships, some of which have already been loaded at Montreal for Australian ports. In addition to these, five sailing vessels are being operated under Government control.

The s.s. Rappahannock, owned by Furness, Withy & Co., is reported to have been lost while en route from Halifax, N.S., to London, Eng., with a cargo of fruit and Red Cross supplies.

A number of Canadian survivors of the torpedoed s.s. Cabotia arrived at Quebec, Nov. 13, by the Allan Line s.s. Ionian. The Cabotia left Quebec, Oct. 10, with horses, and was torpedoed by a German submarine off the coast of Ireland, Oct. 20. Thirty out of a crew of 70 were saved.

The last sailings of ocean passenger vessels by the St. Lawrence route were announced to take place as follows: C.P.R. s.s. Metagama, Nov. 27; Allan Line s.s. Grampian, Nov. 25; Cunard Line s.s. Ausonia, Nov. 23; Anchor-Donaldson Line s.s. Athenia, Nov. 21; White Star-Dominion Line s.s. Northland, Nov. 19. Some cargo vessels will sail at later dates, as aids to navigation will not be removed until well into December, unless absolutely necessary.

All vessels are warned that they must not approach His Majesty's ships in Halifax harbor during the hours of darkness, within a distance of 200 yards, unless engaged on official business, when they must answer the challenge of the ship they are passing or proceeding to, otherwise they will lay themselves open to be fired upon. The Dartmouth Ferry Commission ferry boats are considered exempt from this order.

Maritime Provinces and Newfoundland.

A press dispatch states that the Nova Scotia Steel & Coal Co. has decided to build another steel steamship at its works at New Glasgow, N.S., about 25 per cent. larger than the one now under construction.

Mariners are warned that it may be necessary to extinguish certain lights and to discontinue or remove any aids to navigation on the east coast of Canada and on the coasts of Newfoundland without notice.

A Newfoundland press dispatch states that the French Government is negotiating with the Newfoundland Government, through the British Admiralty, for the release of the steamships *Portia* and *Prospero* from their local service, for use by the French Admiralty for war purposes.

Eastern Transport, Ltd., has been incorporated under the Nova Scotia Companies Act, with office at New Glasgow, N.S., to own and operate ferries between New Glasgow, Abercrombie, Pictou, Lyons Brook, Pictou Landing and Pictou Island. F. Fraser, S. M. Reltes and C. Ross, New Glasgow, are the incorporators.

Nova Scotia Shipping Co., Ltd., has been incorporated under the Nova Scotia Companies Act, with \$20,000 capital, and office at Halifax, to acquire the schooner *William Thomas Moore*, of Bridgetown, Barbados, and to own and operate steam and other vessels. W. J. Logan, H. C. DeWolf and B. H. Dunfield, Halifax, are the incorporators.

Publicover Shipping Co., Ltd., has been incorporated under the Nova Scotia Companies Act, with \$10,000 capital, and office at Liverpool, N.S., to acquire the schooner *James L. Publicover*, to own and operate steam and other vessels and to carry on a general fishing business. W. L. Hay, E. S. Marshall and S. M. Tartling, Liverpool, N.S., are the incorporators.

The Marine Department has issued a notice to mariners that *Sambro* lightship 15 has not been removed from her station at the *Sambro* outer bank near the Halifax harbor entrance, as erroneously stated in a previous notice. The sounding of the submarine bell from that lightship has been discontinued until further notice. The buoys which marked the war channel in the approach to Halifax, from *Neverfail* shoal to seaward, have been removed and discontinued.

Mariners are warned that the ports of Halifax, N.S., and St. John's, Nfld., are closed to all vessels from sunset to sunrise, until further notice. The narrows in the approach to St. John's are closed by a boom for the same period and a guard boat is in attendance. The following lights have been extinguished until further notice:—Cape St. Francis, Cape Spear, Bull Head, Ferryland, Bearcove Point, Fort Amherst and St. John's range lights, all in the neighborhood of St. John's harbor.

A New York press dispatch of Nov. 20, stated that the Canada Atlantic and Plant Line Steamship Co., which for many years has maintained a regular service between Halifax, Hawkesbury and Charlottetown, will discontinue its winter service at the end of the year, and may not resume sailings in the spring. It is also stated that officials admit that the steamships *Evangeline* and *Halifax* are for sale, a reserve price of \$600,000 being placed on the for-

mer. The s.s. *Halifax*, which was the only vessel on the route during the current year, will, it is said, undergo extensive repairs, unless sold.

The Department of Public Works received tenders to Dec. 1 for stone filling under the shed proposed to be built at pier 1, berth 16, West St. John, N.B.

The shipping companies operating at St. John, N.B., have increased the wages of the longshoremen to 37½c. an hour, as against the previous 35c., and a demand of the men for 40c. The new scale is effective at once and will continue in force until Dec. 1, 1919. The coal handlers demanded 55c. an hour and 65c. overtime, but have been granted an increase of 15c. an hour over the former rate, making the new rate 50c., and will work 10 hours a day instead of 9 as hitherto.

Province of Quebec Marine.

The Quebec Harbor Commissioners have purchased the s.s. *Juanita* in the United States, and have changed her name to *Courcelette*.

The Montreal, Valleyfield & Soulanges Navigation Co.'s s.s. *Hebron* was considerably damaged by fire at her moorings in the Lachine Canal, Montreal, Nov. 4. She is a small vessel and plied between Montreal and Cornwall.

Ontario and the Great Lakes.

The Farrar Transportation Co.'s s.s. *Collingwood*, which sustained some bottom damage when she grounded at Whitefish Point some time ago was repaired at Collingwood and resumed service Nov. 17.

Canada Steamship Lines' s.s. *Sir Trevor Dawson*, launched at Superior, Wis., recently, commenced her maiden trip, Nov. 20, when she loaded 11,000 tons of ore at the Missabe dock, and sailed for South Chicago.

The Imperial Oil Co.'s steamships *Iocolite*, *Royalite* and *Sarnolite* have been transferred from the Great Lakes to the Atlantic coast trade for the winter.

A pontoon lock gate lifter, built by M. Beatty & Sons, Ltd., Welland, passed from Lake Ontario by way of the Trent Valley Canal to Peterborough, Nov. 2. A description of this vessel was given in Canadian Railway and Marine World for Oct., 1914.

The Quebec & Levis Ferry Co.'s s.s. *John S. Thom*, which went aground near Waddington, above Cornwall, recently, and which was abandoned to the underwriters, is to remain there until the spring, on the recommendation of the local wrecking company.

The wreck of the barge *Rob Roy*, which was sunk some time ago in the Erie harbor approach, Lake Erie, is now no longer a menace to navigation. The upper works have been destroyed by storms, the mast and boom having been removed, and there is a least depth of 30 ft. over the wreck.

A resurvey of Penetanguishene harbor establishes the fact that the 300 ft. channel is in parts less than 20 ft. deep. During the past summer a channel with a least width of 100 ft. was completed with a least depth of 20 ft. In front of the esplanade a basin 500 ft. square with a tapered approach has the same depth.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level for October as follows:—Lake Superior, 603.72; Michigan

and Huron, 580.56; Erie, 571.90, and Ontario, 246.06. Compared with the average October levels for the past ten years. Superior was 1.12 ft. above, Michigan and Huron, 0.13 ft. above, Erie, 0.20 ft. below, and Ontario, 0.32 ft. above.

The Imperial Oil Co.'s s.s. *Imperial*, which was in collision with Canada Steamship Lines s.s. *Midland Prince*, Nov. 5, on Lake Superior, was taken into Sault Ste. Marie, whence she was taken in tow to Collingwood for overhaul and repairs.

The Rideau Canal has been closed for the winter and was emptied of water, Nov. 30. The tonnage passing through the canal this year was not so great as in 1915. Up to Oct. 31, there was a decrease in the vessel tonnage of 13,690 tons, as compared with the same period, 1915.

The s.s. *A. D. Davidson*, one of the steamships sold to the French Government recently by the Great Lakes & St. Lawrence Transportation Co., about which there was some litigation, is reported to have been lost at sea. She was considerably overdue, and one of her lifeboats has been washed ashore on the Cornish coast. She sailed from Montreal, Oct. 4, for Havre, France.

The steam tug *Thomas Freeland*, owned by J. Battle, Thorold, Ont., was destroyed by fire at the dock near lock 21, Welland Canal, Nov. 14. This tug, which was sunk in the Detroit River some time ago, was raised recently and repaired at Sarnia. She was built at Detroit, Mich., in 1888, and was formerly named *Fannie L. Baker*. Her dimensions were,—length 65 ft., breadth 16.5 ft., depth 6 ft.; tonnage, 54 gross, 33 register. She was equipped with engine of 10 n.h.p. driving a screw.

The Public Works Department has dredged the entrance to Port Hope harbor to a depth of 16 ft. below the zero of the gauge, which is 245 ft. above mean sea level. Beginning 200 ft. outside the breakwaters with a width of 175 ft., the dredging extends northward the full width between the breakwater piers to where the harbor widens and thence follows the east breakwater with a least width of 170 ft. to the channel between the east and central piers including the full width of that channel to a point 150 ft. inside the warehouse on the east pier.

The name of the s.s. *Caledonia*, which has been purchased from the Great Lakes Engineering Works, Detroit, Mich., by J. R. Smith, Fort William, has been changed to *Gale Staples*. She was built at Marine City, Mich., in 1888, and is of oak with diagonal strapping on the frames, with wooden boiler house, and was first named *W. B. Morley*. She is equipped with fore and aft compound engines with cylinders 24 and 44 in. diam. x 42 in. stroke, supplied with steam by two Scotch boilers, each 10 x 11 ft., at 130 lbs. under induced draught. The engines were made in 1883, and were removed from the s.s. *Kitty Forbes*. Her dimensions are,—length 227 ft., breadth 42 ft., depth 21 ft.; tonnage, 2,197 gross, 1,509 register.

The Reid Wrecking Co., Sarnia, is reported to have purchased the s.s. *Kongo* from the U.S. owners, and it is stated that she will be transferred to the Canadian register. She was built at West Bay City, Mich., in 1881, and is of oak, of the well deck type, with diagonal strapping on the frames, steel arches, wooden boiler house, and was formerly named *Meriden*. She was overhauled and large repairs undertaken in 1911. The propelling machinery consists of compound engines with cylinders 20 and 36 in. diam. by 30 in.

stroke, 450 i.h.p. at 100 r.p.m. and supplied with steam by a Scotch boiler 11 ft. 2 in. by 11 ft. 3 in., at 125 lbs. Her dimensions are,—length 215 ft., breadth 31 ft., depth 10 ft. 2 in.; tonnage, 672 gross, 482 register.

The steamship Algonquin and the motor ship Fordonia, are reported to have been sold to United States interests. The s.s. Algonquin was originally built for Thos. Marks & Co., Port Arthur, Ont., and then sold to the St. Lawrence & Chicago Steam Navigation Co., and was about three years ago sold to the Port Colborne and St. Lawrence Navigation Co., a subsidiary of the Maple Leaf Milling Co. She was again sold last year to A. B. McKay, who had her overhauled and then sold her to the Wasis Steamship Co., a subsidiary of the Nova Scotia Steel & Coal Co. The motor ship Fordonian was originally built for the Merchants Mutual Line Ltd., and later passed to Canada Steamship Lines Ltd. During the summer season she was operated under charter by the Quebec Steamship Co., a subsidiary of Canada Steamship Lines Ltd.

Manitoba, Saskatchewan and Alberta.

Navigation on the Athabasca River has been closed for the winter on account of ice conditions. One vessel ran about 16 miles up the river from Athabasca, Nov. 7, but had to return. The Athabasca ferry has been laid up for the winter.

Supplementary letters patent have been issued under the Dominion Companies Act, changing the name of the Winnipeg Steamship Co., Ltd., to Woodward & Co., Ltd., and cancelling the powers granted to the original company and substituting others. The new company has power to own and operate grain elevators, but has no power to own and operate steam or other vessels, as was granted in the original charter.

British Columbia and Pacific Coast.

The C.P.R. s.s. Princess Charlotte, which has been operating on the triangular service during the summer, has been withdrawn from service and laid up for the winter at Victoria. This service is being maintained by the s.s. Princess Adelaide and Princess Victoria.

The C.P.R. s.s. Princess Alice arrived at Vancouver, Nov. 6, after completing her last round trip to Alaska for the season. She is to be operated in the Gulf service for the winter. The s.s. Princess Sophia will be the only C.P.R. vessel running to Alaska during the winter on a fortnightly service to Skagway.

The Canadian Northern Ry. is operating its first car ferry barge between Port Mann and Gulf points. A second barge will be placed in service between Port Mann and Patricia Bay as soon as the dock at Patricia Bay is completed. Each of these barges has capacity for 9 cars. It is stated that a third barge is being built with capacity for 12 cars.

The Pacific Steamship Co., formed recently to take over the Pacific Coast Steamship Co. and the Pacific Alaska Navigation Co., has decided to maintain the steamships Governor and President on the service to Victoria and Vancouver, instead of replacing them with the steamships Queen and Umatilla, smaller and slower vessels.

The David Evans Shipping Co., Ltd. has been incorporated under the Dominion Companies Act, with \$25,000 authorized capital, and office at Vancouver, B.C.,

to own, manage and operate steam and other vessels, etc., and to carry on a general transportation and navigation business. T. W. B. London, M. H. Thorburn, W. B. Johnson, J. H. Lawson and R. W. Ginn, Vancouver, are the incorporators.

A company is reported to be in process of organization in Prince Rupert to build fishing vessels, three of which are to be taken in hand almost immediately. One of these will be 54 ft. long, equipped with engine of 50 h.p., one will be 44 ft. long, equipped with engine of 30 h.p., and the third will be a seine vessel. C. E. Bainter, an insurance broker, is stated to be actively interested in the scheme.

Transfer of Canadian Vessels Restricted.

The Dominion Government has issued the following regulations respecting the transfer of Canadian vessels to a foreign register:—The regulations enacted by order in council, Mar. 9, 1915, are extended to apply to mortgages of ships, including transfer of mortgages made after Aug. 10, 1916, as they apply to the transfer of ships, and shall apply to mortgages, including to transfers of mortgages, and transfers of ships to foreign controlled companies, made after Aug. 10, 1916, as it applies to transfers of ships to persons not qualified to own a British ship.

The expression "foreign controlled company" means any corporation where the majority of directors or persons occupying the positions of directors, by whatever name called, are not British subjects; where the majority of the voting power is in the hands of persons who are not British subjects, or who exercise their voting powers directly or indirectly on behalf of persons who are not British subjects; where the control is by any other means whatever in the hands of persons who are not British subjects; or where the executive is a foreign controlled company, or where the majority of the executive are appointed by a foreign controlled company.

A corporation shall not be deemed a British subject for the purposes of this section unless it is established in and subject to the laws of some part of His Majesty's Dominions, or of some British Protectorate, and has its principal place of business therein.

The Minister of Marine may require any person who is the owner or mortgagee of a British ship, or who applies to be registered as such, to furnish him with such particulars as may appear necessary to him for the purpose of ascertaining whether or not that person is, or is a trustee for, or otherwise represents a foreigner, or foreign controlled company, and in case of a corporation may require the secretary, or any other officer performing the duties of secretary, to furnish those particulars, and if any person fails to supply such particulars as it is in his power to give when required, or furnishes particulars which are false in any material particular, he shall be guilty of a misdemeanor.

After the passing of these regulations, where any person who is the owner or mortgagee of a British ship ceases to be a British subject, or becomes a foreign controlled company, that ship, or in case of a mortgagee of a ship, the interest of the mortgage, shall be subject to forfeiture, and the provisions of the Merchant Shipping Act relating to the forfeiture of ships shall apply thereto.

These regulations are declared to be in

force for the duration of the war and for three years thereafter.

Rumors About Government Shipping.

A press report from Montreal states that a well founded rumor in shipping circles has it that the initial step towards a Dominion owned mercantile fleet has been taken by the Government, which, according to the rumor, has granted aid to a recently formed shipbuilding company to build nine big freight carriers at a total cost of \$4,000,000. It is stated that these vessels are to be built for shipping Canadian lumber from the Pacific Coast, that plans and specifications of a U.S. vessel have been adopted, and that the Government has subsidized the Brown Auxiliary Lumber Vessel Co., which has a capital of \$5,000,000, to build nine vessels of this type. So far as can be ascertained, there is no truth in the statements as quoted, or at best it is a garbled version of information already published by Canadian Railway and Marine World. Canada West Coast Navigation Co., Ltd., has been incorporated in British Columbia, by a number of men associated with shipping in the east, and chiefly connected with Canada Steamship Lines, Ltd., together with H. W. Brown, who is General Manager of the company, and who was formerly connected with the Pittsburg Steamship Co. This new company has placed contracts for the construction of eight vessels of the bald headed schooner type, equipped with semi Diesel engines, designed by J. H. Price, St. Helens, Ore., who designed the ship City of Portland, specially mentioned in the rumor above quoted. These vessels are being built as a direct result of the British Columbia Shipping Act, which provides for the granting of aid under certain conditions, and there is no suggestion of any Dominion subsidy, except any allowances or customs drawback, which may come under the recently passed order in council, details of which are given on another page in this issue.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Dominion Wire Rope Co., Ltd., Montreal, has opened an office at 108 Mail Building, Toronto.

F. H. Hopkins & Co., railway and contractors' supplies, Montreal, have opened an office at 108 Mail Building, Toronto.

Dominion Iron & Steel Co.—J. P. McNaughton, General Sales Manager, has removed his headquarters from Sydney, N.S., to 112 St. James St., Montreal.

Foundry Products, Ltd., has been established in Calgary, Alta., to do a jobbing business in railway, general contractors, mine, heating and plumbing supplies, etc.

Dougall Varnish Co., Ltd.—W. R. Notman, Western Representative at Winnipeg, who was a lieutenant in charge of a machine gun section in one of the Winnipeg battalions, C.E.F., was killed in action, Oct. 25.

Canadian Steel Foundries Limited.—F. E. Smith, heretofore General Superintendent, has been appointed Operating Manager.

Canadian Car & Foundry Co. Ltd.—W. W. Butler, heretofore senior Vice President, has been elected Vice President and Managing Director. F. A. Skelton, heretofore Secretary-Treasurer, has been elected a vice president. W. S. Atwood, heretofore Chief Engineer and General Works Manager, has been appointed Operating Manager.

Canadian Westinghouse Co. has issued the following illustrated bulletins: Westinghouse 101-K railway motor, 30 kw., 40 h.p., 600 volt, split frame, for handling heavy loads at slow speed without a heavy draft of current on the power house or substation equipment; Westinghouse 323-V railway motor, 30 kw., 40 h.p., 600 volt, split frame commutating pole motor 25 kw., 33 h.p., 500 volts; and Westinghouse drum type controllers for electric railway service.

International Correspondence Schools, Scranton, Pa., has issued a "Manual of Information for Students" which is given to each student as he enrolls and before he is given any instruction papers. Its principal contents are introductory remarks, instruction papers and supplies, suggestions for correspondence, method of procedure, postal information, suggestions for study, important requirements for successful study, aid to students. It is very completely indexed.

Goldschmidt Thermit Co.—Wm. C. Cuntz, General Manager and a Director of the Goldschmidt Thermit Co., New York and Toronto, died Nov. 2, at Auburndale, Mass., where he was on a visit for the benefit of his health, which was impaired by an operation for appendicitis a year ago. He was born at Hoboken, N.J., in 1871, and was educated at Hoboken Academy and Stevens Institute of Technology, graduating from the latter in 1892, with the degree of mechanical engineer. He became connected with the Pennsylvania Steel Co., first with the bridge and construction department, which he represented as resident engineer in Boston, Mass., and as European resident engineer in London, Eng. He then served as Assistant General Manager of Sales in Philadelphia, and later as District Sales Manager at Steelton, Pa. In 1910 he was appointed by President Taft as a delegate to the International Railway Congress at Berne, Switzerland. In the same year he severed his connection with the Pennsylvania Steel Co. to become a director and General Manager of the Goldschmidt Thermit Co. in New York. Under his management the business of this company increased very greatly, and equal progress has been

made in the technical development of the Thermit process. His wide experience in the steel industry naturally caused him to take a particular interest in the manufacture of carbon-free metals, and it is largely due to his perseverance and initiative that these metals and alloys are coming into such general use. He was a member of the American Society of Civil Engineers and of some 20 other societies and clubs.

Chilled Iron Car Wheels.

At the Association of Manufacturers of Chilled Car Wheels' annual meeting in New York recently, G. W. Lyndon was re-elected President-Treasurer; J. A. Kilpatrick, President Albany Car Wheel Co., Albany, N.Y., was elected one of the vice presidents, and W. S. Atwood, Chief Engineer, Canadian Car and Foundry Co., Montreal, was elected a director. Following are extracts from the President's address:

The work of our Association during the past year has been based upon the recommendations made to the Master Car Builders Wheel Committee during 1914, at which time we not only outlined a plan of procedure for the improvement of the chilled iron car wheel, by which the safety element stood out prominently, but accompanied our recommendation with full data, pointing out the weaknesses of the present Master Car Builders' standards, and gave our reasons for recommended changes, based upon the knowledge acquired from service records and the lifelong experience of the manufacturers and service of the chilled iron wheel. Our recommendations were substantially as follows: (1) An increase in the weights of the 625 and 725 lb. M.C.B. (2) An 850 lb. wheel for cars of 140,000 lb. capacity; (3) A flange for the 850-lb. wheel for use under the 70-ton cars, with as much of an increase as would be acceptable to the American Railway Engineering Association.

Since our organization in 1909, we have steadfastly maintained that the varied service in the 60,000 lb. class of cars made it imperative that the weight of the wheel should either be increased to meet the maximum conditions of service, or that we should have two standards in this class. The variation in service arises from the variations in the light weight of the car in the 60,000 lb. capacity class, and as the standard of operation is to brake the cars 60% of their light weight, it must follow that any class of cars in which there is 100% variation in light weight (which is common in the 60,000 lb. class) cannot with safety carry the

same weight of wheel, and this is what the manufacturers have been required to do. The standard wheel specified for the 60,000 lb. class weighs 625 lb. and the light weights of the cars vary from 20,000 to 53,999 lb. Our Association recommended that the weight of the wheel be increased to 675 lbs, which would provide a standard wheel which would meet the maximum conditions of service as to load and brake, and in asking for an increase in weight of the two standards 625 and 725 M. C. B. wheels, we were not actuated by commercial considerations, but purely from the standpoint of safety. It is estimated that there are 2,500,000 chilled iron wheel renewals annually and if the weights should be increased 50 lb. each the additional metal to be purchased would approximate 62,500 tons, providing all the renewals required an increase, which is by no means the case, because many of the prominent railways in the country, representing over a fourth of all the cars in use, are already introducing advanced standards and are using wheels much heavier than the present M. C. B. standards. The heaviest 725 lb. M. C. B. standard chilled iron wheel for 50-ton cars is lighter than the rolled steel wheel, and there is no good reason why the chilled iron wheel should be so limited in weight, particularly when the increase involves the nominal expenditure of \$10 a ton, which is the difference between the scrap value of the old wheel, which is accepted in part payment for the new. The reduction in accident hazards would more than absorb the increased expense due to the nominal increase in weight.

Ever since the introduction of the 50-ton car, our association has recommended an increase in the metal of the flange at the gauging point. The American Railway Engineering Association has reported that the manufacturers could increase this flange width 3-16 in. without any change in the present flangeways of track. The M. C. B. Wheel Committee has reported in Convention "that there be no changes in the dimensions and contour of flanges of car wheels as adopted in 1909." The flange adopted in 1909 was an improvement over the M. C. B. design and through the recommendation of our association we succeeded in reducing its height from $\frac{1}{2}$ in. to 1 inch, which gave it greater strength. We know that we can make further improvements, and it needs no argument to prove that a stronger flange is required for the 70-ton cars than for the 30-ton cars.

Our association has made a very satisfactory arrangement with the University of Illinois, in which it is agreed: "That the University Experiment Station will undertake an investigation concerning the stresses and behavior of chilled iron car wheels." In submitting a draft of this arrangement to the President of the University of Illinois, Dean Goss made the following statement: "Progress in the art of railroading is continually developing new questions affecting the weight and contour of chilled iron car wheels. The importance of securing proper design and proper methods of manufacture for such wheels may be judged by the fact that there are now in operation in the U. S. approximately 20,000,000 freight car wheels, and the demand for renewals alone involves the manufacture of 2,500,000 chilled iron car wheels per year. With these facts in mind, the As-

Complete Hydraulic Equipment

For Railway and Shipbuilding Plants

Wheel Presses, Keel Plate Bending Presses, Riveters, Shears, Presses, etc. Centrifugal Pumps, Pumping Engines, Gas Plants, Gas Power Plants, Cast Iron Pipe, Hydrants, Valves and Fittings, etc.

R. D. WOOD & CO. Philadelphia, Pa.

sociation of Manufacturers of Chilled Iron Wheels has agreed to co-operate with the Engineering Experiment Station in a study of the questions fundamental to the design of such wheel. The co-operation proposed guarantees to the station the strongest possible assistance in the development of an investigation of great importance to the public weal."

All of the work of our association is constructive and our recommendations are based upon solid grounds, which must receive favorable consideration and while we have not as yet secured all the improvements outlined, we feel sure that we have demonstrated the reasonableness of our claims. The chilled iron wheel remains in the forefront, not only in this country but in Europe, where the old European standards are seriously menaced. No other type of wheel has ever made serious inroads on the chilled iron wheel and never will providing we are all alive to the increased demands of service. For two-thirds of a century the chilled iron car wheel has remained the standard for the nation's commerce.

WIRES and CABLES for STEAM and ELECTRIC RAILWAYS

THE fact that most of the steam and electric railroads in this country are using our products and continue from year to year to send in their repeat orders, is the best indication of what users think of Northern Electric quality.

No manufacturer pays more painstaking attention to the wire and cable requirements of the railroads; and the manufacturing and shipping facilities of our new Montreal plant are unsurpassed.

Here are some of the lines we make:—

Railway Signal Wire, bare and rubber covered.

Rubber-Covered Wire for round houses and repair shops.

Asbestos Insulated Wire for Headlights.

Reinforced Weatherproof Cables and Armored Cables for use in car shops.

Magnet Wire for rewinding motors.

Car Wire for electric light, fan, annunciator, motor and control circuits.

Trolley Wire.

Bare Weatherproof and Paper Insulated Feeder Cables.

Bonding Cables.

Paper-insulated, Lead-covered Telephone Cables and Bare Wires for Train Dispatching.

Paper-insulated and Rubber-insulated Telegraph Cables.

Armored Cables for bridge installations.

CANADIAN PACIFIC RAILWAY CO.

Dividend Notice.

At a meeting of the Board of Directors held today a dividend of two and one-half per cent. on the Common Stock for the quarter ended 30th September last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from Special Income Account, was declared payable on 2nd January next, to Shareholders of record at 3 p.m. on 1st December next.

By order of the Board,
 W. R. BAKER,
 Secretary.

Montreal, 13th November, 1916.

HULL OF LAUNCH FOR SALE.—

Hull of Government launch at Sturgeon Falls, Ont. Address tenders for same, accompanied by \$10.00 accepted bank cheque, to R. C. Desrochers, Secretary, Public Works Department, Ottawa.

THE VICTORIA ROLLING STOCK & REALTY CO., OF ONTARIO, LIMITED.

Notice is hereby given that a dividend of four per cent. on the paid-up capital stock of the Company for the half-year ended Nov. 30th, 1916, has been declared payable Dec. 1st, 1916, to the shareholders on record as of the 30th of Nov., 1916.

By order of the Board.
 G. T. CHISHOLM, Secretary.
 Toronto, Nov. 20th, 1916.

NOTICE.

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signaling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the facts that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.
 All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

GRIFFIN & BRINKERHOFF

Western Dry Dock and Shipbuilding Company, Limited

ANNOUNCEMENT

The plant of the Western Dry Dock and Shipbuilding Co., Limited, Port Arthur, Ont., which has hitherto been controlled by United States interests, has been purchased by James Whalen, Port Arthur, Ont., and John Burnham, Chicago, Ill., and will in future be operated under the direct management of the former.

It is the most modern and best equipped shipbuilding plant on the Great Lakes, including a solid concrete dry dock over 700 ft. long. Though only established a few years it has achieved signal success in the construction of lake vessels of the most modern type.

Additional berths are being installed to allow of the construction of four vessels at one time, and a permanent organization will be maintained at all times for vessel building, and also for building on owners' account should necessity arise.

BUILDERS OF THE

s.s. NORONIC

The finest passenger steamship and the
on the Great Lakes.

s.s. W. GRANT MORDEN

The largest bulk freighter in the
world.

Your Cars Demand the Best

When contracting for new cars, or repairing those in use, it will pay you to investigate the merits, and place a trial order for

REG. U. S. PAT. OFF.

It is made to stand hard service, and is neat and attractive. Years of experimentation have resulted in giving Railroad Men a material which is a most satisfactory and serviceable covering for car seats.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

meet every condition.

Neither do they corrode at the terminals.

The Electric Railway Improvement Co.

Cleveland, Ohio

Nova Scotia Steel & Coal Company

LIMITED

Manufacturers of Steel for Shrapnel Shells and Admiralty Forgings | Only Company in Canada producing Steel Ingots by the "Harmet" liquid process

Can supply Forgings up to 40 Tons in weight to all Admiralty and Lloyd's Tests and Specifications

FORGING A RUDDER FRAME

Why "Harmet" Liquid Process Steel Ingots are Superior to Ordinary Steel Ingots:—

1. Prevention of cracks due to shrinkage; of internal stresses and resulting cracks and fissures.
2. Early cessation in the crystallization of the metal, and the production of fine crystallization without cleavage planes.
3. Lessening of segregation, i.e., reduction of tendency of carbon and other impurities to concentrate in the central and upper parts of the ingot.
4. Prevention of "pipes" or interior cavities, and thus preservation of absolute solidity in the ingot.
5. Improvement in physical properties.
6. Reduction in waste of ingot.

OUR modern Steam Hydraulic Forge Shop at New Glasgow, N.S., part of which is shown above, and our large Steel Plant at Sydney Mines, N.S., equal the very best in America.

On the shortest notice, we can supply forgings of all shapes and sizes, made of ordinary or "Harmet" fluid compressed open-hearth steel, and satisfying the most severe specifications.

Our forges are modern in every respect—designed and installed after close study of the latest developments in all countries. Moreover, we produce the highest grades of steel by the most approved methods. It has always been the policy of "Scotia" to hold a position in the front rank of trade, and by the recent additions to plant, this policy has been maintained in a practical manner, bringing "Scotia's" equipment abreast of the best foreign forges.

For prices and full particulars, write to

Head Office, NEW GLASGOW, N.S.

Western Sales Office, Room 14, Windsor Hotel, Montreal

ONE OF 2,000 GONDOLA CARS NOW UNDER CONSTRUCTION FOR THE FRENCH GOVERNMENT.

FREIGHT CARS TO FOREIGN ORDER

We have unexcelled water and rail shipping facilities for the export of freight cars of all types abroad or to United States markets. Our manufacturing capacity reaches to 40 cars per day. Although fully employed in filling and conducting negotiations for further foreign orders, our exceptional output facilities enable us both to take care of these and others in the order in which they are received.

75 TON SPECIAL PIT CAR FOR CANADIAN GOVERNMENT RAILWAYS.

FLAT CARS, CABOOSES, AND MINE CARS

We make a specialty of Flat Cars, Caboose and Mine Cars for both Home and Foreign Markets in Wood, Steel Frame or "All-Steel" and shall be pleased to quote against all capacity requirements and quantities.
